DESCRIPTORS *College Faculty; College Transfer Students; Community Colleges; *Enrollment Trends; Full Time Equivalency; School Demography; School Statistics; State Aid; State Surveys; *Student Characteristics; Tables (Data); Technical Institutes; Two Year Colleges; *Two Year College Students, Vocational Education; Vocational Schools

IDENTIFIERS *Washington

ABSTRACT

A statistical overview is provided of trends in enrollments, student characteristics, and staffing in Washington's community and technical colleges as of fall 1994. The report first examines patterns of enrollments by funding source for full-time equivalent and headcount enrollment, the changing enrollment mix, student purpose of attendance, part- and full-time status, planned length of attendance, and the impact of tuition waivers. Next, the demographics of students served are detailed from fall 1990 through fall 1994 and data on student progress and success is presented for 1990-91 through 1993-94. Following an analysis of courses offered from fall 1990 through fall 1994, information on staff characteristics is provided from 1990 to 1994. Finally, data on enrollment, funding sources, and student characteristics are presented for 24 community colleges and college districts and 5 technical colleges for fall 1993 and fall 1994. Highlighted findings include the following: (1) the Washington community and technical colleges served 229,978 students in fall 1994; (2) the racial composition of the fall 1994 student population was more diverse than in the state as a whole, with 21% students of color in the system; (3) 51% of the students were enrolled full-time; (4) 26% of students were starting college for the first time; (5) 55% of all instruction was provided by full-time faculty in fall 1994; and (6) the Washington colleges served 127,969 full-time equivalency students in Fall 1994, an increase of 4.4% over the previous year. HIGHLIGHTS OF FALL 1994

- The Washington community and technical colleges provided 127,969 FTEs (full-time equivalent students) in fall 1994, an increase of 4.4 percent over fall 1993. State funding along with tuition charges supported 82 percent of the FTEs.
- The Washington community and technical colleges served 229,978 individuals in fall 1994.
- A slight majority (51 percent) of all students were enrolled full-time (200 hours or 10 credits or more). Nationwide full-time students represent 34 percent of the total enrollments.
- Forty-six percent of state and contract FTEs were generated by students enrolled for workforce training purposes, 40 percent by students preparing for transfer, 3 percent by students with an end goal of literacy or English as a Second Language training and 10 percent by students for consumer homemaking or unspecified purposes. These proportions are basically unchanged from fall 1993. However, the type of workforce training students changed, with fewer working people entering to improve skills and substantially more unemployed individuals enrolling to prepare for a new job.
- The racial composition of the student population in fall 1994 was more diverse than that of the state as a whole (21 percent students of color at community and technical colleges, approximately 15 percent in the state population). Students of color were 17 percent of total enrollment in academic and vocational courses and 54 percent in basic skills (ABE/ESL) courses.
- The proportion of the student population which was female (57 percent of those reporting gender) was higher than the proportion female in the state's population as is typical of community and technical colleges nationally. The median age of students was 27.4 years, down from 27.8 years in 1993.
- Of the fall 1994 students, 26 percent were starting college for the first time. The number of new students has been declining for the past decade. Some potential new students with tentative or part-time educational plans found appropriate courses already filled when they attempted to enroll.
- Full-time faculty provide fifty-five percent of all instruction in fall 1994.
- Special program enrollments include 5,339 high school students in the Running Start program and 6,544 unemployed workers enrolled in programs funded by the Workforce Employment Training Act and ESHB 1988.

INTRODUCTION

THE REPORT

The Fall Enrollment and Staffing Report 1994 provides a snapshot of enrollments in technical and community colleges during fall quarter 1994. The report also provides five year trend data for the community colleges and two to three years of data for the community and technical college system.. Because community and technical colleges were only recently merged into a single system (fall 1991), five year trend data for the entire system is not available at this time. In addition to analysis of the system as a whole, this report includes an extensive set of tables by college starting on page 45. The report addresses the questions most commonly raised regarding the community and technical colleges in Washington.

The primary source of information for this document is the State Board for Community and Technical College's (SBCTC) Management Information System (MIS).

THE WASHINGTON COMMUNITY AND TECHNICAL COLLEGE SYSTEM

Washington's Community and Technical College Act of 1991 provides for a state system of community and technical colleges separate from both the public secondary schools and four-year institutions. The act requires that the colleges "offer an open door to every citizen, regardless of his or her academic background or experiences, at a cost normally within his or her economic means" (RCW 28B.50.020(1)).

Each college district is required to "offer thoroughly comprehensive educational, training and service programs to meet the needs of both the communities and students served by combining, with equal emphasis, high standards of excellence in academic transfer courses; realistic and practical courses in occupational education, both graded and ungraded; community services of an educational, cultural and recreational nature; and adult education" (RCW 28B.50.020(2)). College districts containing only technical colleges are exempted from the requirement to offer academic transfer courses. Each college is governed by a board of five trustees appointed to five-year terms by the governor with the consent of the Senate.

Washington's first junior college was started in 1915 in Everett when 42 students began a one-year college program on the top floor of Everett High School. It was closed in 1923 for lack of students. Centralia College, the state's oldest existing community college, opened in 1925. It was followed by Skagit Valley College in 1926, Yakima Valley College in 1928 and Grays Harbor College in 1930. By 1941 eight junior colleges were operating in Washington, all locally administered and locally funded. Combined enrollment was approximately 1,000.

Meanwhile, in 1930 the Seattle School District opened Edison Vocational School, the first true, public vocational school in the state. The Spokane School District followed suit in 1939 with establishment of the Spokane Trade School. Both schools eventually became community colleges. The oldest existing vocational technical institute, Tacoma's Bates VTI, opened in 1940. Subsequently, VTIs opened in Clover Park, Pasco, Renton, Vancouver, Kirkland (Lake Washington), Olympia and Bellingham. The VTIs in Pasco, Spokane, Vancouver, and Olympia eventually became community colleges.

Between 1925 and 1941, there were three attempts to provide state support for junior colleges. State support was provided for the first time by the 1941 Legislature; however, that act restricted the number and location of junior colleges, prohibiting their establishment in counties having either a public or private four year institution. In 1945, junior colleges were made a part of their local school districts and supported through their funding, as was the case with vocational technical institutes until 1991.

