ABSTRACT

A bibliography covering representative literature on higher education between 1976 and 1983 is presented. For each reference, information is included on author, title, place of publication, publisher, and date. Pamphlets and monographs of less than 100 pages are identified, but theses and other unpublished works are excluded. A section is included on bibliographies, reference works, publications on research and evaluation in higher education, and materials on innovations and on educational development units. References are presented under the following major headings: higher education in Great Britain, North America, and Australia; aims and functions of higher education; curriculum; teaching methods; examinations; libraries; the academic profession; and students. The profiles of the three geographic areas cover: administration, finance, and statistics; research and graduate education; teacher education; continuing education; and history. Specific topics concerning students include: access and demand, choice of major, admission, counseling and health services, student characteristics, financial considerations, foreign students, staff-student relations, learning, performance, study skills, communication skills, graduate students, and employment. A list of periodicals cited and an author index are provided. (SW)

Introduction

This bibliography, like its predecessors to which it is a supplement, is intended to go some way towards meeting the needs of academics, research workers, administrators and students who may have an interest in particular aspects of higher education but who may not wish to embark upon a thorough search of the literature. It is therefore highly selective in detail yet comprehensive in scope so that no major topic has been neglected. The aim has not been to attempt to include everything which has been published under any given heading but rather to provide an introduction to the increasingly extensive and scattered literature on higher education.

Most of the material has been published between 1976 and 1983, although the 1983 coverage is far from complete. Users are advised to consult the earlier volumes for publications prior to 1976. Volumes I and II were published by the National Foundation for Educational Research in England and Wales; Volume III was published by HERDSA.

The classification system is substantially the same as that used in the previous volume except for a small number of sections which have been subsumed under others because of a dearth of material, for example, the "brain drain", and student activism. A sign of the times!

Sufficient information has been provided to enable every entry to be identified: author, title, place of publication, publisher and date. Pagination has been given for journal articles but not for books. Pamphlets and monographs of less than 100 pages are indicated by the suffix (P). Theses and other unpublished works have been excluded.

I wish to acknowledge the assistance of Lee Andresen, Eve Barrett, Elizabeth de Rome, Vivian Shanker and Elinor Smith. Special thanks to Rita Brown for compiling the indexes and preparing the final copy.
