ABSTRACT

This study was a follow-up to a 1993 study which surveyed Iowa school districts to compare types of programs for gifted students in Iowa with the 16 types found in a 1985 national survey (the Richardson study). The present study examined the five program types which the 1993 study identified as having a large number of characteristics significantly different from expectation, given the proportion of results. Significant characteristics of the following five program types are identified: (1) part-time special program; (2) independent study gifted program; (3) itinerant teacher gifted program; (4) mentorship gifted program; and (5) full-time special class gifted program. Characteristics that the programs shared are identified and recommendations offered. The paper concludes that: these five program types as used by Iowa schools fall short of principles of excellence; the part-time special class (pull-out program) should be replaced with the full-time special class; a version of the full-time special class should be provided for intellectually above-average students; and modular programs and supplementary materials should be used in teaching science to K-8 gifted students. The survey questionnaire is appended. (DB)

Abstract

A national survey of public and parochial school districts was conducted (Richardson Study) which provided a profile of the current status of educational practices for gifted students. Using the national questionnaire, a similar survey of Iowa school districts was conducted in 1993. Reported were the results of the survey which showed that five of the 16 gifted program types had large numbers of characteristics which were significantly different from the expectation, given the proportion of the results. The chi-square statistic was the tool of comparison. Results indicated that although the five program types shared certain characteristics, the observed per cents of these characteristics were low--less than 50% in almost all cases. Recommendations were made.

RICHARDSON STUDY: CHARACTERISTICS OF FIVE GIFTED PROGRAMS IN IOWA

The Richardson Stud provides a profile of the current educational practices for gifted studen's throughout the United States and details which programs are most effective. It has attracted national attention because it is the most comprehensive report to date on national practices in educating gifted students since the Marland Report of 1972 (Cox, Daniel, & Boston, 1985; Daniel, 1989). The purpose of the follow-up Pyramid Project was to assist four school districts in implementing the recommendations of the Richardson Study. The Project's most distinguishing feature was its comprehensiveness (Cox & Gluck, 1989).

The study gathered information on 16 program types which constitute practices or approaches which are appropriate for gifted students. The program types are:

- Enrichment in the Regular 9. Early Entrance
 Classroom 10. Continuous Progress
- 2. Part-Time Special Class
- 3. Full-Time Special Class
- 4. Independent Study
- 11. Nongraded School
- 12. Moderate Acceleration
- 13. Radical Acceleration

5. Itinerant Teacher

6. Mentorship

7. Resource Rooms

- 8. Special Schools
- 14. College Board and Advanced Placement
 15. Fast-Paced Courses
 16. Concurrent or Dual Enrollment

During the spring of 1993 the national questionnaire (see Appendix A) was sent to the 431 public school districts in Iowa. Two hundred seventy three or 63% of the school districts responded. The existences of these program types in Iowa and the differences in responses between Iowa and the nation were determined and reported in another study (Belcastro, 1995).

However, of the 16 different program types, there were five of them each of which had a large number of characteristics which were significantly different from the expectation, given the proportion of results. The purpose of this study is to report on the significant characteristics of these five programs. Many of the observed characteristics of the schools were no different than the matching expected characteristics, given the proportion in each category; the results reported in this study are only those where the observed characteristics of the schools were significantly more or significantly less than expected.

 $\mathbf{5}$

Statistical Procedure

The chi-square statistic was used to determine the relationships between selected sets of two categories or characteristics of gifted programs in Iowa schools.

The Five Iowa Programs

Part-Time Special Program

In this program, the gifted student is with a heterogeneous class part of the time but is with students of similar ability part of the time. At the elementary level, this provision might be described as a "pull-out" program; on the secondary level it would include honors classes.

 Of those schools using the part-time special program, significantly more of them (87% vs. 84%) used
 I.Q. as a procedure in identifying students for their gifted programs than expected.

 Of those schools using the part-time special program, significantly more of them (85.3% vs. 84.5%) used teacher nomination as a procedure in identifying students for their gifted programs than expected.
 Of those schools using the part-time special program, significantly more of them (93.5% vs. 84.4%) had special requirements for teachers in their gifted

programs than expected.

4. Of those schools using the part-time special

program, significantly more of them (86% vs. 85.3%) used the library as a resource for their gifted programs than expected.

