ABSTRACT

This evaluation report summarizes data collected from pupil questionnaires, teacher questionniares, and parent interviews on the success of a recently implemented elementary school reorganization plan designed to enhance academic achievement. Five evaluation instruments were developed as a collaborative effort of teachers, parents, evaluators, and district staff, and were administered in October of 1973 and again in May of 1974. The five measures were designed to collect the following data: (1) measure of the school's climate as indicated by student attitudes (Pupil Questionnaire, Student Questionnaire Upper Elementary Level, Student Questionnaire Lower Elementary); (2) information indicating how parents of Webber School children feel about their school (Parent Interview Form); (3) information regarding growth in basic skill areas of math and reading (Base Math Test, Stanford Diagnostic Reading Test); (4) staff perceptions of the extent to which reorganization was implemented according to plan (Webber Teacher Questionniare); and (5) effectiveness of special education organization in eliminating stigma associated with children receiving special services (Sociometric Data Questionnaire). A sample of each of the questionnaires and interview forms is contained in this evaluation report, along with a graphical representation of the results. (CS)

#### EVALUATION - WEBBER SCHOOL Urbana, Illinois July, 1974

The Webber School faculty developed a complete reorganization plan during the 1972-73 school year. This plan became operational in September, 1973.

The reorganization was proposed in order to humanize the school environment of Webber School and to reverse the downward trend in academic achievement. The Webber Faculty proposed that a radical change in the school's organization and programs be made. The facets of the program proposal are as follows:

- I. That Webber School be reorganized to achieve a classroom-teacher-pupil ratio of one to fifteen. In order to achieve such a ratio, classroom teachers will assume tasks now performed by supportive personel.
- II. That each full-time certificated person, with the exception of the Principal and the Librarian, assume responsibility for establishing and maintaining an on-going personal relationship with the fifteen children assigned to them. Resultant grouping shall be heterogeneous.
- III. That self-contained classes may exist during the first month of school as an adjustment period for the purpose of building rapport and establishing stable learning environments.
- IV. That there shall be common planning and consultation time for all teachers following the student's day.
- V. That there be employed a sufficient number of special education persons to meet the needs of all children, who because of social or learning problems, are unable to make constructive use of the school experiences as defined in the School Code.
- VI. That the special education program be integrated within the standard program in such a manner that the children will no longer suffer from the stigma associated with labeling and isolation. Further, that this shall constitute a first step toward compliance with the innovative concept in special education of a "zero reject model."
- VII. That there be implemented programs which take into consideration the various learning styles of children.

Å

- VIII. That through in-service training all certificated personnel be trained in techniques and skills designed to improve inter-personal relationships.
- IX. That the present lunchroom setup be abandoned in favor of one which requires that each teacher be with the fifteen children assigned to her. This is to be an educational experience rather than a babysitting service.
- X. That the length of the school day shall be the same for all children in attendance at Webber School, with the exception of kindergarten children.
- XI. That in order to make more efficient use of available classroom materials, there be employed an instructional program secretary whose main function shall be to inventory, organize, catalog and disseminate such materials.

At the time that the reorganization was put into operation (September, 1973) the faculty also was concerned with the development of an evaluation plan. With the assistance of the Assistant Superintendent for Research and New Program Development of the Urbana Schools and graduate sutdents and faculty from the University of Illinois participating in a special seminar established to involve students in school initiated projects, a plan was initiated.

To carry out the evaluation plan, simple instruments and data gathering procedures were developed to meet the unique needs of the faculty with emphasis on relevance and immediate feedback. The staff members involved in setting up the plan are continuing to give support to the development of procedures and organization of data. Though the instruments and procedures may not appear to be as sophisticated as many prepared by the test publishers, they have the advantage of being developed and prepared by teachers who are seeking answers to questions thay are asking. This plan is viewed as an evolving process with questions continuing to be presented and improved techniques being developed to provide data which might be used to support answers.

A description of evaluation in the Urbana Schools (pp.3-6) precedes the Webber evaluation plan. The Webber evaluation report serves as an example of the building level component of the Urbana School's evaluation process.

Without the cooperation and assistance of the total Webber faculty, graduate students Lynette Long, Lucia French and Ernest Goetz and Dr. Thomas J. Long, Associate Professor, Educational Psychology along with several other faculty and graduate students it would not have been possible to conduct this comprehensive report.