In 1961, the restrictions against expansion of community colleges were removed by the legislature and junior colleges were designated as "community" colleges. This term had first appeared in a report to President Harry Truman from his Commission on Higher Education in 1947.

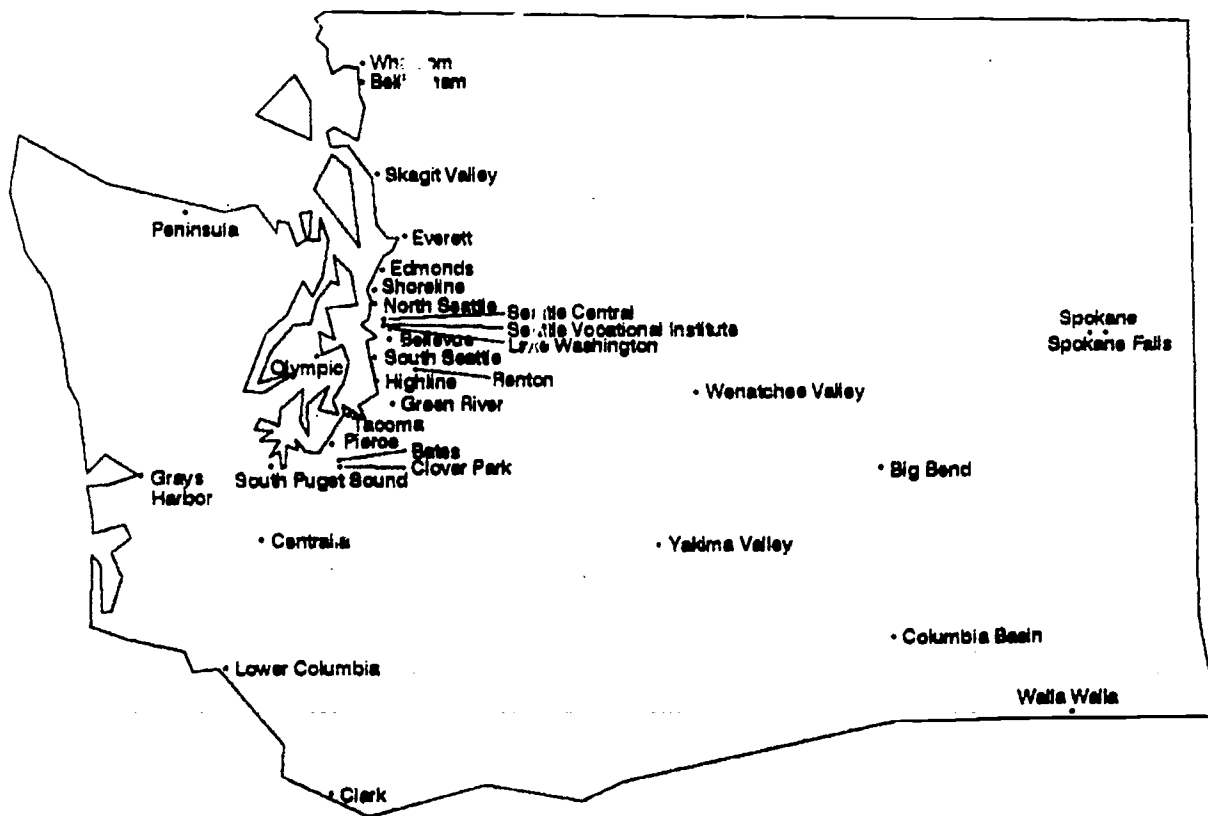

The financing of community colleges was separated from that of local school districts in 1963, and in 1965 the legislature declared that it intended to establish a separate, independent community college system. Based on the recommendations of the Arthur D. Little Company, the 1967 Legislature adopted the Community College Act of 1967, which was signed on April 3 of that year.

The structure of the community college system remained largely intact until 1991 when, as part of the Work Force Training and Education Act, the legislature amended the Community College Act of 1967 and redesignated it as the Community and Technical College Act of 1991.

The state's five remaining public vocational technical institutes were designated as "technical colleges," removed from the jurisdiction of their local school districts, and merged with the community college system. Each technical college was provided with its own college district and a board of trustees. Each technical college district overlaps the districts of neighboring community colleges. The State Board for Community College Education was renamed the State Board for Community and Technical Colleges by the 1991 act and its scope was expanded to include all adult education.

The Community and Technical College Act of 1991 also brought the Seattle Vocational Institute (SVI) into the Seattle Community College District. It had been the Washington Institute of Applied Technology since 1987 when it was established by the legislature in a facility previously occupied by the Seattle Occupational Industrialization Center before it closed. SVI serves economically disadvantaged people in Seattle's Central district, providing job-related training for adults and contract training for local businesses.

WASHINGTON COMMUNITY AND TECHNICAL COLLEGES

ENROLLMENTS

9

**FTES BY FUNDING SOURCE
TECHNICAL AND COMMUNITY COLLEGES
FALL 1990 THROUGH 1994**

In fall 1994, full-time equivalent (FTE) enrollment was 127,969. A quarterly FTE is equal to 15 credits at a community college and 300 hours of class at a technical college. In community colleges the FTE reached its highest level ever - 115,311 - 4.9 percent more FTE than in fall 1993.

Courses funded through state support and tuition are regarded as state supported. When students, employers or social service agencies pay for the tuition in a state supported course, they are paying for 29 percent of the cost at community colleges and about 22 percent of the cost at a technical college. State appropriations to State Board for Community and Technical Colleges (SBCTC) cover the major cost of a fixed number of FTEs in the community and technical college system. SBCTC then distributes funding for those FTE targets and funds on an equitable basis to each college. In fall 1994, state support included 500 timber FTEs and 5,000 Workforce Training Trust Fund (ESHB 1988) FTEs.

State FTEs above the appropriated number are provided by the college as "excess" enrollment. That is, colleges rely only on the tuition income to cover costs of such additional instruction. The number of excess enrollment FTEs has declined as colleges have received additional funding to serve their communities.

Source: SBCTC Course MIS:SR2101, Version 1.

Note: Totals may not add due to rounding. Seattle Vocational Institute included in community college totals as of fall 1992. Contract totals include counts for Running Start students and, as of fall 1994, international contract students.