5. Of those schools using the part-time special program, significantly less of them (85.3% vs. 92.4%) used resources other than the library, museum, industry, government agency, or mentors in their gifted programs than expected.

6. Of those schools using the part-time special program, significantly more of them (87.4% vs. 84.8%) had goals for gifted students written at the district level rather than at the building level than expected.
7. Of those schools using the part-time special program, significantly less of them (61.1% vs. 85%) had no goals at all for gifted students at any level, district or building, than expected.

8. Of those schools using the part-time special program, significantly less of them (75.5% vs. 84.9%) had no advisory group for their gifted programs than expected.

9. Of those schools using the part-time special program, significantly more of them (89.9% vs. 84.6%) had special procedures established for evaluating gifted programs at the district level as opposed to the building level than expected.

10. Of those schools using the part-time special

program, significantly less of them (67% vs. 84.6%) had no special procedure established for evaluating gifted programs at either the district or building levels than expected.

Independent Study Gifted Program

In this program a student chooses certain areas for investigation and assumes a high degree of responsibility for meeting objectives.

 Of those schools using the independent study program, significantly more of them (57.4% vs. 46.4%) had special requirements for teachers in their gifted program than expected.

 Of those schools using the independent study program, significantly more of them (avg. 57.5% vs. 47.5%) used museums, industries, government agencies, and mentors as resources for their gifted programs than expected.

 Of those schools using the independent study program, significantly less of them (22.2% vs. 46.1%) had no goals at all either the district or building levels for their gifted programs than expected.
 Of those schools using the independent study program, significantly more of them (avg. 57.1% vs. 45.5%) included students, parents, teachers, and others in their advisory groups for their gifted programs than expected.

5. Of those schools using the independent study program, significantly less of them (30.2% vs. 45.5%) had no advisory groups for their gifted programs than expected.

6. Of those schools using the independent study program, significantly more of them (52.1% vs. 46%) had special procedures established for evaluating their gifted programs at the district level as opposed to the building level than expected.

7. Of those schools using the independent study program, significantly less of them (12.5% vs. 45.8%) had no special procedures either at the district or building levels for evaluating their gifted programs than expected.

Itinerant Teacher Gifted Program

A teacher with special skills in gifted education teaches gifted students in more than one school on a regular basis.

 Of those schools using the itinerant teacher gifted program, significantly more of them (49.1% vs. 36.2%) used other than I.Q. tests, achievement tests, grades, teacher nomination or peer nomination in identifying students for gifted programs than expected.
 Of those schools using the itinerant teacher gifted program, significantly more of them (50.9% vs. 35.7%)

had special requirements for teachers in their gifted programs than expected.

Of those schools using the itinerant teacher gifted program, significantly more of them (43.6% vs. 35.8%) had teachers in gifted programs participate in inservice training on a regular basis than expected.
 Of those schools using the itinerant teacher gifted

program, significantly more of them (64% vs. 35.8%) had other than teachers, counselors, and administrators participate in inservice training on a regular basis for their gifted programs than expected.

5. Of those schools using the itinerant teacher gifted program, significantly more of them (39.9% vs. 35.6%) had a staff member at the supervisory or administrative level responsible for their gifted programs than expected.

6. Of those schools using the itinerant teacher gifted program, significantly more of them (avg. 49.6% vs. 37.8%) used museums, industries, and mentors as resources in their gifted programs than expected.
7. Of those schools using the itinerant teacher gifted program, significantly more of them (39.4% vs. 36.6%) had a district-written philosophy for educating gifted students in their gifted programs than expected.
8. Of those schools using the itinerant teacher gifted program, significantly more of them (43% vs. 36.7%) had

goals for gifted students written at the district level as opposed to the building level for their gifted programs than expected.

Richardson

10

9. Of those schools using the itinerant teacher gifted program, significantly less of them (11% vs. 36.7%) had no goals at all for their gifted programs at any level, district or building, than expected.