:=

Rationale Statement:

(as presented to board of education 6-5-73, with modification made for the Program Plan submitted in compliance to A-160, 12-18-73)

The Urbana Schools recognize that a major task of an evaluation program is the job of reporting what persons, programs and schools are trying to do. Therefore, much of the emphasis in evaluation is concerned with helping participants at all levels (students, teachers, parents, administrators, board members) to report what it is they are attempting to do. This initial purpose of evaluation is seen as basic to the succeeding phases which are concerned with determining the nature and worth of what is being done. Part of this task has already been completed in Urbans with the community's involvement in establishing broad Student and System Goals. This task is never fully completed, however, since the community is constantly changing both in terms of its needs and values. Frequent endeavors must be carried out in the form of needs surveys or other techniques which determine these changes and help to reflect them in the goals established for the schools. In order to provide evaluation that is helpful in making decisions, participants at all levels will need to be assisted by the Assistant Superintendent for Research in describing what it is they are attempting to do. This involves much more than stating objectives in an appropriate space. Describing what one hopes to do can be accomplished in several ways, many of which avoid the prevalent criticism that stating what one does in terms of behavioral objectives tends to promote sterile nonproductive teaching.

The second phase of evaluation involves the preparation of answerable and relevant questions which reflect the concerns of those making decisions at all levels. Often questions asked of evaluators are ambiguous or for other reasons unanswerable. Participants need assistance in developing appropriate questions. The Assistant Superintendent for Research will assist in the formulation of these questions and by August, 1974 a partial list will be completed.

Once this has been accomplished, instruments and techniques are usually available to answer a wide variety of questions in the areas of diagnosis, assessment of needs, measures of change, review of related data, etc. The value of an evaluation program for the schools is related to its ability to utilize it to best answer its answerable questions.

To reach decision makers at all levels, the Urbana School's plan for evaluation is organized on four levels. These are as follows:

- 1. Districtwide assessments those assessments which relate to districtwide concerns. •
- 2. Building level assessments those assessments which relate to the unique evaluations for each building.
- 3. Program and/or individual teacher assessments those assessments which relate to programs within buildings and to pilot programs and the teacher evaluation of each.
- 4. Individual pupil assessment those assessments which deal with individual pupil growth, diagnosis, interest and personality measures applied to individual students.

Though Urbana's evaluation plan utilizes many tests, instruments and other data gathering techniques, it does not mandate certain testing programs or other broad programs except as these are needed to answer the concerns or questions developed at each level. This plan provides an open-ended system which permits the continuing development of questions to be answered. It does not provide for testing except where it is needed to answer appropriate questions.

Under the direction of the Assistant Superintendent for Research, some district level questions along with possible evaluative procedures which might be used to answer them have been developed. A first attempt at designing a building level plan of evaluation is in process and will be completed by June, 1974. A plan for two additional buildings will be completed by June, 1975. Individual pupil assessment is a continuous process with the pupil service personnel evaluating pupils who are referred by the classroom teacher.

General Description of Evaluation Plan (as presented to board of education 6-5-73)

Urbana's plan for evaluation is organized on four levels. These levels are:

- 1) districtwide
- 2) building including special education programs
- 3) program and/or individual teacher concerns
- 4) individual pupil

Each of the four levels is concerned with different kinds of evaluation for different purposes. This plan provides an open-ended system which permits the continuing development of quections to be answered. It does not provide for testing and/or the use of other evaluation techniques except where they are needed to answer appropriate questions.

#### Districtwide Concerns

#### Questions Which May be Asked

- How does the community perceive its schools? What does the community expect of its schools? (needs assessment)
- 2. How is the community changing demographically?
- 3. What is the entry level of children coming to school? How do school populations differ in entry levels?

4. How do students (particularly at the secondary level) feel about their schools?

#### Possible Evaluation Procedures

- Districtwide meeds assessment and other similiar techniques for gathering opinions. Development of Districtwide Goals.
- 2. Data systematically gathered from all students as they enter the schools and updated as changes occur.
- 3. The ABC Readiness Inventory or a similiar instrument administered to all kindergarten children during the first two months of school. This test provides a readiness age for children entering school making it possible to determine different levels of entry for each school and different groups.
- 4. The use of attitudinal measures, self-concept measures and other measures relating to the effective domain to be reviewed for use on a districtwide basis. To date, measures of this nature seem more appropriate at the building and/or teacher level.

5. How effective is the district in teaching children how to read? Who are the children who are not able to read by age 10?

