ABSTRACT

This is one form of three performance checks booklets (A, B, and C) for two texts of Level III of the Intermediate Science Curriculum Study (ISCS). These two texts are Why You're You (WYY) and Investigating Variation (IV). The 12 performance checks booklets for Level III are considered one cf four major subdivisions of a set of individualized evaluation materials for Level III of the ISCS. This booklet (form B), developed to assess the students' achievement of the objectives of the WYY and IV texts of Level III, contains a set of performance checks which are equivalent to the performance checks of the other two forms. (A and C). Each performance check has its own code number which indicates the unit number and identifies whether it is based on core material or excursions. Directions for students' use of performance checks are also included. (HM)

- FOREWORD

To implement an educational approach successfully, one must match the philosophy of evaluation with that of instruction. This is particularly true when individualization is the key element in the educational approach. Yet, as important as it is to achieve this match, the task is by no means simple for the teacher. In fact, without specific resource materials to help him, he is apt to find the task overwhelming. For this reason, ISCS has developed a set of individualized evaluation materials as part of its Individualized Teacher Preparation (ITP) program. These materials are designed to assist teachers in their transition to individualized instruction and to help them tailor their assessment of students' progress to the needs of all their students.

The two modules concerned with evaluation, *Individualizing Objective Testing* and *Evaluating and Reporting Progress*, can be used by small groups of teachers in inservice settings or by individual teachers in a local school environment. Hopefully, they will do more than give each teacher an overview of individualized evaluation. These ITP modules suggest key strategies for achieving both subjective and objective evaluation of each student's progress. And to make it easier for teachers to put such strategies into practice, ISCS has produced the associated booklets entitled *Performance Objectives*. Performance Assessment Resources, and Performance Checks. Using these materials, the teacher can objectively assess the student's mastery of the processes, skills, and subject matter of the ISCS program. And the teacher can obtain, at the moment when they are needed, specific suggestions for remedying the student's identified deficiencies.

If you are an ISCS teacher, selective use of these materials will guide you in developing an individualized evaluation program best suited to your own settings and thus further enhance the individualized character of your ISCS program.

> The Co-Directors Intermediate Science Curriculum Study Rm 415, W.H., Johnston Building 415 North Monroe Street Tallahassee, Florida 32301

NOTES TO THE STUDENT

Now that you have completed several chapters, excursions, and self-evaluations, you are ready to help your teacher determine how well you are doing. The performance checks in this book will provide your teacher with this information. Then your teacher can help you with things you may not understand and can keep⁴ a record of your progress.

Read the next section carefully. It explains some important things about the performance checks in this book, and it gives you specific suggestions for using them.

AM 1

READY?

What You Need To Know about Performance Checks

- 1. You do performance checks when you are ready. Performance checks are somewhat like the questions in the selfevaluations you do them when you are ready, not when, the whole class is ready.
- 2. Your teacher or both of you decide how many you do. Your teacher or you and your teacher together will decide which ones you should do. You are not expected to do all of the performance checks.

3. There are three forms for each performance check. Every performance check is written in three forms A, B, and C. (The title of this booklet tells you whether it is Form A, B, or 'C.) Usually the answers for each form are different. When you do a check, you will use only one form. The A, B, and C forms are always in different booklets, Within each booklet all the performance objectives for the same unit are listed together. A unit contains two-or three chapters and their related excursions. These units are in numerical order. Each unit has performance checks based on core material and performance checks based on excursions.

• 4. Each performance check has its own number. The number is in the outside margin of the page and will look like this: IV-03-Core-17A or WYY-02-Exc 4-2-2A. These numbers mean

IV - <u>03</u> - <u>Core</u> - <u>17</u>	A -and	$\underline{WYY} - \underline{02} - \underline{Exc}$	$\underline{4-2} - \underline{2} \qquad \underline{A}$
check number based on core material unit text	form of the check	based on excursion material unit text	form of the check check number excursion number

5. Each performance check is separated from the other. There is a line before each performance check and one after it. Some performance checks have several parts, so do everything called for between the lines. If there is no line at the bottom of a page, the check is continued onto the next page. 6. Sometimes you will need to use equipment. If special materials are needed, they will be in boxes labeled with the same number and sometimes the same letter too as the performance check for which you need them.