10. Of those schools using the itinerant teacher gifted program, significantly more of them (41.3% vs. 36.3%) had administrators as members of an advisory group for their gifted programs than expected. 11. Of those schools using the itinerant teacher gifted program, significantly more of them (45.2% vs. 36.4%) had special procedures established for evaluating their gifted programs at the district level as opposed to the building level than expected. Mentorship Gifted Program

Mentorship is a program which assigns gifted students to work or study with adults who have special knowledge or skills in the student's area of interest. 1. Of those schools using the mentorship gifted program, significantly more of them (32% vs. 22.5%) had peer nomination as a procedure in identifying students for their gifted programs than expected. 2. Of those schools using the mentorship gifted program, significantly more of them (31% vs. 22.4%) had

other than I.Q. tests, achievement tests, grades, and teacher nomination as a procedure for identifying students for their gifted programs than expected. 3. Of those schools using the mentorship gifted program, significantly more of them (33.3% vs. 22%) had special requirements for teachers in their gifted programs than expected.

4. Of those schools using the mentorship gifted program, significantly more of them (28.2% vs. 22.4%) had teachers in gifted programs participate in inservice training on a regular basis than expected.
5. Of those schools using the mentorship gifted program, significantly more of them (25.3% vs. 21.5%) had a staff member at the supervisory or administrative level responsible for their gifted program than expected.

6. Of those schools using the mentorship gifted program, significantly more of them (avg. 34.48% vs. 23.5%) used museums, industries, government agencies, and mentors in their gifted programs than expected.
7. Of those schools using the mentorship gifted program, significantly more of them (26.1% vs. 22.9%) had goals for the gifted students written at the district level as opposed to the building level for their gifted programs than expected.

8. Of those schools using the mentorship gifted

ERIC Full Text Provided by ERIC

program, significantly more of them (42.3% vs. 22.3%) had other persons in addition to students, parents, teachers, and administrators on an advisory group for their gifted programs than expected. Because this program involves mentors outside of the school in order to provide as diverse an interaction with experts as possible, it is desirable that the advisory group would involve these mentors.

9. Of those schools using the mentorship gifted program, significantly more of them (29.8% vs. 22.4%) had established special procedures for evaluating their gifted programs at the district level as opposed to the building level than expected.

10. Of those schools using the mentorship gifted program, significantly less of them (14.7% vs. 22.4%) had established special procedures for evaluating their gifted programs at the building level as opposed to the district level than expected.

11. Of those schools using the mentorship gifted program, significantly less of them (4.2% vs. 22.4%) had no special procedures for evaluating their gifted programs than expected.

Full-Time Special Class Gifted Program

At the elementary level, this would most likely be a self-contained classroom of high-ability students or possibly a departmentalized classroom of such students.

 Of those schools using the full-time special class gifted program, significantly more of them (32.4% vs.
 20.1%) had special requirements for the teachers in their gifted programs than expected.

Of those schools using the full-time special class gifted program, significantly more of them (23.6% vs.
 3%) had a staff member at the supervisory or administrative level responsible for their gifted program than expected.

3. Of those schools using the full-time special class gifted program, significantly more of them (avg. 27.6% vs. 20.1%) used museums and industries as resources in their gifted programs than expected.

4. Of those schools using the full-time special class gifted program, significantly more of them (23.2% vs. 20.4%) had goals for their gifted students written at the district level as opposed to the building level than expected.

Of those schools using the full-time special class gifted program, significantly more of them (23.9% vs.
 20.2%) had established special procedures for evaluating their gifted programs than expected.

Shared Characteristics

1. A characteristic shared by all five of these programs is that significantly more of the schools using them (avg. 53.5% vs. avg. 41.7%) had special

requirements for teachers in their gifted programs than expected.

Richardson 14

2. A characteristic shared by all five programs is that significantly more of the schools using them (avg. 51.0% vs. avg. 42.8%) used one or more of the following resources in their programs: library, museum, industry, government agency, mentor.

3. A characteristic shared by all five programs is that significantly more of the schools using them (avg. 48.2% vs. avg. 41.9%) had special procedures established for evaluating gifted programs at the district level as opposed to the building level than expected.

4. A characteristic shared by four of the five programs (except independent study) is that significantly more of the schools using them (avg. 44.9% vs. avg. 41.2%) had goals for gifted students written at the district level rather than at the building level than expected.

5. A characteristic shared by three of the five programs (independent study, itinerant teacher, mentorship) is that significantly more of the schools using them (avg. 46.8% vs. avg. 34.7%) included one or more of the following in their advisory groups for their gifted programs than expected: students, parents, teachers, administrators, others.