- 6. How do the students in Urbana compare to others and one another on the basis of normative tests? (This is the type information frequently requested by funding agencies, State Departments, etc.)
- 5. A complete reading test individually administered to all children beginning their fifth year in school (early grade 4). Two measures to be used, one by the school psychologist, the other by the classroom teacher. This testing to determine the number of children who are reading below levels found to be satisfactory for this age group as well as the number of children who are reading at levels well above what is regarded as average for this age group. A complete follow-up of all those significantly below level used to determine the type of deficiencies, programs in use, other help that can be given, etc.
- 6. Some standard achievement testing to be continued across all age levels. The following considerations have gone into the recommendations for achievement testing:
  - (a) The program must provide the type of information likely to be requested from the community, state, and federal levels, while also meeting the needs and objectives of the Urbana Schools.
  - (b) The program must provide information for as many age levels as possible.
  - (c) Costs of the program must be held to a minimum.
  - (d) Pupil and teacher time must be held to a minimum.
  - (e) The program must provide information concerning: The growth (or changes) evidenced across age levels. The changing characteristics of the population served by the -Urbana Schools.

A recently proposed program for achievement testing will meet the purposes specified above. In addition, a sampling of students (rather than testing everyone) will reduce the costs of the program without sacrificing necessary information. This will leave much of the testing budget available for use at other levels.

#### Building Level Concerns

This level includes special education programs, i.e. E.M.H., B.M.C., Type A, B and Title Programs

The principal and staff of each building is to develop a evaluation plan to meet the needs for information unique to the building. The district office of research and development is offering assistance to each building as it develops a plan. This assistance will not only include the limited staff of the research office but will also provide consultant service, members of the Psychology and Ed. Psychology staffs of the University of Illinois, graduate students affiliated with the School Community Seminar directed by Don Holste, and other resources available within the budgetary limitations of the research and development budget. Periodic reports will be prepared indicating the progress made by each building in establishing its evaluation plan.

ERMS pilot schools are establishing evaluation plans as part of their commitment to the project.

Special education programs are continuing to follow their established evaluation procedures. In most cases, continued funding is dependent on these procedures.

Questions To Be Answered At The Building Level Might Include:

- How do parents perceive the school its strengths - its weaknesses?
- 2. In what way is the population of this school changing?
- 3. What is the entry level of children coming to this school?
- 4. What progress can be substantiated for students in this school in the basic skill areas?
- 5. How successful are the students who leave this school in their next level of education or the world of work?
- 6. How do children in this school feel about schools, their teachers, about themselves, and their ability to be successful in school?
- A sample building level plan developed by Webber School in Urbana is attached.

To assist the Webber faculty in gathering data to provide information in the five areas specified in the evaluation plan, the following instruments were developed with accompanying procedures carried out. Pages 10-11 summarize the procedures with copies of instruments and summaries of data on the pages that follow.

#### 1.1 Measure of the school's climate as indicated by student attitudes

The following instruments were developed by the school's office of research with the involvement of the Webber faculty.

- A. Webber School Pupil Questionnaire administered in October, 1973 to 15 classrooms and May 1974 to 12 classrooms made up of children ages 7-12. <u>Copies and summary of results attached</u> (pp 13 to 31)
- B. <u>Student Questionnaire Upper Elementary Form</u> administered in October, 1973 to 12 classrooms made up of children ages 8-12. <u>Copy and summary of results attached</u> (pp 32 to 36)
- C. <u>Student Questionnaire Lever Elementary Form</u> administered in October, 1973 and May, 1974 to 6 classrooms made up of children ages 6-8. <u>Copy and summary of results attached</u> (pp 37 to 40)
- 1.2 <u>Information indicating how parents of Webber School children feel about their</u> <u>school</u>

With the involvment of the Webber faculty, a group of Webber parents, the research and development staff of the district and several staff and student members from the University of Illinois, an extensive parent questionnaire was developed to be used by interviewers in the Webber School community. <u>A</u> <u>copy of the questionnaire is attached along with summary data</u>. (pp 42 to 50) A random selection of one third of the families having children at Webber were chosen for the interview. Their homes were visited during May 1974. All teachers at Webber were interviewed at the same time, using an instrument similar to that of the parents seeking teacher's perceptions and expectations as to how parents would respond. This instrument along with a summary of significant responses is also attached. (pp 51 to 64)

#### 1.3 Information regarding growth in basic skill areas of math and reading

The Base Math Test was administered to all children in grades one through six. An individual profile sheet was developed for each child and a skill profile was provided for each classroom. The first test was administered in October, 1973 with a post test given in May, 1974. A comparative skills profile has been developed for each child indicating the skills mastered throughout the year. Summaries of gains made in terms of the skills mastered are attached. (pp 68 to 71). The Base Math Test was written by Lola May and Vernon Hood, and published by Media Research Associates. It is a diagnostic test designed to measure basic skill mastery for 16-23 skills generally expected to be mastered at each age level.