7. Some performance checks have two or more answers. If more than one answer is correct, you must select all the correct choices. In such cases, selecting just one answer is not enough.

8. Some performance checks have no answers. Occasionally, you may be asked to do something that is impossible and to explain your answer. If so, say that the task is impossible and explain why.

9. You share books of performance checks and YOU DO NOT WRITE IN THEM. Write your answers on other paper. Give the number and form of the performance check for each answer you write. If you are to draw a graph, a chart, or a map, your teacher may provide you with grid paper or a copy of the map or chart.

10. Your teacher or his assistant will collect and mark your checks. And sometimes you must ask him to watch or assist you as you do a check.

11. Sometimes a review procedure will be suggested. If you can't do a performance check, you may be asked to review a part of the text or a self-evaluation question. You may then be checked on the same material, so be sure you understand the material you review. Get help if you need it.

ER

WYY 01-Core-1B	 State what parts of plants and animals make sperm. What does a sperm do?
WYY 01-Çore-2B	Eggs and sperin are involved in producing offspring of many organisms. 1. What is the source of an egg? 2. What is the function of an egg?
WYY 01-Core-3B	During the mating of animals, what happens to sperm?
WYY 01-Core-4B	Get some ether, an etherizer, and vial WYY-01-Core-4 from the supply area. Etherize the fruit flies in the vial. Have your teacher check the etherized frait flies.
WYY 01-Core-5B	Get vial WYY-01-Core-5, two empty capped vials, an etherizer, and some ether from the supply area. Don't take any of the flies out of the vial at this point. Etherize the flies in the vial. Shake the vial gently. Remove the flies from the vial. Now put the etherized flies and the dead flies into separate vials. Cap the vials, and label each as containing dead or etherized flies. Have your teacher check your work. Return all the flies to the vial you got them from.
WYY 01-Core-6B	Get some ether, two empty vials with caps, an etherizer, and vial WYY-01-Core-6 from the supply area. Etherize the fruit flies. Put all the male flies into one of the empty vials and all the female flies into the other empty vial. Cap the vials, and label each as containing male or female flies. Have your teacher check your work. Return all the flies to the original vial.
WYY 01-Core-7B	State what you would do to obtain virgin female fruit flies from a vial containing nonadult and adult fruit flies.
WYY 01-Core-8B	Operationally define <i>pure strain</i>
WYY 01-Core-9B	What are the stages in the life cycle of a Yruit fly?,
WYY 01-Core-10B	Get jar WYY-01-Core-10 and a hand lens from the supply area. Point out to your teacher the egg, the larva, the pupa, and the adult stages in the jar.
WYY 01-Core-11B	What appearance would be possible for first-generation offspring of a cross between fruit flies that are pure strain for bristles on their bodies and fruit flies that are pure strain for no bristles on their bodies?

WYY 01-Core-12B	Flowers have many different features that show variation. In one experiment, Peter - studied only one feature, flower color, even though flowers inherit many features at one time. Why would Peter study the inheritance of only one feature at a time?
WYY 01-Core-13B	 Verna crossed bean plants that were pure strain for green pods with bean plants that were pure strain for yellow pods. Then she crossed the first-generation offspring to get the second-generation offspring. Predict the appearance of the first- and second generation offspring of this cross by choosing the correct descriptions below. 1. Among the first-generation offspring a. all plants had the same color pods. b. some plants had green pods and some plants had yellow pods. 2. Among the second-generation offspring a. all plants had green pods and some plants had yellow pods. b. some plants had green pods and some plants had yellow pods.
WYY 01-Core-14B	Sam crossed two pure-strain plants. One had orange flowers, and the other had blue flowers. He crossed the first-generation offspring with each other. Predict the mos likely ratio of variations of flower color he will get in the second-generation off spring.
WYY 01-Core-15B	Tell your teacher that you are about to do this check. In the supply area, you will find a box of beans labeled WYY-01-Core-15. You are to estimate the ratio of the white beans to the brown beans in the box quickle and accurately.
WYY 91-Core-16B	Get vial B from box WYY-01-Core-16 in the supply area. Look at the beans carefully Are they pure-strain beans?
WYY 01-Core-17B	The table below refers to the offspring produced by mating two petunia plants, both of which had red flowers.
•	GENERATION FLOWER COLOR Parents red 1st-generation red offspring
	2nd-generation red offspring
•	 According to the ISCS two-bit model, is this variety of petunias pure strain for flower color? Explain your answer.