6. A characteristic shared by three of the five programs (itinerant teacher, mentorship, full-time special class) is that significantly more of the schools using them (avg. 29.6% vs. avg. 25.8%) had a staff member at the supervisory level responsible for their gifted programs than expected.

Recommendations

1. Except for the part-time special class gifted program, the per cents of schools having the observed characteristics listed were disappointingly low; while the observed per cent of schools having certain characteristics was significantly higher than the expected per cent of schools having matching characteristics, the observed per cents in each case were almost always lower than 50%. For example, 39.4% of the schools using the itinerant teacher gifted program had a district-written philosophy for educating gifted students in their gifted program. While this is significantly larger than expected, it means that 60.6% of them do not have such a district-written philosophy for educating gifted students in their gifted program. One wonders how a district can operate efficiently without a written philosophy to guide it. It is recommended that the Iowa Department of Education make all attempts to increase the number of schools in those areas where the per cents are low.

ERIC

2. Even though Iowa schools scored significantly higher in observed characteristics than expected in these five gifted programs, the absolute per cents were low. Specifically, it is recommended that those deficient Iowa schools using these five gifted programs:

a. have special requirements for teachers in their gifted programs;

b. use museums, industries, government agencies,
 libraries, and other resources in their gifted
 programs;

c. include students, parents, teachers, administrators, and others in their advisory groups for their gifted programs;

d. establish special procedures for evaluating their
 gifted programs at the district level as opposed to the
 building level;

e. use I. Q. tests, achievement tests, grades, teacher nomination, peer nomination, and other procedures in identifying students for their gifted programs;
f. provide inservice training on a regular basis for teachers in gifted programs, counselors, and administrators and require them to participate;
g. assign a staff member at the supervisory or administrative level to be responsible for the gifted programs;

h. create a district-written philosophy for educatinggifted students in their gifted programs;

i. create goals for gifted students written at the district level rather than the building level for the gifted programs;

j. increase special funding available for gifted students at the local level and encourage the state legislature to allot gifted students the same amount of funding that it makes available to handicapped students.

Conclusions

 The per cents of Iowa schools having the characteristics in the five gifted programs are low. These five programs as used by the Iowa schools fall short of principles of excellence and need improvement.
 The part-time special class (pull-out program) should be abandoned even though approximately 95% of a'l gifted programs employ it at the upper elementary grade levels (Oglesby & Gallagher, 1983). It is an administratively expedient program which has many disadvantages (Belcastro, 1987).

3. The part-time special class gifted program should be replaced with the full-time special class gifted program. Being a part of the regular curriculum, the full-time special class students would meet most of

every day for academic subjects but would be mainstreamed with regular students for non-academic activities. The daily class schedule would be extremely flexible, there would be a variety of delivery systems, pacing would match the learning rate of its gifted students, and the subject matter would challenge students by its complexity and high levels of abstraction requiring students to analyze, synthesize, and evaluate.

4. A version of the full-time special class for should be provided for intellectually above-average students. They deserve such a program of their own and should not be included in a similar program for the gifted. The combining of gifted and intellectually above-average students in the same class harms both groups; it either inhibits the full development of the intellectually gifted students because the above-average students hold them back or it moves too fast for the intellectually above-average students making for incomplete comprehension.

5. One-size-fits all schooling should be just as unacceptable as one-size-fits-all clothing. Under onesize clothing, the rich would hire their own tailors; under one-size schooling, the rich would enroll their children in private schools. The true victims of schools without flexible programs to meet the needs of

\$9

its intellectually-varied students are the gifted children of the economically and social disadvantaged. 6. Use modular programs and supplementary materials in teaching science to K - 8 gifted students. Research has shown that existing basal textbooks fail to meet new science curriculum standards for all students but particularly for gifted students (Johnson, Boyce & Van Tassel-Baska, 1995).

THE RICHARDSON STUDY

IOWA QUESTIONNAIRE

The Sid Richardson Foundation in Fort Worth, Texas, is continuing its national study of elementary and secondary programs for gifted students. We are collecting data on programs that are identified as <u>special programs for the gifted</u> and also on other provisions for the most able and talented students which may not be identified as "Gifted Programs."

This questionnaire, though rather lengthy, should require only a few minutes of your time since not all of it will be applicable to any one district. You will notice that the programs are identified by a Roman numeral in the margin and that they are separated by double lines. We request that you complete the General Information section at the beginning and any other sections which apply to your district. The results of the study will be available state-wide to all who are concerned with this important issue.