The Stanford Diagnostic Reading Test was administered to all children in grades three through six in May 1973 and May 1974. <u>Summaries of the scores obtained at</u> these times of measurement are attached. (pp 66 to 67).

In addition, a series of reading tests were administered to all children eligible to receive special education services. <u>Summaries of these test data can also be</u> found in the pages attached. (p. 72)

1.4 <u>Staff perceptions of the extent to which recr<sub>k</sub>enization was implemented according</u> to plan. Also strength, weaknesses and problems as perceived by the Webber staff.

Webber Teacher Questionnaire - Part I and II - administered to the entire staff in December, 1973 and May 1974. <u>Copies of the questionnaire and summaries of responses are attached</u>, (pp 74 to 90)

1.5 <u>Effectiveness of special education organization in eliminating stigma associated</u> with children receiving special services.

> Sociometric Data Questionnaire - administered to all children in November, 1973 Copy attached (p. 92)

An analysis of the sociometric data was carried out to determine to what extent special education children are seen as being different from other children in the school. <u>Summaries of findings are attached</u>. (pp 93-to 94)

GENERAL COMMENTS:

This report was written primarily as a direct report to the staff at Webber School. Little interpretation of data is provided. Data gathered in each of the five areas is included along with the instruments, used to gather the data. A content's page proceeds each area on page 12.

11. I like eating in my classroom 12. I like eating in the lunchroom alot alot some some very little very little not at all not at all I think my father likes me 13. I think my teacher likes me 14. alot alot some 50**110** very little very little not at all not at all father not at heme 15. I think my mother likes me 16. I think my classmates like me alot alot some some very little very little not at all not at all mother not at home 17. I think my teacher cares about me 18. I like my classmates almost all of them alot some of them **SOM**0 very little a few of them none of them not at all 20. I think my classmates like me 19. I like my teacher almost all of them always usually some of them a few of them sometimes none of them almost never 6 10/73 Webber - L. Long

 A summary of the responses on the Webber School Pupil Questionnaire from 15 classrooms (182 children) in October 1973 and from 12 of these classrooms (162 children) in May 1974 is found on the pages that follow. A summary for the entire group, the 12 classrooms tested both in October and May is followed by the responses made by children in eath of the classrooms. The age group represented covers grades 2-6. The following numerical weightings were given to each response:

|      | a lot  | = | 3 |
|------|--------|---|---|
|      | some   | = | 2 |
| very | little | Ŧ | 1 |
| not  | at all | * | 0 |

In comparable studies (Asher) it was found that the position level at which children respond tends to go down beginning in mid winter and reaches its lowest level shortly before school closes for the summer. A school scoring as high in May as in October is one that has made significant gain when compared to general school populations. There were no significant changes in the Webber pupil scores, therefore, it can be assumed that gains were made throughout the year. The October composite scores were already quite high, probably being affected by the implementation of the new program six weeks prior to taking the measure. The second composite score also reflects a high positive attitude toward school.

Response to question #12 (regarding the lunchroom) was seeking a low score in that eating in the lunchroom was eliminated under the new program. Response to #11 was high supporting the change.

Responses to question #7 (math) and #8 (reading) were both low in October and in each case a higher score was achieved in May. Considering the time of year the second test was given, this gain is seen as being very significant.

Each teacher has been given an identity number so that he or she is able to review individual responses and those on the composite.

. . . . .

#### Summary for 12 classrooms grade 2-6 in October, 1973 and for these same rooms in May 1974

Here is a list of some statements that describe life in the classroom. Circle the letter in front of the statement that best tells how you feel about this class. There are no right or wrong answers.