 ippose you crossed a pure-strain dwarf marigold plant with a pure-strain giant arigold. Which statement best describes the first-generation offspring of this cross? a. There will be a 3-to-1 ratio of giant marigolds to dwarf marigolds. b. Half the plants will be dwarf, and half will be giant. c. All the plants will be of a medium height. d. Either all the plants will be dwarf, or all the plants will be giant. e. There will be a 3-to-1 ratio of dwarf marigolds to giant marigolds. 	WYY 01-Core-18B
 uppose you were to cross sweet pea plants that were pure strain for red flowers with veet peas that were pure strain for yellow flowers. Select the statement that best escribes the appearance of the second-generation offspring of this cross. a. All of the flowers will be orange. b. Some plants will have all yellow flowers, and the others will have all red flowers. There will be a 3-to-1 ratio of the colors. c. All of the plants will have half red flowers and half yellow flowers. d. All of the plants will have one-color flowers, but 1 cannot tell if they will be yellow or red. e. Half of the plants will have all red flowers, and the other half will have all yellow flowers. 	WYY 01 Core-19B
wo pure strains of wheat were crossed. In the second-generation offspring of this ross, there were 71 dwarf plants and 198 tall p lants. 1. What did the wheat plants in the first-generation offspring look like? 2. What did the parent wheat plants look like?	WYY 01-Core-20B
r'our teacher will observe you for this check when he can.	WYY 01-Core-21B
Your teacher will observe you for this check when he can.	WYY 01-Core-22B
Your teacher will observe you for this check when he can.	WYY 01-Core-23B
Your teacher will observe you for this check when he can.	WYY 01-Core-24B
Your teacher will observe you for this check: when he can.	WYY 01-Core-25B
The word <i>cross</i> appears in reports of experiments done to find out how characteristics are inherited. Give a definition of the word <i>cross</i> as it is used in such reports.	WYY 01-Exc 1-1-1B

ER

WYY 01-Exc 1-2-1B	Below are two definitions of ways in which people differ. Study these definitions, and answer the questions that follow.
	Definition a: A person's gold-finding index is his ability to find gold mines. Definition b: A student's kick index is a measure of how far he can kick a soccer ball. It is determined by measuring in meters how far he can kick a properly inflated soccer ball.
•	1. Which of the above is an operational definition? 2. Explain-the reason for your answer.
WYY 01-Exc 1-2-2B	Whenever possible, there are two questions an operational definition of anything should answer. What are those questions?
WYY 01-Exc 1-3-1B	Many insects, such as fruit flies, have a short life cycle. In Florida there are few, if any, of these insects around during the winter, but they are plentiful during the rest of the year. Explain why so very few of these insects develop during the winter.
WYY 01-Exc 1-4-1B	What is the total number of bits of information that all of Cheryl's great-grandparents had for the feature hitchhiker's thumb.
WYY ObExc 1-4-2B	Lucy has black hair. Her great-great-great-grandmother Mary had black hair, her great-great-great-grandfather Michael also had black hair. And her great-great-great-great- grandfather Herbert had blond hair. 1. Can you determine which of her three great-great-great-great-grandparents con- tributed the bits for Lucy's black hair? 2. Explain your answer.
WYY , 01-Exc 2-1-1B	Susan found after a party that her guests had drunk 15 colas and 7 orange soda pops. What is the rough ratio of colas to orange pops that her guests drank? Express the ratio to the nearest tenth, or 1 decimal place.
WYY 01-Exc 2-1-2B	Nancy calculated the rough ratios shown below. Convert these to rounded-off ratios. 1. 3.2 to 1 2. 1.9 to 1 3. 7.1 to 1 4. 12.8 to 1

A large family was surveyed to determine the pattern by which the total lack of skin pigment (albinism) is inherited. The albino variation was found to be recessive to normal pigmentation.