An addressed envelope, requiring no postage, is enclosed for your convenience.

	DDD. Where is the resource room located? (1) In a separate room (2) In the library (3) Other. Please specify
VIII.	SPECIAL SCHOOLS. These include magnet schools which focus on a single discipline as well as those which include the entire spectrum. Also included are residential schools for the gifted.
	EEE. The special school is: (1) Residential(2) Non-residential
	FFF. The special school has a: (1) General curriculum (2) Special area of concentration. Please specify
	GGG. Is the school considered a magnet school? (1) Yes(2) No
	HHH. How are the students selected? (1) Self-selected(2) Specific criteria
	III. Is the school considered a school for gifted students? (1) Yes(2) No
	JJJ. Do the students pay tuition? (1) Yes(2) No
	KKK. How long has the school been in existence? (1) Less than 5 years (2) 5-10 years (3) More than 10 years
IX.	EARLY ENTRANCE. We define early entrance as a policy allowing students to enter a school earlier than the normal age for that district.
	LLL. At what level(s) is the provision for early entrance made? (1) Kindergarten (2) First grade (3) Middle/Junior High School (4) Senior High School

MMM. How many students entered these levels last year due to early entrance policy? List the <u>numbers</u> please.

 (1) Kindergarten
 (2) First grade

 (3) Middle/Junior High School
 (4) Senior High School

NNN. On what basis were early assignments made? Check all that apply.

(1) Ability test	(2) Achievement test
(2) Teacher recommendation	(4) Parental request
(5) Other. Please specify	·

OOO. Of the number accepted last year as early entrants, how many continued for at least one full year? List <u>numbers</u> at the appropriate levels please.

(1) Kindergarten	(2) First grade
(3) Middle/Junior High School	(4) Senior High School

PPP. Last year how many students left high school prior to graduation to enter college or university?
____(1) None _____(2) List the number, please

QQQ. How long has the early-er	strance policy existed in your district?	
(1) Less than 5 years	(2) 5-10 years	(3) More than 10 years

X. CONTINUOUS PROGRESS. We define continuous progress as a provision for students to progress through the curriculum of one or more subject areas as the required skills are mastered.

RRR. At which level(s) is continuous progress in operation?		
(1) Pre-School	(2) Elementary (Inc. K)	
(3) Middle/Junior High School	(4) Senior High School	

SSS. In what content areas does contin	nuous progress allow students	to advance at their own pace?
(1) Math	(2) Science	(3) Social Studies
(4) Language Arts (Inc. Reading))(5) English	1
(6) Foreign Language	(7) Other.	Please specify.

TTT. On what basis does a student move from one level to another? ____(1) Standardized tests _____(2) Teacher made tests

(3) Demonstrated competency (4) Other. Please specify.

UUU. What percentage of students are functioning above grade level in one or more content areas this year?

____(1) Less than 5% ____(2) 5-10% ____(3) 11-20% ____(4) More than 20%

VVV. How would you describe the continuous progress program?

____(1) Group instruction ____(2) Individual instruction

____(3) Other. Please specify._____

WWW. How long has the continuous progress program been in operation?

(1) Less than 5 years	(2) 5-10 years	(3) More than 10 years
-----------------------	----------------	------------------------