. •

1. Life in this class with your regular teacher has

- a. all good things
- b. mostly good things
- c. more good things than bad
- d. about as many good things as bad
- e. more bad things than good
- f. mostly bad things

2. How hard are you working these days on learning what is being taught in school?

- a. very hard
- b. quite hard
- c. not very hard
- d. not hard at all

3. When I'm in this class, I

a, usually feel wide awake and very interested

b. am pretty interested, kind of bored part of the time

c. am not very interested, bored quite a lot of the time

d. don't like it, feel bored and not with it

4. How hard are you working on schoolwork compared with the others in the class?

- a. harder than most
- b. a little harder than most
- c. about the same as most
- d. a little less than most
- e. quite a bit less than most

5. How many of the pupils in this class do what the teacher suggests?

a. most of them do b, more than half do c. less than half do d. hardly anybody does

6. If we help each other with our work in this class, the teacher

a. likes it a lot b. likes it some c. likes it a little d. doesn't like it at all

- 7. How good is your schoolwork compared with the work of others in the class?
  - a. much better than most
  - b. a little better than most
  - c. about the same as most
  - d. not quite as good as most
  - e. much worse than most

8. How often do the pupils in this class help one another with their schoolwork?

- a. most of the time
- b. sometimes
- c. hardly ever
- d. never

٠

9. How often do the pupils in this class act friendly toward one another?

ć

- a. always
- b. most of the time
- c. sometimes
- d. hardly ever

#### STUDENT QUESTIONNAIRE, LOWER ELEMENTARY FORM

#### Instructions

Each pupil should have a copy of the <u>Answer Sheet</u>, <u>Student Questionnaire</u>, <u>Lower Elementary Form</u> on the desk or table with a pencil or crayon to use to mark an X on the appropriate face for each question you ask. Explain to the pupils that you want them to tell you how they feel about their classooom, their teacher, their schoolwork, and their classmates.

Discuss the three faces: the first one is a very happy face; the second one is happy but less happy than the first; the last one is very sad.

Then tell the pupils that when you read question one, they are to mark an X on the face which is the most like the way they usually feel.

Example: Put three faces which are similar to those on the Answer Sheet on the board. Then ask the pupils a question, such as, "Which picture shows the way you feel about the weather today?" If the pupils feel very happy about the weather, put an X on the first face. If they feel somewhat happy about the weather, put an X on the second face, etc.

The first question is:

1. Which picture shows the way you feel about this classroom?

(Make sure the pupils make an X on one of the faces beside #1 on the answer sheet,)

. 1

Repeat the instructions for each of the other questions:

- 2. Which picture shows the way you feel about the work you do in school?
- 3. Which picture shows the way you feel about your classmates?
- 4. Which picture shows the way you feel about your teacher?

5. Which picture is most like you most of the time?

#### STUDENT QUESTIONNALRE - LOWER ELEMENTARY OCTOBER, 1973 & May, 1974

Jean Asked: . . hich pictures shows the way you feel about this classroom? (The sure the pupils make an X on one of the faces beside #1 on the answer elect) Repeat the instructions for each of the other questions: . Lich picture shows the way you feel about the work you do in school? . Which icture shows the way you feel about your classmates?

. which picture shows the way you feel about your teacher?

. Then picture is most like you most of the time?

The range of scores on the Student Questionnaire - Lower Elementary administered to six primary classrooms in October 1973 and May 1974 is +1.00 to -1.00. It is interesting to note that in several primary classrooms perfect scores of 1.00 were obtained. In three of the six classrooms 1.00 scores were achieved on question #1 indicating how children felt about their classroom.

Significant gains were made in the composite scores for all questions except #5. The composite score of .95 on question #4 regarding feelings toward teacher is extremely high and indicates a very positive relationship between the children and their teachers.

Questions of how and when to discipline students in school and at home are constantly being asked by both parents and teachers.

I am going to read some common methods used in disciplining children. Please react to each as to whether you strongly agree, agree, disagree, strongly disagree, or don't know if it is a method which: (4) (3) (2) (1) (0)

> a. you would use at home b. ought to be used at school

2

|  | a. Hom | e b. | School |
|--|--------|------|--------|
| taking away privileges                 | 99     | 1    | 108    |
| isolation (sending to room)            | 100    | )    | 109    |
| physical pun <b>ishment (spanking)</b> | 101    |      | 110    |
| talking out a solution                 | 102    |      | 111    |
| physical restraint (holding back)      | 103    |      | 112    |
| withholding of lo <b>ve</b>            | 104    | ,    | 113    |
| send to someone else for<br>discipline | 105    | ,    | 114    |
| shouting                               | 106    |      | 115    |
| ridicule (making fun of)               | 107    | ,    | 116    |

am now going to read a list of behaviors. Please react to each as to whether it should or should not be disciplined or don't know.

#### Introduction:

During the Fall Term 1973 the author, a colleague from the University of Illinois, and two graduate students met with the principal of Webber School and Donald Holste from the Office of the Superintendent of the Urbana Schools, to discuss a request from the head of the PTA at Webber School to check into what appeared to be a communication gap between Webber parents and Webber School personnel. A report completed by Decker Walker, a faculty member from the University of Illinois' College of Education published in 1973, had also indicated that communication links between Webber parents and school staff were weak.