Ask your teacher for a copy of the chart below or paper to trace it. Determine the bits that each of the individuals shown in the chart could have. On your chart write the bit symbols in the small circles below each large symbol. Use N to represent the bit for normal skin and n to represent the bit for albinism.

The bit for brown color in some bean seeds is dominant over the bit for white color. Suppose you cross plants which produce brown beans with plants which produce white beans.

- F. Will the beans of the first offspring bean plant be brown?
- 2. Explain your answer.

Construct an inheritance chart for the inheritance of tongue-rolling ability for the families described below. Use squares and circle's and shading and nonshading. SecNear each square or circle, write the person's name and a possible pair of bits which f that person may have. Use R for roller and r for nonroller.

Grandfather John Smythe is a roller, but Grandmother Ann Smythe is a nonroller. Their children, Mark and Luke, are rollers.

Grandfather Pete Johnson is a nonroller, but Grandmother Mary Johnson is a roller. Their girl, Mary, is a roller, but their other child. Sam, is a nonroller.

Luke Smythe marries Mary Johnson. Their boy, Ted, is a roller. Their other child, Lois, is a nonroller.

02-Core-23B

02-Core-24B

WYY 02-Exc 4-1-1B

The bit for rough coat (R) is dominant over the bit for smooth coat (r) for guinea pigs. Suppose you crossed a rough-coat guinea pig (Rr) with a smooth-coat guinea pig (rr).

1. Use a chart like that shown below to determine the possible combinations of bits that the offspring could have.

18

2. What is the ratio of rough-coat offspring to smooth-coat offspring?

 • •
 •
• •

A certain breed of dog has seven features that show variation. They are length of hair, curliness of hair, hair color, spottedness of coat, shape of nose, length of tail, and droopiness of ears. According to the two-bit model, what is the total number of bits that a dog of this type receives for all of these seven features?

WYY 03-Com-1B

03-Core-2B

A type of dog receives information for hair length, hair curliness, hair color, spottedness of coat, and eye color. The possible variations of these features are shown below.

	·	•		J	•
	· · ·	KEY	·		Ì
FEATURE	BIT	VARIATION	BIT	VARIATION	Ĵ
Hair length	·S ·	short	Ś,	long	Æ
Hair curliness 💈	+ (°	curly	c	straight	
Hair color	b	brown	В	black	
Spottedness of coat	u	spotted	U _v ^{•••}	unspotted	
Evo color	R		r	blue	

Use the key above and the two-bit model to determine the appearance of the dog that inherited the bits shown in the table below. List the feature numbers, and after each number state the variation of the feature that the dog will show. (Example: ' 1, long)

FEATURE NUMBER	FEATURE	BITI	BIT 2
. 1	hair length	S	ş.
2	hair curliness	′ c	C
. 3 -	hair color	В	В
. 4	spottedness of coat	U [.] .	ο u
5	.eye color	r	R

Suppose you found that the results of an experiment you did with fruit flies did not **WYY** agree with the predictions of the two-bit model. **03-Core-3B**

- 1. What should you do to establish the value of your results?
- 2. How can your results affect the model?

People who studied inheritance patterns before Mendel did were unsuccessful in understanding them. State two reasons why Mendel was successful in understanding these patterns.