Enrollments which are not partially supported by state appropriation are regarded as either contract or student funded.

Contract funded courses. About 60 percent of contract supported courses are paid for by an enterprise such as an employer or social service agency for the benefit of its employees or clients. Colleges offer contracted instruction for the U.S. military and Washington Department of Corrections at its major correctional facilities. Colleges contract with social service agencies to provide their clients with job training or basic skills education. Colleges also contract directly with employers to meet the customized training needs of employers. For example, colleges provided contract instruction for Weyerhaeuser, Kaiser Aluminum, Marine Hardware Inc., Paccar, Inc., Safeco Insurance Company, Westinghouse Hanford and Sharp Microelectronics. There was no growth in the number of contracts of this type from last year to this year.

About 40 percent of contract enrollment stems from two special programs. The Running Start program allows high school students to simultaneously earn high school and tuition-free college credit. This program was implemented throughout the state in fall 1992. It has doubled in size since that time and accounts for all of the real growth in contract enrollments between 1993 and 1994. In fall 1994 there were 3,775 such FTEs for 5,334 students compared to 2,614 FTE and 3,682 students in fall 1993. The second program has been ongoing at the colleges, but enrollments for the program have not previously been reported. The program is called International Contract enrollments. Several organizations contract with colleges to provide instruction for international students. These organizations fund the full cost of such instruction. Counts for these 3,166 "international contract" students (3,073 FTEs) are included for the first time in fall 1994.

Student funded class costs are paid entirely by the individuals who enroll. Student funded offerings include avocational courses such as foreign language for travelers and workforce training related courses such as microcomputer applications. Student funded FTEs grew in 1994 compared to a year earlier, but were lower than in years past.

Prior to 1991, certain enrollments had been included in the contract- or student-funded category which were subsequently reported as state supported. The substantial decline in contract supported FTEs between 1990 and 1991 was entirely due to this reporting change.

Growing Enrollment Demand: External forces impact the demand for community and technical college education. Recently enrollment demand has been growing at a rate in excess of the growth in the adult population as a result of the following external demands:

- The Baby Boom Echo has reached the college age. The number of 17-18 years olds in Washington's population increased by 3 percent over the past year. These young people are the ones most likely to enroll in college, thus changes in the size of this age group has more impact on colleges than changes in any other age group.
- There is an increasing need to retrain workers, especially those who lose their jobs. The state of Washington is experiencing a major restructuring of critical industries, including timber and aerospace, which permanently displaces workers. Many of those displaced require retraining if they hope to become re-employed in occupations paying at or near their previous salaries. The state has earmarked FTEs to serve the needs of the unemployed with special emphasis on timber and other dislocated workers.
- Increasing participation in the Running Start program.
- Increased participation from the Baby Bust group. The Baby Bust group is now 19 to 29 years of age. While the number of adults in that age group is smaller than at any time in recent history, people in that age group participate in college at high rates. More young adults opt for the community college as the road to the bachelor's degree. Others attend community or technical colleges to improve their job opportunities.

For data by college, see pages 45 - 46.

**STUDENTS BY FUNDING SOURCE
FALL 1990 THROUGH FALL 1994**

About six percent of Washington adults or 229,978 students were enrolled in the community and technical colleges in fall 1994. That represents a 1.6 percent headcount increase over fall 1993. The increase was due to growth in student funded enrollments, an additional 1,652 Running Start students and initiation of reporting of "contract international" students. Shifts in the types of students served has resulted in a decline of the ratio of students per FTE (more full-time students) and in the number of students who were new to college. Given limited funding and this shift in the type of student served to fewer part-time students, there were some 4,800 fewer students served in community colleges in fall 1994 than in fall 1980, the previous record high service level.

Source: SBCTC Student MIS:SR1101, Version 1. New Students - Data Express Procedure SR93-39394.

Note: Seattle Vocational Institute included in community college data starting in fall 1992. Running Start included as of fall 1991. International contract students included as of fall 1994.

For headcount data by college, see pages 47 - 50.

CHANGING ENROLLMENT MIX

Fall 1994 data on enrollments and students reveal expansion of the community and technical college system with emphasis on each of the mission areas - workforce training, transfer and basic skills. The data also reveal that as the system grows, significant shifts are occurring with less emphasis on upgrading those currently employed and more emphasis on retraining for the unemployed and preparing students for transfer.

In fall 1994 the colleges served fewer older, working, part-time students than in the past. Notably the system served:

- 4,400 fewer part-time students,
- 1,000 fewer full-time workers, and
- 2,000 fewer students aged 30-39, than in fall 1993.

The drop in older students is particularly noteworthy in that the population is growing in that age group.

These students were all replaced, but by a very different kind of student - a student enrolled full-time, and though some were older individuals, they were on average younger than the population that had been served the year before. In fall 1994 the system served:

- 6,600 more unemployed workers who were seeking work (primarily due to EHSB 1988),
- 1,700 more Running Start students,
- 1,300 more full-time students, and
- 1,000 more recent high school graduates than in fall 1993.

State supported headcount declined by nearly 3,000 students, but because more of the state supported students enrolled full-time, state FTE increased. Contract FTEs grew because of the Running Start program. These shifts result in part from policy changes and changes in the age pattern of the population. ESHB 1988 and Running Start are two policy changes which resulted in increased full-time enrollments and changes in the age pattern of the population. Population changes have resulted in a smaller number of people aged 19 to 29 than at any time in the past decade. This population change has impacted the nature of enrollment demand. At the same time there were more people in the 18 year old age group in the state population than in the past. Growth in that youngest college-going age group has increased demand for full-time enrollment. There will be continuing growth in the younger age group in the future.

In addition to these shifts, the numbers reported in fall 1994 include some 3,600 international students who have been served by the college in the past but not previously reported. These students pay for the full cost of instruction and are counted as contract funded students. Their enrollment does not displace resident students. The change created by including these students in fall 1994 counts have been excluded from the analysis above.