In addition to these concerns, school personnel at Webber had initiated a revised school program at Webber in 1973. Members of the school staff were concerned how the new program was being received by parents and whether the new program had improved teacher-parent communication. Indeed, teachers at Webber had begun thinkin~ about plans for polling parent's opinions with regard to the new program before university consultants had their first meeting at Webber.

Plans were laid during the waining days of 1973 to conduct a comprehensive survey of parent and teacher attitudes on a variety of topics. The decision was made at a series of meetings to conduct the survey by personal interview of a randomly selected cross-section of Webber parents and of all Webber teachers. The review instruments were to be constructed by university personnel with the put from Webber staff, some members of the PTA and from the Urbana Schools Superintendent's Office.

In a truly cooperative arrangement, the University was to provide interviewers, questionnaires, construction expertise and analysis of the data. The Urbana schools provided travel, secretarial and supply support. Two questionnaires were developed during the period November 1973 - March 1974, one questionnaire a parent form and one a teacher form. Most questions were asked of both populations in parallel form to allow for comparison of response. Some questions were changed to reflect the special knowledge of either parents or teachers (copies of each of the questionnaire forms are attached).

The generation of a randomly selected sample of parents plus the development of parallel questionnaire forms allowed the research team to feel that any results obtained might be generalized with confidence to all Webber parents and teachers and that comparisons between Webber parents and teachers with regard to attitude might be drawn.

A team of three interviewers (all female University grad students) began collecting interviews during April 1974. The interview process took approximately one month. Interviews were collected from 57 parents and 20 teachers according to a predetermined format. Data was processed at the University of Illinois on two independent Soupoc programs: Frequency Counting and T-Tests, the latter to check for differences between means on parallel items.

Results for the two forms will be reported here independently to assure optimal reporting of the results. Significant results and comparisons will then be discussed in a separate section.

#### Results Obtained On The Parent Attitude Questionnaire Form:

In order to check that the sample drawn reflected a true racial picture of Webber School parents, the race of respondents was noted. Eighty-nine percent of the parents responding were white/caucasion, 14 percent black/negro/afro-american and 2 percent were members of other races. Twenty percent of the parents responding reported one child resident in the home, 38 percent - 2 children, 11 percent - 4 children and 4 percent - 5 or more children for a total of 119 children. Of these, 81 children attend Webber.

Eighty percent of the respondents indicated that two adults were resident in the home; only 13 percent indicated one adult resident in the home, only 13 percent indicated one adult resident in the home and 7 percent noted 3 adults in the home. In homes where there was a mother, 53 percent indicated that the mother was employed outside the home and for these the mean number of hours of employment outside the home was 36. Eighteen percent of the respondents indicated that the father was <u>not</u> employed outside the home. Working fathers averaged 44 hours in employment outside the home. . -

. •

Eighteen percent of the responding parents indicated that there were regular periods each day during which their children were without adult supervision in the nome. The most frequently cited time during which these children remained unsupervised was 2:30 - 3:30 p.m.

Fifty-one percent of the children walk to school, 24 percent come by auto and 25 percent ride the bus. Only 9 percent of Webber children generally return home for lunch.

Classrooms at Webber are universally racially mixed. Racially mixed classrooms are generally accepted by parents.

More than 80 percent of Webber parents feel that they are adequately informed about both general school programs and daily school activities. This information is obtained largely from three sources (1) school staff (2) talking with children and (3) the school newsletter. The majority of parents reported that no information was obtained regarding the school from the public media, from neighbors and friends or from school meetings.

More than 90 percent of the responding parents reported that they thought the following were <u>very important</u> goals of education:

- 1. Helping students master the basic skills of reading, communication, computation and problem solving.
- 2. Encouraging a positive attitude toward learning.
- 3. Giving students a feeling of adequacy and self-worth.
- 4. Providing equal educational opportunities for everyone regardless of race or sex.

Ninety-five percent of the parents polled cited all goals of education listed in our questionnaire as important. When questioned about how well parents thought Webber school staff succeeds in accomplishing each of the educational goals listed, more than 80 percent indicated they thought Webber staff accomplished the goals well.

Weakness was noted in helping children with emotional or health problems, providing experiences which help students adapt to a changing world and providing students with opportunities in training for future work.