		31
XI.	NONGRADED SCHOOL. We define a nongraded school as one in which the usual labels, suc grade, have been removed, and students progress at their own pace. Thus, one child might comp is normally covered in one grade in less than the usual amount of time, and another child might required than the usual amount of time to gain the skills generally acquired in one year in a graded school	ch as first dete what uire more d system.
	XXX. At what level(s) is your district nongraded?	
	(1) Pre-School (2) Elementary (Inc. K)	
	(3) Middle/Junior High School(4) Senior High School	
	YYY. Do some students complete the level(s) checked in fewer years than is normally required(1) Yes(2) No	1?
	 ZZZ. If you answered "Yes" how many students: (1) Received additional enrichment only (2) Were offered curricula from the next higher level but did not leave the first school (3) Moved on to the next higher school 	
	AAAA. How long has your district been nongraded?	
	(1) Less than 5 years (2) 5-10 years (3) More than 10	vears
		Jeme
XII.	MODERATE ACCELERATION. We define moderate acceleration as any kind of provision whice a student to complete the grades K-12 in less than thirteen years but more than ten. BBBB. How many students were in last year's graduating class?	ch allows
	(1) Less than 100 (2) 100-500 (3) More than 50	00
	CCCC. Of this number, how many spent fewer than 13 years but more than 10 in grade K-12? (1) Less than 2% (2) 2-5% (3) More than 59	%
	DDDD. How long has your school had a policy which allowed or encouraged moderate acceleration (1) Less than 2 years (2) 2-5 years (3) More than 5	ation? years
XIII.	RADICAL ACCELERATION. We define radical acceleration as any kind of provision which	allows a
	student to complete grades K-12 in fewer than 11 years.	
	EEEE. How many students were in last year's graduating class? (1) Less than 100 (2) 100-500	ю
	FFFF. Of this number, how many spent fewer than 11 years in grade K-12? (1) Less than 1% (2) 1-2% (3) More than 29	То
	DDDD. How long has your school had a policy which allowed or encouraged radical acceleration(1) Less than 2 years(2) 2-5 years(3) More than 5	on? years

XIV. COLLEGE BOARD ADVANCED PLACEMENT. As the name specifies, we refer to the Advanced Placement of the College Board.

32

HHHH. How long has your school	l offered College Board Advan	ced Placement Courses?
(1) Less than 5 years	(2) 5-10 years	(3) More than 10 years
IIII. In what content areas does vo	ur school offer Advanced Place	ement courses?
(1) American History	(2) Art-History (3) Biol	ogy (4) Chemistry
(5) English Composition/Lite	rature (6) Engl	ish Language/Composition
(7) European History	(8) French (9) Gerr	nan (10) Latin
(11) Mathematics	(12) Music(13) Phy	ysics(14) Spanish
JJJJ. How many students complete	ed at least one Advanced Place	ment course last year? List the number
please.		
(1) Sophomores	(2) Juniors	(3) Seniors
(4) Other. Please specify		
KKKK. How many students took	at least one Advanced Placeme	ent examination last year? List the
<u>number</u> please.		(2) Seniors
(1) Sophomores	(2) Juniors	(5) Semons
(4) Other. Please specify		
LLLL. What percentage of the ex	aminations received a score of:	
(1) "3"	(2) "4"	(3) "5"
MMMM. How were the Advanced	l Placement opportunities offer	red?
(1) Conventional classes		(2) Independent study
(3) Seminars		(4) Correspondence courses
(4) Other. Please specify.		
() =		
<u> </u>		
FAST PACED COURSES We	lefine fast paced courses as an	arrangement which allows a student to
complete two or more courses in a	discipline in an appreciated to	me shan
complete two or more courses in a	i discipinio ni an autiovialeu n	me span.
NNNN. Last year, how many stud	dents were enrolled is such cou	rses in:
(1) Mathematics	(2) Foreign language	(3) Science
(4) Other. Please specify.		(-) = 000000
(') = i iouoo opooniji		

XV.

XVI. CONCURRENT OR DUAL ENROLLMENT. We define concurrent or dual enrollment as an arrangment which allows a student to enroll in classes on two campuses. For example, a middle/junior high student who takes one or more classes at the high school or a high school student who takes one or more classes on a college campus.

OOOO. How many students enrolled in classes on two campuses last year? Please specify the numbers.

(1) Middle/Junior High and Senior High combination

(2) Middle/Junior High and College combination

(2) Senior High and College combination

PPPP. Of the number who enrolled in classes at both the middle/junior high and senior high, what percentage satisfactorily completed the class?

(1) Less than 50% (2) 50-75% (3) 76-99% (4) 100%

QQQQ. Of the number who enrolled in classes at both the middle/junior high and college, what percentage satisfactorily completed the class?

(1) Less than 50% (2) 50-75% (3) 76-99% (4) 100%

RRRR. Of the number who enrolled in classes at both a senior high school and college, what percentage satisfactorily completed the class?

(1) Less than 50% (2) 50-75% (3) 76-99% (4) 100%

OTHER. If your school has a provision or program for gifted students not listed in any of the above sections, please describe it briefly.

Thank You! Dr. Frank P. Belcastro Dept. of Ed./Psychology University of Dubuque Dubuque, Iowa 52001