**STUDENTS BY PURPOSE FOR ATTENDING
FALL 1994**

Students enroll for many purposes. In fall 1994 more than 63,800 students were enrolled with the goal of transfer to a four-year institution. Transfer-bound students were typically young (median age 22) and enrolled full-time (74 percent). About 45 percent of new transfer students plan to complete a degree before transfer. More than 91,600 students were enrolled for workforce training. Of these, a little over half were enrolled to prepare for a job or job change, while nearly half were upgrading current job skills. Workforce training students were older (median age 28) and 51 percent were enrolled full-time. More than half of all workforce students were females (57 percent).

While the growth rate for transfer students has been substantially higher than for workforce training students over the past four years, the numbers of both types of students grew at an equal rate this past year. About 16 percent of workforce training and transfer students were also enrolled in developmental courses to improve their math, reading, writing or study skills. The 9,061 developmental FTE are included in the transfer and workforce FTEs below. See page 31 for developmental FTEs by major area.

While the colleges provide more than 13,800 FTEs in basic skills courses (see page 30), less than a third of that effort (30 percent) was for students enrolled in ABE, ESL, GED or high school completion courses as their final goal. Most students in basic skills classes enroll for the purpose of preparing for jobs or transfer and are thus counted in those numbers. Basic skills students were older than transfer students, but younger than workforce training students. They tended to be enrolled part-time.

Some 34,500 students did not specify a goal when they enrolled, enrolled to prepare for retirement or to develop parenting and consumer homemaking skills (home and family life).

**FULL-TIME AND PART-TIME STATUS
COMMUNITY AND TECHNICAL COLLEGES
FALL 1990 THROUGH FALL 1994**

The slight majority (51 percent) of community and technical college students were enrolled on a full-time basis. Having more full-time than part-time students is substantially different than the pattern for two year colleges nationwide where only 34 percent of students are enrolled full-time. Nationally community and technical colleges are able to serve more part-time students who are working or managing a home full-time and taking classes on an occasional basis. One of the most significant changes in the Washington community and technical college population over the past several years is the increasing enrollment of Running Start students who were two-thirds enrolled full-time, and the Workforce Training Trust Fund where three-quarters took full loads. All but a few of the 3,166 contract international students who were included in these counts for the first time in 1994 were enrolled full time. The change also has occurred because there are fewer adults in the population in the age group which enrolls part-time and those who would have enrolled part-time could not find classes available to meet their needs.

In fall 1994, part-time student numbers declined for the second consecutive year while full-time enrollments grew more than six percent. Over the past three years the number of part-time students served by the colleges has declined by 12,500 people, a decline of 6 percent. Full-time students were those enrolled in 10 or more credits at community colleges or 200 or more hours at technical colleges during the quarter. It takes a little more than one full-time student to equal one FTE (15 credits or 300 quarterly hours of study). It typically takes four part-time students to equal one FTE.

Note: Due to the method of counting FTEs per student in variable credit courses, total FTEs are 52 different than elsewhere in the report. Seattle Vocational Institute included in community college data starting in fall 1992. Running Start students included starting in fall 1993. International contract students included as of fall 1994.

For full-time/part-time data by college, see page 53.

**NEW STUDENTS BY PLANNED LENGTH OF ATTENDANCE
FALL 1994**

Each fall about 68,500 students enter their college as students new to college or as transfers. The enrollment plans of these students vary greatly, but as enrollment demand outstrips resources, the students able to find space at the college have become more traditional. Nearly a third of all new college students enrolled for the purpose of obtaining a degree (32 percent) and a smaller portion enrolled for one or two quarters (13 percent).

In fall 1994, 13 percent of the students who responded at registration time to the question about their planned length of attendance reported they planned to enroll at the college for more than a year but not for a degree, perhaps planning a certificate or classes needed for transfer. About 11 percent reported they planned to stay at the college for a single year. About 22 percent of students reported being uncertain about their length of attendance.

Colleges look to different indicators of student success depending on the student's reported planned length of attendance. Retention is not an issue for those who plan to enroll for a single quarter, but is a useful indicator of success for those with long-term plans. For more information on retention of degree seeking students, see pages 23-24.

ENROLLMENT IMPACT OF TUITION WAIVERS

The 1992 Legislature directed the State Board to "reduce the amount of operating fee foregone revenue from tuition waivers by 6.6 percent..." As a consequence, the Board was obligated, in April 1992, to increase the community college tuition rate for specific "ungraded courses" (courses whose intent is other than for credit toward a degree or certificate program). Charges were increased for parent education courses, apprenticeship training, industrial first aid, retirement, GED preparation, medical emergency technician, farm and small business management and journey¹ person training. The 1993 Legislature directed that all tuition revenues be treated as local funds rather than reverting to the state as they had for community colleges in the past. There has been speculation that colleges may be unwilling to forego tuition income under the "ungraded" programs and may opt to offer fewer such courses.

There were enrollment declines in most "ungraded" courses. Declines were generally consistent with a longer-term trend of declining enrollments or offerings and may not have been due to the increased charges or decision regarding foregone tuition revenue. Some of the increases reflect the addition of new courses to meet the need for training programs for the unemployed worker.

**STUDENTS
SERVED:
DEMOGRAPHICS**

**DEMOGRAPHICS OF STUDENTS SERVED
FALL 1990 THROUGH FALL 1994**

The typical community and technical college student in fall 1994 was a white woman in her late 20's. She enrolled full-time in daytime courses on the college central campus. Quite likely she had no children at home, though many attending classes with her did (about a third) and was working while attending school. She was enrolled for the second year at her college, but had no experience in a college setting before starting last year.

Male/Female: As in colleges across the nation, the majority of students served in Washington community and technical colleges were women. In fall 1994, 57 percent of all students in Washington community and technical colleges were female. Nationwide the rate for two-year colleges was 58 percent female in 1993. The ratio of men and women has remained fairly constant in community colleges over the past several years.

STATE AND CONTRACT STUDENTS IN FALL

Note: Unreported students were prorated.

Students with Disabilities: Community and technical colleges served more than 7,700 disabled students in fall 1994 or 3.9 percent of all students. Service to disabled students has grown modestly. An estimated nine percent of adults in Washington have physical, mental or other health conditions that keep them from participating fully in work, school, housework or other activities (Washington Adult Literacy Survey, 1993). Colleges offer special services to assure that disabled students are able to participate in college-level training. The majority of disabled students (54 percent) enrolled for job related purposes and 24 percent were preparing for transfer.