Seventy-seven percent of the parents thought that Webber should offer after school activities and 73 percent of these thought parents should be involved in planning and setting goals for such activities. The majority of parents thought that they should be somewhat involved in planning and setting goals in basic subject areas as well. To elaborate, the majority of parents thought they should be involved in making decisions about what is to be taught and consulted about school finances. Eighty percent thought they should be involved in making decisions about after school activities for students.

Eighty-five percent of the parents polled thought Webber school staff was doing an excellent (43 percent) or good (42 percent) job in educating their children. Sixty-three percent thought the staff was doing an excellent or good job in classroom management.

With regard to the physical plant and equipment at Webber, parents were satisfied with the classrooms and library facilities, they were less satisfied with available special equipment (projectors, etc.) or the physcial education offered.

Eighty-six percent of the · rents thought that the teaching at Webber was meeting their child's needs . . 72 percent thought their child was learning more during 1973-74 than during 1972-73.

One-third of the parents were dissatisfied with the beginning and ending times at Webber School (8:15 A.M. - 2:00 P.M.). Less than 30 percent were enthusiastic about the school hours.

Parents generally do not have to push children to attend school and more than 50 percent of the parents indicated that their children seemed to have liked school more during 1973-74 than they did during 1972-73. Forty-five percent of the parents report that their children return from a day at Webber School describing the school day with enthusiasm.

Eighty percent of the parents approve their children discussing sensitive family matters with his or her teacher. Eighty percent of the parents also agree that teachers pay enough attention to students as individuals.

One-third of the parents reporting disagree or are unsure that teachers expect the same from children regardless of race, sex or income/occupation of parents. Sixty-five percent of the parents disagree that students should be allowed to decide what activities and areas of study they (the children) will participate in during their school day.

Ninety-eight percent of the parents agree that school programs should be designed to reward students for making progress no matter how slow that progress is. A majority of parents disagree or are unsure whether adequate playground supervision is provided or whether students in Webber School have a respect for school facilities and equipment.

Seventy-seven percent of the parents agree that rules to control student behavior should be applied uniformly to all students under all situations. Sixtythree percent agree that the more noise in a school the less effective are the disciplinary procedures. Ninety-six percent of the parents agree that during schore

hours the primary responsibility for controlling the child's behavior rests on the school personnel. But 100 percent of the parents agree that they should be informed whenever their child engages in any serious or persistent misbehavior.

Seventy-three percent of the parents believe that children generally learn fighting behavior at home; however, 78 percent disagree that fighting is a useful way for children to settle their differences.

The majority of parents would use the following methods of disciplining their children at home:

• •

.

. •

- 1. taking away privileges (97 percent)
- 2. isolation (sending to room) (67 percent)
- 3. physical punishment (spanking) (80 percent)
- 4. talking out a solution (95 percent)

The majority of parents would not employ the next set of methods to discipline their children at home:

- 1. physical restraint (51 percent)
- 2. withholding of love (98 percent)
- 3. sending child to someone else for discipline (93 percent)
- 4. shouting (74 percent)
- 5. ridicule (making fun of) (94 percent)

The majority of parents agree that the following ought to be used at school to discipline children:

- 1. taking away privileges (93 percent)
- 2. isolation (sending to room) (77 percent)
- 3. talking out a solution (94 percent)
- 4. physical restraint (holding back) (66 percent)
- 5. withholding of love (64 percent)
- 6. send to someone else for discipline (78 percent)

Only shouting, ridicule and physical punishment would be denied the school staff by a majority of parents as a method of disciplining children in school.

The overwhelming majority of parents responding agreed that the items on our list of behaviors should be disciplined. These included:

throwing things cheating/lying talking out of turn not following directions

#### 241161

fighting not doing assigned tasks not sharing talking back teasing swearing (using profamity)

Eighty-two percent of the parents believe that they have sufficient information about Webber School. Seventy-three percent think they have sufficient information about what Webber School personnel are trying to accomplish. Sixty-two percent of the parents think they have sufficient information about how Webber School personnel go about accomplishing their goals.

### Results Obtained On The Teacher Attitude Questionnaire Form:

Ninety-five percent of the teachers teaching in Webber School during 1973-74 were female; 90 percent were white/caucasion, the remaining 10 percent were black. Teachers employed at Webber have taught there an average of three years. One hundred percent reported teaching a racially mixed class. Eighty percent reported liking racially mixed classes.

While 65 percent of the teachers reporting indicated that they believed parents were adequately informed regarding the school program, it is significant to note that 35 percent felt parents were less than adequately informed.