WYY 03-Exc 6-1-2B	People who studied inhefitance before Mendel did were unsuccessful in understand- ing how it worked. Mendel used mathematics, a model, and the systems approach. Explain why each of these is helpful in solving, a scientific problem.
WYY 03-Exc 6-2-1B	In zinnias, the bit for tallness (1) is dominant over the bit for dwarfness (t). The bit for red flowers (R) is dominant over the bit for yellow flowers (r). Suppose you had a zinnia plant that was pure strain for dwarfness (tt) and for red flowers (RR). You crossed that plant with one that was pure strain for tallness (TT) and for yellow flowers (rr). Predict the appearance of the first-generation offspring of this cross.
[′] WYY 03-Ехс 6-2-2В	You may refer to Excursion 6-2 to help you answer this check. In-zinnias, the bit for tallness (T) is dominant over the bit for dwarfness (t). The bit for red flowers (R) is dominant over the bit for vellow flowers (r). Suppose you had a zinnia plant
	that was pure strain for dwarfness (tt) and for red flowers (RR). You crossed this plant with one that was pure strain for tallness (TT) and for yellow flowers (rr). Predict the ratio of the feature variations that you would find in the second-generation offspring of this cross.
WYY 03-Exc 7-1-1B	When a black Andalusian chicken (BB) is mated with a white Andalusian rooster (WW), the offspring are a mixed black and white that appears blue (BW). The genetic bits for color do not seem to mask each other completely. Copy the charts below. Then predict the appearance of the offspring of the two separate crosses.
	Chart 1.
•	Chart 2.

ERIC Full Text Provided by ERIC Get from your teacher a copy of the chart below or paper to trace it. In some insects, inheritance of wing length is related to the sex of the insect. In the males, short wings are dominant over long wings. In the females, long wings are dominant over short wings. Indicate on your chart a possible pair of bits carried by each of the insects. Represent the bit for long wings with W and for short wings with w. WYY 03-Exc 7-2-1B

Archie Sanford has three lovely daughters, but he complains because he does not have any sons. He blames his wife for this. WYY 03-Exc 7-3-1B

A. Is his reasoning logical when he blames his wife for producing only daughters?

21

' 2. Explain your answer. 🔨

WYY • 0**3**-Exc 7-4-1B Get a copy of the chart labeled WYY-03-Exc 7-4-1 from your teacher. You may use Excursion 7+4 to help you do this check. In fruit flies, the X chromosome carries the bit for the recessive duriation forked bristles (X^{f}) . The Y chromosome carries no information for this future. The appearance of and bits for the parents are given in the chart below. You are to predict the appearance of and the bits $(X^{f}, X^{n}, and Y)$ that will be carried by the first- and second-generation offspring of the cross by, filling in the blanks on your copy of the chart. Remember that X^{n} represents the normal trait.

2. Explain your answer.

ERIC

Investigating Variation

Below are two definitions of ways in which people differ. Study these definitions, and answer the questions that follow.

Definition a: A person's *gold-finding index* is his ability to find gold mines. Definition b: A student's *kick index* is a measure of how far he can kick a soccer ball. It is determined by measuring in meters how far he can kick a properly inflated 'soccer ball.

M. Which of the above is an operational definition?

2. Explain the reason for your answer.

Whenever possible, there are two questions an operational definition should answer.	IV
What are those questions?	01-Core-2B
Perhaps you have heard people make statements such as "All people over 30 are the	IV 01-Core-3B

same." 1. Can a statement like this ever be true?

-2. Explain the reasons for your answer.

-!

Why do scientists spend a great deal of time looking for patterns in the way things IV change? 01-Core-4B

Junior high school pupils differ in their ability to jog around the school track. The distance they can jog is called the *jogging index*. Write an operational definition of *jogging index*. **IV** • **01-Core-5B**

Suppose you wanted to compare the ability of different students in your class to play the banjo. From the choices below, select the best way of measuring banjoplaying ability.

a. Ask each person how well he can play the banjo.

- b. Ask each person how many banjo lessons he has had.
- c. Ask each person to tell who his banjo teacher is.
- d. Ask each person to play the banjo, and judge how well each does.
- e. Ask each person to play the same unfamiliar songs, and count the number
- of mistakes each makes.