**DEMOGRAPHICS OF STUDENTS SERVED
FALL 1993 THROUGH FALL 1994**

The large group of Asian/Pacific Islanders enrolled in the colleges have many different race backgrounds. Data show that the largest enrollments are students with Vietnamese, Chinese, Filipino, Korean, and Japanese backgrounds. Asian Indians, Cambodians and Laotians were among the largest "other Asians" with several hundred students from each group.

**STATE AND CONTRACT SUPPORTED, FALL
EXCLUDING INTERNATIONAL STUDENTS**

Background (Census Code)	COMMUNITY COLLEGES			TECHNICAL & COMMUNITY COLLEGES		
	1992	1993	1994	1993	1994	% Change
Vietnamese (619)	3,067	3,783	4,225	4,001	4,627	16%

Source: SMIS Database, Data Express Procedure SR 94-15.

Students of color are not equally distributed in all course areas offered by the colleges. High numbers of Asian/Pacific Islanders and Hispanic students were enrolled in basic skills classes. Whites were represented in academic and vocational classes at much higher rates than in basic skills classes. Hispanics are under-represented in academic and vocational areas. The community and technical college system has established a goal of increasing the participation of Hispanics in academic and vocational courses such that representation of Hispanics in such courses is similar to the population in general.

**DEMOGRAPHICS OF STUDENTS SERVED
FALL 1990 THROUGH FALL 1994**

Age: Because of the shifts in student enrollments described on page 4, the student age profile in fall 1994 was younger than the profile of 1990 despite aging of the state's population. Despite declines over the past five years in the state population under the age of 30, most of the five year enrollment growth was among those under 30 years of age. This growth is primarily due to ESHB 1988 and Running Start and greater participation among those in their early twenties. The 1990 to 1994 comparison shows declines for 19 year olds, and increases for 17 year olds and those in their mid-twenties.

Note: Students with unreported date of birth are prorated into age groups. No date of birth was reported for 5,782 students.

* Median age: Half of all students are older and half younger than the median age.

For data on median age by college, see page 63.

DEMOGRAPHICS OF STUDENTS SERVED FALL 1993 THROUGH FALL 1994

Educational Background: Washington community and technical colleges serve adults in the state who have less than a high school diploma in about the same proportion as in their representation in the state (17 percent at the colleges, 17 percent in the adult population). Included in this service is enrollment of 5,334 Running Start students - those still in high school who take college-level courses to meet both college and high school requirements. Several colleges also contract with school districts to provide high school academies, high school programs offered on the college campus. Some students in the high school academies are included in this report. Adults with less than high school education may enroll in Adult Basic Education courses, courses leading to the high school diploma or GED certificate, or, if they have the requisite skills, in college-level classes.

Those with high school diplomas but no education beyond the diploma are enrolled in colleges at considerably higher rates than their level in the general adult population (37 percent at colleges versus 28 percent in adult population). The colleges serve those with some college or with degrees at lower rates than their representation in the population (8 percent of students enrolled had an associate degree or higher versus 23 percent of adult population).

Family Status: More than a third (37 percent) of all fall quarter 1994 students were parents. Twelve percent of those enrolled were single parents. Two-thirds of the enrolled single parents were recipients of public assistance.

In the state about 20 percent of all parents are single parents and that number is expected to increase to 23 percent over the next decade.

For data on educational background and family status by college, see pages 64 - 66.

DEMOGRAPHICS OF STUDENTS SERVED FALL 1993 THROUGH FALL 1994

Employment Status: The slight majority (51 percent) of all students worked full-time or part-time while taking classes. That is a decline from 1990 when 70 percent of all students were working. This figure is somewhat below the national average of 63 percent of all college (two-year and four-year) students working. Colleges have a high level of participation from unemployed workers. In fall 1994, about seven percent of adults in Washington were unemployed compared to 17 percent of enrollments at the colleges being unemployed. Some of the unemployed were served in specially funded programs which accounted for the growth in this area. Most unemployed persons, however, enroll on their own, using federal and state financial aid programs to fund their education whenever possible. No doubt, when jobs become available, some of these unemployed people leave before completing classes.

Part-time workers and the unemployed participate in the community and technical colleges at higher rates than full-time workers or those out of the labor force.

Public Assistance: About seven percent of the adults in Washington receive public assistance in the form of AFDC payments according to the Washington Adult Literacy Survey recently conducted by the Educational Testing Service. Welfare participants are more likely than others to participate in college. About 10 percent of the community and technical college students or 19,800 students also receive welfare payments. About half the enrolled welfare recipients were full-time homemakers and thus not in the labor force. In fact, about half of those reporting themselves to be homemakers were welfare recipients. About 20 percent of welfare recipients worked while enrolled at the college.

For data on employment status by college, see pages 67 - 68.

**OUTCOMES
COMMUNITY AND TECHNICAL COLLEGES**

Outcomes: Each year about 13,000 former community and technical college students step into training related jobs and more than 12,000 transfer to four-year institutions. Colleges also assist thousands of adults to complete high school or the General Education Development (GED) certificate.

Community colleges award an associates of arts degree that serves as preparation for transfer or as recognition of two years of general education. Community and technical colleges award associate degrees in applied technologies in several hundred programs as preparation for technical and paraprofessional positions.

Community and technical colleges award certificates in a variety of specific job related programs. Certificate programs range in length from several weeks to more than two years.

Status After College: After they leave the college, program graduates are quite successful in obtaining high paying jobs or transferring to four-year institutions. Nearly 13,000 graduates and students who leave vocational programs before graduation obtain jobs in their career fields.

Educational Outcomes Community and Technical Colleges	
	Number of Awards <u>1993-94</u>
High School Diplomas (1992-93)	1,333
GED Certificates	9,629
Academic Degrees	11,754
Vocational Degrees	5,679
Vocational Certificates	7,610

**AFTER LEAVING COLLEGE
JOB PREPARATORY STUDENTS**

	Class of 90-91	Class of 91-92	Class of 92-93
Graduates Employed in Career Field	8,395	7,367	7,655
Median Wage of Graduates in Career Field (\$ 1994)	\$10.21	\$10.21	\$10.00
Others Leaving for Employment in Career Field	4,582	4,962	5,156
Median Wage of Others in Career Field (\$1994)	\$8.50	\$8.37	\$8.14
Apprentice Employed in Career Field	NA	NA	385
Median Wage of Apprentice in Career Field	NA	NA	\$21.23

The decline in graduates from 1990-91 to 1991-92 was due to changes in the reporting of certificate awards at technical colleges.

