 DESCRIPTORS *Allied Health Occupations Education; Associate Degrees; Bachelors Degrees; Community Colleges; Doctoral Degrees; Graduate Study; Higher Education; Licensing Examinations (Professions); Masters Degrees; Outcomes of Education; Professional Education; *Program Costs; Program Evaluation; Salaries; *Technical Education; Tuition; Two Year Colleges; Undergraduate Study; Vocational Education
 IDENTIFIERS *Colorado; University of Colorado Denver

ABSTRACT

This report summarizes a study of costs of health professions training programs from certificate to professional level in Colorado. The main findings include the following: the majority of degree programs are offered at the University of Colorado Health Sciences Center and at community and local district colleges; there is a high degree of coordination and articulation between levels for similar programs; costs range widely between programs and institutions; tuition and fees cover from less than 20 percent of costs for some programs to more than 60 percent for others; because most institutions have a single tuition rate, tuition is not tied directly to program costs; student demand exceeds capacity in the majority of health care programs; expansion of some programs would be appropriate; programs have been effective in preparing most students for success in licensing examinations; and since health professions programs prepare students for specific careers, students either find employment in their field or go on to further training. Tables provide information on costs and revenue at the Health Sciences Center and at other institutions, on full-time tuition rates at various institutions, on licensing examination success, and on placement and starting salaries. Conclusions	5

EXECUTIVE SUMMARY

On May 8, 1996, the Joint Budget Committee (JBC) asked the Colorado Commission on Higher Education (CCHE) for "...a study of costs of health care programs at the certificate, associate, baccalaureate, masters, doctoral, and professional levels. The study should encompass the costs necessary to accomplish the educational goals of the programs at each level, the appropriate sharing of costs between the students and the state at each level, and ways in which costs can be reduced by articulation of programs and sharing of resources among similar programs at different levels."

This report, the Commission's response to that JBC request, presents the requested information in summary format. Profiles of each degree program are the basis for this report. These profiles as well as a complete report prepared by the Health Sciences Center and other program descriptions were submitted to the Joint Budget Committee and are available to interested parties at the Commission offices.

In generating the information included in this report, the Commission worked with representatives of each of the governing boards with programs in the health professions. It became clear to this group early in the study that it would be difficult to generate precise and comparable cost and

revenue information across the range of institutions and programs. The methodology used to derive this information is explained in the Costs and Revenues Section of this report and should help avoid misinterpretation.

The main points from this summary of health professions programs in Colorado are:

- The majority of degree programs in the health professions are offered at the University of Colorado Health Sciences Center (CU-HSC) and by the state's system of community and local district colleges.
- A high degree of coordination and articulation exists between levels for similar programs. This is true in particular in nursing, where the Colorado Nursing Articulation Model sets standard requirements for the progress of students through the levels of nursing training.
- Costs range widely between programs and institutions.
- Tuition and fee revenues cover a wide range of costs: below 20 percent for some programs, and above 60 percent for other programs. In no case do tuition and fee revenues cover the entire program costs, so the state contributes to

these programs at varying rates. It is important to note that tuition reported by CCHE is aggregated by governing board, not individual institutions.

students either succeed in finding employment in their fields or choose to go on to further training.

- Most institutions have a single tuition rate, so that tuition is not tied to program costs. At CU-HSC, rates are differentiated to some degree between programs and levels.
- Given the wide range in costs, tuition policies and rates would need to change substantially at most institutions if a decision were made to proportionately relate tuition rates to individual program costs.
- Student demand exceeds the capacity in the majority of the health care programs.
- In programs where student demand, employment opportunities and starting salary levels are strong, expansion may be appropriate and, in some instances, may be appropriately financed through higher tuition rates.
- Graduates of most of the health professions programs must pass a national and/or state licensing examination before beginning or establishing themselves in a professional career. Programs are effective in preparing most students for success in these licensing examinations.
- Health professions programs prepare graduates for specific careers. Most

OVERVIEW OF PROFESSIONAL HEALTH EDUCATION

COSTS AND REVENUES

Tables 1 and 2 show program cost and revenue information; table 1 for CU-HSC and Table 2 for other institutions. Table 3 shows tuition rates for each of the degree programs in this report.

While CU-HSC is dedicated in its entirety to health professions programs, other institutions offer health and other unrelated degree programs. Therefore, CU-HSC could determine total costs related to training students, while other programs identified the direct costs of each program. Costs incurred elsewhere at these other institutions in training their health professions majors, such as general education or chemistry courses taken by a nursing student, are not included because they could not be isolated. All institutions included an average per student overhead allocation in the reported costs.

CU-HSC allocated its tuition and fee revenues to degree programs based on actual collections from students in each program. The other institutions based tuition and fee revenues on full-time student equivalents taking courses in each program area. For example, a nursing program may have 500

students (headcount) who major in nursing. Because these students take courses in other disciplines, not all the tuition and fee revenues they generate can be deemed to cover the costs of the nursing program. Also, other students not majoring in nursing may take some of the classes offered in the nursing program.

These varying methodologies assured that CU-HSC and the other institutions generated cost and tuition and fee revenue information with internal consistency. This information, however, is not comparable between CU-HSC programs and those at the other institutions.