What is an advantage of using a measuring device, such as a ruler or a test, rather than just relying on your senses when you want to compare different things? 01-Core-7B

IV Of Core-8B	Burt was measuring reaction time, using the dropping-meterstick method. He found that Linda had a much shorter reaction time than anyone else. He also noticed that she watched his hand release the metorstick. All the other students had watched their own fingers with which they caught the meterstick. Burt concluded that a student's reaction time, as measured by the dropping-meterstick method, is shorter when he watches the release of the meterstick than when he watches the catch point. Describe an activity that you could perform to test this idea.
IV · 01-Core-9B ·	When a textbook says that a feature shows continuous variation, what does that mean?
IV 01-Core-10B	When we say that a feature shows an <i>either-or</i> variation, what do we mean?
IV 01-Core-11B	Identify each of the variables below either as a continuous variable or as an either-or variable. 1. Whether a person has ever been to Australia 2. How fast a secretary can type 3. The length of a girl's hair 4. A man's age 5. If a man is a fireman or not
IV 01-Core-12B	Stu measured the distances the students in his homeroom could swim. His measurements in meters are shown below.Henry152Jim153Janice145Henry152Jim153Wayne165Fred150Lynn153Wayne165Wendy140Louise173Amy167

What is the mode error for the time sense of these students? Show your calculations.

IV Dr. Roberts and Dr. Cooney are both interested in characteristics of various groups. 02-Core-21B They constantly measure patterns and similarities within groups being studied. Why are researchers like Dr. Roberts and Dr. Cooney more concerned about patterns and similarities than about individual differences? IV Peter calculated the mean height of all the students attending summer school. The 02-Core-22B mean height was 160 cm. Roger was one of the students in summer-school 1. Using only the above information, can'you determine Roger's height to the nearest centimeter? × 2. Explain your answer, IV Mrs. Freed tested her students' reading speed. She plotted a histogram of the data 02-Exc 3-1-1B collected. 1. List the letters of the points on the histogram that she should use to change the histogram into a line graph. 2. What are these points called? b 8 NUMBER OF STUDENTS d k 6 fg 4 2 50-74 75-99 100 124 125 149 150 174 175 199 200 224 READING SPEED (in words per minute) IV Use a protractor to measure the size of the two angles below. Record your answers 02-Exc 4-1-1B on a separate paper.' Angle 1 Angle 2

Animals with different characteristics often live in different areas, eat different food, and have different enemies. The chart below shows some of the differences between two kinds of animals.

CHARACTERISTICS	ANIMAL A	ANIMAL B
Fype of animal	small, hooved animal	large bird
Living area	mountainside	nests on trees
Main food	grasses	fish
Method of feeding	≂ grazes grass	catches fish at the water's surface
د Enemics	mountain lions and bobcats	man

1. Would it be advantageous for animal A to have its eyes in the sides of its head or in the front of its head?

2. Explain the reason for your answer.

3. Would it be advantageous for animal B to have its eyes in the sides of its head or in the front of its head?

4. Explain the reason for your answer.

In a recent police investigation, several standard fingerprints like those shown below were used as comparisons. Safe-cracking Sam belonged to the loop category in the standard file, yet his fingerprints were not exactly like the loop pattern in the standard set. Explain why.

Tented arch

Loop

" Plain whorl

When researchers measure the characteristics of a population; they usually make IV. measurements on only a sample of the population. Why is this done rather than 02-Exc 5-1-1B making measurements of the entire population? ١V Which one of the curves below is a normal curve? 02-Exc 5-1-2B Graph a. Graph b. T NUMBER OF INDIVIDUALS_ NUMBER OF INDIVIDUALS HAND LENGTH OF HAND LENGTH OF Graph d. Graph c. NÚMBER OF INDIVIDUALS**_** NUMBER OF INDIVIDUALS LENGTH OF HAND LENGTH OF HAND Suppose you were going to measure a continuous human variable such as weight. IV You would select a random sample of people, measure their weights, and draw a graph 02-Exc 5-1-3B of the results. Which of the graphs below would you expect your graph to look like? Graph_a. Graph b, NUMBER OF INDIVIDUALS NUMBER OF INDIVIDUALS **INCREASING WEIGHT INCREASING WEIGHT** Graph d. Graph c. NUMBER OF INDIVIDUALS NUMBER OF

INCREASING WEIGHT

INCREASING WEIGHT