More than 12,000 students transfer each year. About half of all transfers had completed the associate degree prior to transfer. Two thirds transfer with the degree or 90 credits.

ACCEPTED AS TRANSFER

	Class of 91-92	Class of 92-93	Class of 93-94
At Public Four Year Institutions	7,557	8,770	10,308
At Independent Four Year Colleges (estimate based on fall data)	1,850	2,200	1,900
Portland State and Military Bases (estimate)	211	250	222
Total Transfers	9,918	11,150	12,430

26

For data on employment and transfer by college, see pages 69 - 70.

Graduation: While degrees and certificates are only one of many indicators of positive completion from the community and technical colleges and are the goal of only about a third of all students, they do represent a type of completion which can be readily examined over time.

Community and technical colleges have increased the number of degrees being awarded over the past three years. Academic degrees which prepare students for transfer have increased by 51 percent in the past five years at community colleges; vocational degrees have increased by 13 percent in the past three years. The number of certificates have increased 15 percent at community colleges and declined significantly at technical colleges as programs were adjusted to reflect the post-secondary outcomes.

Source: SBCTC Completions File, Report SR5107 (College Job Number SR5307J).

As the number of degrees and certificates awarded has grown, there has been a growth in diversity of the students who graduate. Women have fairly consistently earned about 58 percent of all degrees. Men earn a larger share of the certificates today than in the past. At the technical colleges, certificates are awarded in equal numbers to men and women.

Women and students with disabilities are represented among the graduates at higher rates than their numbers in the student body three years earlier. As in the past, the percentages of the 1993-94 awards going to students of color were lower than three years earlier. For community colleges the student body in fall 1991 was 18.9 percent students of color - a 5.2 percent gap compared to the degree numbers in 1993-94. Closing the gap is a goal of the colleges and the State Board for Community and Technical Colleges.

For data on graduation by college, see pages 71 - 72.

STUDENT PROGRESS COMMUNITY AND TECHNICAL COLLEGES

To account for stop-out patterns and the diversity of student objectives, SBCTC uses as a measure of student retention the progress made by the sub-group of students who enroll for the purpose of obtaining an associate degree¹. SBCTC measures degree-seeking student progress by the number of quarters enrolled over a two year period:

Substantial Progress: Students with degree plans graduating or attending four or more quarters over the two year period.

Some Progress: Students with degree plans attending two or three quarters over the two year period.

Early Leavers: Students with degree plans attending only the first quarter and not returning in two years time.

Student progress patterns have remained relatively unchanged when comparing the cohort of students with degree plans who started toward their degree between fall 1991 and 1992. Degree-oriented students enrolled full-time were much more likely to stay at the college for four or more quarters over two years than were degree-seeking part-time students. Typically a student must enroll for six or more quarters to complete the degree.

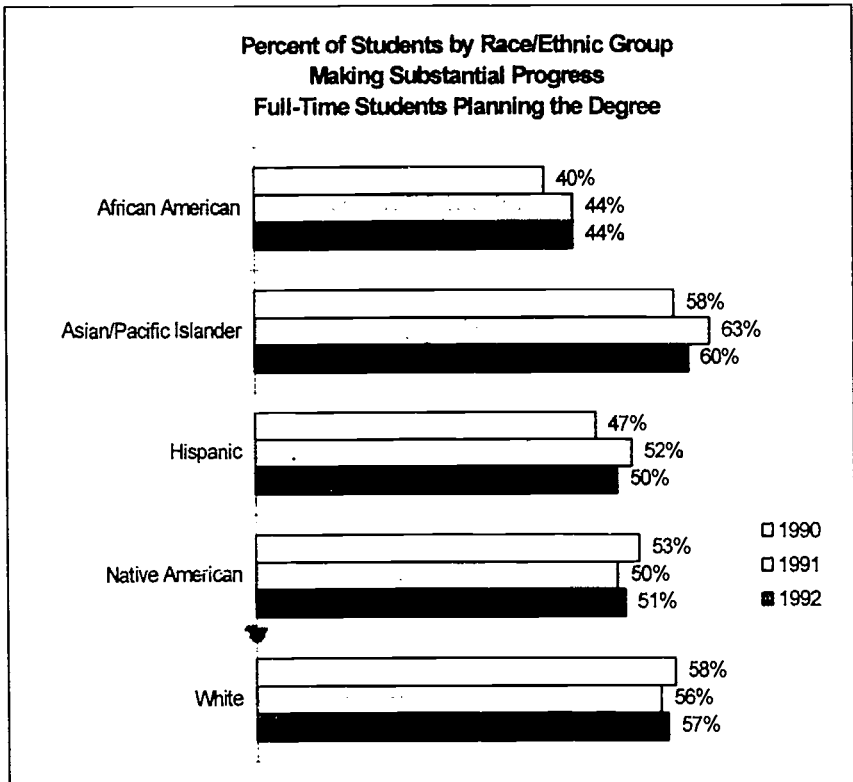

Source: SR1182 (College Job Number SR1382J). Student Planned Length of Attendance = Degree (15). State and contract students.

¹ One third of all new students (41 percent of full-time and 18 percent of part-time students) enroll with the intent of completing an associate degree (job preparatory or transfer degree) at their college.

STUDENT PROGRESS COMMUNITY AND TECHNICAL COLLEGES

With the exception of Asian Americans, students of color with degree plans were less likely to make substantial progress toward their goal than were white students. Community and technical colleges are directing substantial efforts toward increasing the retention of all students, with special emphasis on improvements for students of color.

Except for Native American students, there has been some improvement in the progress made by students of color. The data in these charts are for full-time students only. The pattern for part-time students of color generally follows the same trend; however, the rates show considerable more volatility than the rates for full-time students.

Source: SR1182 (College Job Number SR1382J). Planned length of attendance equal degree (15). State and contract students.

Source: SBCTC Student MIS:SR1182, for state and contract students planning to complete a degree at their college.