Several programs conduct clinics which incur costs and generate clinical revenues. These clinics are a significant part of the overall educational program for these programs. Students receive part of their training by working and gaining hands-on experience in these clinics. CU-HSC allocated clinical revenues generated to each degree program, as did the Communications Disorders program at the University of Colorado at Boulder. Other programs felt it was more appropriate to exclude clinic revenues and costs from their information. CU-HSC includes these practice plan costs and

revenues in Table 1. Table 2 includes clinical costs and revenues for the University of Colorado program and notes instances where programs have clinics but chose to exclude them from the calculations. Table 3 shows the tuition rates for each of the degree programs in this report.

For all of the above reasons, this report does not calculate overall or average numbers indicating the degree of student and state cost sharing for the health professions programs. Revenues, calculated as explained here, cover program costs ranging from a low of 14.5 percent in one of the community college practical nursing programs to a high of 71.2 percent for a multi-level program at the University of Northern Colorado. At CU-HSC, tuition and fee revenues cover from 11 percent of costs in the School of Medicine, to 19 percent in the School of Pharmacy. Because of clinical and other revenues allocated to the various CU-HSC programs, the General Fund support ranges from 77 percent for the School of Pharmacy, to 37 percent for the School of Medicine.

STUDENT DEMAND

Programs accept a wide range of qualified applicants for the health professions programs covered in this report. An extreme is the Genetic Counseling program at the Health Sciences Center, which reports accepting only 1 percent of qualified applicants. More common are programs which accept from 15 percent to 50 percent of qualified applicants. This strong student

demand for programs, linked with strong employment opportunities and salaries for graduates, indicates an opportunity to review the need to expand some of these programs and possibly increase student tuition rates, as appropriate, to fund part of such expansion. Table 4 summarizes information provided by each of the programs regarding student demand, success of students in passing licensure examinations, and job placement rates.

LICENSING EXAMINATION RESULTS AND EMPLOYMENT OPPORTUNITIES

Based on the information supplied by each of the programs most of the health professions programs are effectively preparing students to pass required national and/or state licensing examinations. The reported pass rates range from 75% to 100%, with the great majority of programs reporting pass rates at or above 90%.

Programs also submitted information regarding placement of graduates. This information indicates a high success rate in placing graduates into jobs in their fields or preparing them for more education, including graduate education. Placement rates reported for the programs range from 70 percent to 100 percent, with the large majority of programs reporting rates at or above 90 percent.

ARTICULATION, COOPERATIVE AGREEMENTS AND RESOURCE SHARING

Nursing programs, which are offered at all levels through the range of degree programs, are highly articulated via the Colorado Nursing Articulation Model, which sets standard requirements for the progression through levels of nursing training in the State of Colorado. In addition, the dental assisting and dental hygiene programs work within a state articulation agreement.

Beyond these overall agreements, the program profiles and other materials submitted for this report show a wide range and variety of cooperation and resource sharing within and between institutions, and with public and private sector entities and even other states. Following are some examples of such cooperative, resource-sharing arrangements (this is not a comprehensive list):

- The Colorado State University occupational therapy program has an articulation agreement with two-year occupational therapy assistant programs at three community colleges (Arapahoe, Morgan and Pueblo).
- Adams State College has medical technology clinical partnerships with Parkview Hospital in Pueblo and Penrose Hospital in Colorado Springs.
- The University of Northern Colorado uses affiliate faculty (physicians, clinicians and educators from the community) in several of its communication disorders programs. The University of Northern Colorado also has a partnership with Wyoming to expand recruitment, education and retention of primary care mid-level nursing clinicians in rural and under served communities.
- The Health Sciences Center reports wide use of community clinical settings for students; providing core science courses taught by the School of Medicine to students in all its programs needing these courses; working with the other University of Colorado campuses and with Colorado State University and the University of Northern Colorado on a common core of electronic library information and knowledge resources on all campuses and via remote access; establishing a program for students to earn joint health professional and business administration degrees with the University of Colorado-Denver; and providing access to courses at all other University of Colorado campuses for Health Sciences Center students.
- The community colleges report participation in nursing, dental assisting and occupational therapy articulation agreements preparing graduates for

further study, and clinical experiences in the community for many of the programs.

These cooperative, resource-sharing arrangements should be encouraged to continue and expand to additional areas.

CONCLUSIONS

Costs, revenues and state support vary widely within and between institutions and programs. Most institutions have a single tuition rate for all programs they offer. As a result, tuition policies and rates would need to change substantially at most institutions if a decision were made to relate tuition rates closely to the costs of individual programs.

Some of the health professions programs offered by Colorado's public higher education institutions are unable to accommodate significant student demand for training even in fields where employment opportunities and salary levels of graduates are strong. For such programs, expansion may be appropriate and, in some instances, may be appropriately financed through higher tuition rates.

The health professions programs fill a significant need in providing health care workers for the state and its communities. Cooperative relationships between the programs and the state's communities are strong and should be the basis for further examination of program need and state support.

REPRODUCTION BASIS

This document is covered by a signed "Reproduction Release (Blanket)" form (on file within the ERIC system), encompassing all or classes of documents from its source organization and, therefore, does not require a "Specific Document" Release form.

This document is Federally-funded, or carries its own permission to reproduce, or is otherwise in the public domain and, therefore, may be reproduced by ERIC without a signed Reproduction Release form (either "Specific Document" or "Blanket").