Note: Totals may not add to 100 percent due to rounding.

Students who enrolled in developmental courses progressed as well as those who started without taking such classes. For purposes of accurate comparison, the data below track only full-time students, though the pattern holds as well for part-time students.

**Progress of Students Planning a Degree Two Years After Entering the Community College
Students Starting Fall 1992**

	Substantial Progress	Some Progress	Early Leaver
Full-Time			
Took Developmental First Quarter	57%	29%	14%
Did Not Take Developmental First Quarter	57%	28%	15%

Source: SR1182 and SR1183.

In fall 1991 in the community colleges there were 3,269 new full-time students planning a degree who took developmental courses. There were 5,880 new full-time students planning degrees who did not enroll in developmental courses.

For data on student progress by college, see pages 73 - 75.

COURSES

OFFERED

**FTES BY ACADEMIC, VOCATIONAL, BASIC SKILLS AND DEVELOPMENTAL
FALL 1990 THROUGH FALL 1994**

The community and technical colleges devoted 38 percent of their course effort (as measured by FTEs) to vocational courses, 44 percent to academic courses, 11 percent to basic skills, and 7 percent to developmental courses.

The colleges have been able to increase their course offerings as they have been allocated more state funds and contracted more classes with employers, government agencies and under the Running Start program. The rate of growth in community colleges has been different for the three major course areas. Academic courses grew 21 percent over the past five years. Developmental courses grew 23 percent. Basic skills grew 32 percent with much of that growth in the past two years in English as a second language courses and career exploration courses for those with less than a high school education. Some of the academic course growth was because of the inclusion of contract international students in fall 1994. Their enrollments were excluded from system enrollment reports in earlier years.

As colleges have addressed the growing need for workforce training, vocational course offerings have reversed historic trends and increased for a total growth over the five year period of 6 percent. This lesser growth in vocational FTEs compared to other course areas stems from the high cost of vocational training. Given the level of state funding, colleges have been able to only selectively add new or replace outmoded vocational programs. The inclusion of contract international students in fall 1994 impacted some of the increase in vocational counts, but most was due to services to meet the needs of the unemployed.

Note: Total is 52 higher than reported elsewhere due to the manner in which variable contact hour classes are stored in the SMIS database. Running Start included as of 1993. International contract students included as of 1994. Seattle Vocational Institute included in community college totals starting in fall 1992.

**TYPES OF COURSES OFFERED
COMMUNITY AND TECHNICAL COLLEGES
FALL 1990 THROUGH FALL 1994**

BASIC SKILLS: Pre-college instruction is offered in the five different areas shown in the pie chart. Adult Basic Education (ABE), which serve the needs of adults with low literacy skills grew by 60 percent in the community colleges in the past five years. Some of the growth reflects a move by colleges to offer GED within ABE courses.

ESL classes provide training for those with limited English and has grown the most (66 percent) in community colleges in the past five years. Hispanic and Asian immigrants comprise 70 percent of those enrolled.

GED classes prepare students to take the General Education Development (GED) certificate exam. High school completion courses allow adults to complete courses needed to be awarded a high school diploma. Both programs declined simultaneously with fee increases in 1992.

In an effort to better serve the part of the unemployed population with low educational skills, colleges have recently added career exploration courses, thus increasing the FTE in "other" basic skills areas.

About 60 percent of community college basic skills students were enrolled for the purpose of preparing for transfer or workforce training.

**TYPES OF COURSES OFFERED
COMMUNITY AND TECHNICAL COLLEGES
FALL 1990 THROUGH FALL 1994**

DEVELOPMENTAL: These courses provide reading, writing, math and study skills for those who need to brush up to successfully complete college-level courses. Technical colleges have historically imbedded developmental instruction in vocational courses. They have only recently begun to offer distinct developmental courses. In community colleges, developmental studies have grown substantially (22 percent) in the past five years.

Developmental math courses have been one of the fastest growing areas at the colleges, growing 26 percent in the past five years. Developmental English classes have grown at a somewhat slower pace at 17 percent in five years.

In the colleges, a total of 24,291 students enrolled in developmental courses in fall 1994. That means 12 percent of all students were enrolled in at least one course in developmental studies. Among students new to the college, one in five (18 percent) enrolled in a developmental course during their first quarter. Students planning to complete a degree were most likely to take developmental courses, with 29 percent taking a developmental course in their first quarter.

Those enrolled in developmental courses tend to be enrolled in college-level instruction in other areas with just 45 percent of their load in developmental studies courses.

**TYPES OF COURSES OFFERED
COMMUNITY AND TECHNICAL COLLEGES
FALL 1990 THROUGH FALL 1994**

VOCATIONAL: Vocational courses include those offered to train people for jobs, upgrade current job skills, and meet specialized training requirements of employers. Vocational courses also include consumer homemaking classes such as the parent education program, courses that help students explore their career direction and technical math and English courses. About five percent of the faculty teaching vocational education were funded under the Federal Vocational Education Act.

Training courses were offered in all major occupational categories with the largest FTE enrollment in repair/ machinist and other professional/ technical.

The five year decline in programs in repair/machinists and in managerial courses at the community colleges have been offset by increases in the other areas except for health related occupations. The health related programs tend to be larger every other year as some programs are offered only every other year. There has been substantial growth in the professional technical areas (24 percent over five years) and in support courses (28 percent).

DAY AND EVENING COURSE ENROLLMENTS FALL 1990 THROUGH 1994

Enrollments in day and evening courses have grown over the past five years, but growth was largest in daytime courses. Some 81 percent of FTEs were generated in daytime classes in fall 1994. The legislative authority to increase enrollment levels allowed community colleges to increase their service in the evening in the past few years; however growth of evening enrollment has not kept pace with growth during the day. Growth in 1994 was predominately in daytime enrollments to meet the needs of Running Start students and the unemployed.

Much of the growth in evening courses has been among full-time students enrolled either at night or combining night and day classes. It is likely that many full-time students enrolled in the evening due to the lack of availability of daytime courses.

STAFF

**INTRODUCTION TO PERSONNEL
FALL 1990 THROUGH FALL 1994**

Community and technical colleges employ more than 12,882 faculty and support staff. This section provides details on the characteristics and level of staffing in the colleges.

**NUMBER OF TECHNICAL AND COMMUNITY COLLEGE EMPLOYEES
STATE FUNDED HEADCOUNT**

	1993	1994	% Change
Full-Time Faculty	3,050	3,153	3.4%
Part-Time Faculty	4,936	5,298	7.3%
Classified and Exempt	4,322	4,431	2.5%
Total Staff	12,308	12,882	4.7%

Community and technical colleges hire a diverse staff, reflecting the diverse population served. While faculty and staff ranks do not mirror the race and ethnic background of students, hiring decisions have resulted in increased diversity. Colleges have also increased the percentage of women represented in administrative, faculty and other professional positions on campus.

Note: Percentages may not total 100 due to rounding.

Community colleges employ staff using state funds, moneys from grants, contracts and fees. This report describes only state and contract funded employees. Included in this report are three categories of employees:

- **Classified/technical college support staff:** Civil service employees who work under a set of conditions established by the Higher Education Personnel Board and support staff at technical colleges working under conditions established by college-based negotiations.
- **Administrative/Exempt Professional:** All non-teaching staff exempt from the jurisdiction of the Higher Education Personnel Board civil service system or exempt from college support staff negotiations. This includes the top level administrators, program managers and the secretary to the president or chancellor.
- **Faculty:** Faculty whose main assignment is classroom instruction plus counselors and librarians.

**TEACHING FACULTY
FALL 1992 THROUGH FALL 1994**

Teaching the students in community and technical college state and contract courses required 5,452 full-time equivalent (FTE-F) faculty. One full-time equivalent is a faculty member teaching full-time for the quarter or the combined work of several part-time faculty. A full-time load is defined by each campus and may vary by discipline. Community and technical college faculty FTE-F in state and contract courses grew by 6.0 percent over last year, more than the 4.4 percent growth in FTE students.

Uncertainty about the level of state funding, state budget cuts, and "excess enrollments" resulted in increased use of part-time rather than full-time faculty. If colleges are required to reduce the number of classes offered as a result of reduced state funding, that end is more easily achieved with part-time rather than full-time faculty. In fall 1994, 53 percent of state supported community college instruction was provided by full-time faculty compared to 60 percent five years ago.

For faculty FTE data by college, see pages 80 - 81.

**TEACHING FACULTY BY EMPLOYMENT STATUS
FALL 1993 AND FALL 1994**

In addition to the faculty in the classroom, about 400 FTE faculty are counselors, librarians, or on release from teaching responsibilities for assessment, curriculum development or student services functions.

Part-time faculty FTE-F has grown more rapidly than full-time faculty over the past five years resulting in a decline in the full-time ratio for both state and contract courses. The majority of teachers in courses provided by contract funding were part-time faculty, thus the ratio of full- to part-time faculty for state and contract courses is lower than for state-funded courses only.

Fifty-five percent of state-supported instruction in community and technical colleges was done by full-time faculty under their full-time contract, four percent by those same faculty on moonlight contracts, and 39 percent by faculty teaching on part-time contracts. Contract-supported courses were mostly taught by part-time faculty (61 percent part-time, 2 percent moonlight).

The largest growth in faculty was in basic skills and developmental courses where full-time faculty grew 30 percent and part time faculty 46 percent since fall 1993. In all areas part-time faculty growth outstripped the growth of full-time faculty. The part-time and full-time mix of faculty varied significantly depending on course area.

The majority of instruction in basic skills and developmental courses was done by part-time faculty. In basic skills/developmental courses 36 percent of the instruction was provided by full-time faculty.

**TEACHING FACULTY DEMOGRAPHICS
FALL 1990 THROUGH FALL 1994**

Teaching faculty have become increasingly diverse in terms of race and ethnic background over the past few years as colleges have implemented programs to recruit more faculty of color. At community colleges the number of faculty of color has grown 32 percent in five years. Despite these increases, the growth rate for faculty of color has been much slower than the growth rate for students of color. There is greater diversity in the full-time faculty ranks than among those teaching on a part-time basis.

The percent of the full-time faculty who are female has been growing with a slight decline in fall 1994. In fall 1994, 50 percent of all faculty (headcount) were female. Part-time faculty were 53 percent female compared to 44 percent female among the full-time faculty. At community colleges the number of full-time women faculty has grown by 14 percent in five years.

**CLASSIFIED STAFF FTES
STATE SUPPORTED
FALL 1993 AND FALL 1994**

"Classified staff" included the technical college support staff who work outside the state's classified staff system. They provide the record keeping, communication, maintenance, custodial and other general support functions for the colleges. Recent statutory changes regarding eligibility to be exempted from the classified staff system have resulted in some FTE staff switches to administrative/exempt employees. Between fall 1993 and fall 1994, some 94 classified employees were switched to exempt employees. For a count of exempt employees, see page 42.

Most classified staff are hired on a full-time basis with 94 percent full-time in fall 1994. Colleges also hire hourly employees on a part-time basis to meet peak workload demands, such as registration time. Hourly employees and student workers are not included in these classified employee FTEs.

Classified staff have been hired in recent years to take on student services and advising functions that had been performed by faculty or not offered in the past.

**ADMINISTRATIVE/EXEMPT PROFESSIONAL FTES
STATE SUPPORTED
FALL 1994**

Recent statutory changes regarding eligibility to be exempted from the classified staff system have resulted in switching of some staff from the classified counts to the exempt counts. Additionally, a new coding system allows differentiation of administrators from other professional staff who are exempted from the classified civil service rules. Given these changes, year-to-year comparisons are difficult. Thus what is shown below are data for fall 1994 only. The number of exempt FTE increased by 205 from fall 1993 to fall 1994. About half of that increase was due to the statutory changes described above. The other half of the increase was due to the growth in enrollments in the ESHB 1988 funded program for the unemployed. Growth was largest for instruction and institutional support.

The number of administrative/exempt professional FTEs varies from college to college as a result of differences in size and organizational structure. Some colleges place functions such as grants and contracts, physical plant, media services, institutional research and planning under the direction of exempt professional staff. At other colleges these functions are performed by classified staff.

In addition, the assignment of faculty chairs differs among the colleges. For example, business education is directed by administrative staff members at some colleges, but that function is divided among several program chairs (faculty) at other colleges.