More than 90 percent of all teachers saw all the goals of education listed in our questionnaire as important. When questioned as to how well Webber School succeeds in accomplishing each of these educational goals, teachers were at times unenthusiastic. Seventy percent of the teachers thought the staff succeeded well or very well in identifying and helping children with emotional or health problems. Only 20 percent of the teachers thought they did a good job providing students with opportunities to express their creativity and special talents. Only 40 percent of the teachers felt they did a good job providing experiences which might help students adopt to a changing world. Only 45 percent thought they did a good job providing every student with opportunities in training for future work. More than 70 percent of the staff thought they were doing a good job in accomplishing all the other educational goals listed. Of special note was the strong belief among teachers that they were doing a very good job helping students master the basic skills of reading, communication, computatic and problem solving (75 percent), in encouraging a positive attitude toward learning (50 percent), and providing equal educational opportunities for everyone regardless of race (75 percent) or sex (70 percent).

Seventy percent of the teachers agreed that Webber School should offer after school activities and that parents should be involved in planning and setting goals for these activities.

Sixty percent of the teachers would not want parents to be involved in planning and setting goals in basic subject areas but the same percentage would want students involved; everybody agreed that teachers should be involved in this activity.

Fifty-five percent of the teachers thought parents should be involved in making decisions about what was to be taught at Webber School. Seventy percent thought students should be involved. Eighty percent of the teachers would not want parents involved in hiring at Webber and 90 percent would not want students involved. However, 100 percent of the teachers thought teachers should be involved in deciding who

would be hired at Webber School. Sixty-five percent of the teach...s were willing to let parents be involved in making decisions about school financial matters. But 85 percent were not willing to have students be involved. One hundred percent of the teachers thought they should be involved in making decisions regarding school financial matters. One hundred percent of the teachers thought both parents and students should be involved in decision making regarding after school activities for students. Eighty percent of the teachers thought they should be involved in these decisions.

Seventy percent of the teachers said that the staff was doing an excellent job educating the children who attend Webber. In an about face, no teacher thought parents of Webber school children were doing an excellent job disciplining their children at home.

••

.

•

The majority of teachers thought the classroom, special equipment and physical education facilities at Webber were less than adequate. Sixty percent classed only the library as excellent.

Eighty-five percent of the teachers thought children were learning more at Webber school during 1973-74 than during 1972-73. Eighty percent believed that the children in their classroom liked school better in 1974 than in 1973.

Eighty percent of the teachers liked the school beginning and ending times (8:15 A.M. - 2:00 P.M.). Here a real clash might brew between teachers and parents. A somewhat late beginning and ending time for school would probably be preferred by the majority of parents or a lengthening of the school day (8:00 A.M. - 3:00 P.M.).

Forty-five percent of the teachers were not sure how parents would react to their children if the parent found out that his/her child had talked to teachers about family matters. Thirty percent of the teachers thought parents would sometimes react negatively.

All the teachers felt they paid enough attention to students as individuals and expected the same educationally children regardless of race or sex. Thirty percent of the teachers indicated that they did not expect the same thing from children when they knew the parent's income or occupation, however.

Only 60 percent of the teachers agreed that students should be allowed to decide what activities and areas of study they will participate in during the school day.

One hundred percent of the teachers agreed that school programs should be designed to reward students for making progress no matter how slow that progress was.

Only 35 percent of the teachers agreed that playground supervision was adequate.

Sixtypercent of the teachers agreed that students in Webber School had respect for school facilities. Sixty-five percent of the teachers believed that rules to control student behavior should be applied uniformly to all students under all situations. Seventy percent of the teachers disagreed that the more noise in a school the less effective are the disciplinary procedures. Ninety-five percent of the teachers agreed that during school hours the primary responsibility for controlling the child's behavior rests on the school personnel. Just as 95 percent believed that parents should be informed when their child engages in any serious or persistent misbehavior, 55 percent of the teachers thought that children generally learned fighting behavior at home. Eighty-five percent thought that fighting behavior was not a useful way for children to settle differences however.

Full Text Provided by ERIC

-64-

When asked about methods of discipline teachers would employ at home, the following would be used by the teacher at home:

1. taking away privileges (100 percent agreeing)

2. isolation (sending to room) (80 percent agreeing)

3. physical punishment (spanking) (95 percent agreeing)

4. talking out a solution (100 percent agreeing)

5. physical restraint (holding back) (90 percent agreeing)

The majority of teachers would not use the following methods of discipline at home:

1. withholding of love (100 percent disagreeing)

2. sending a child to someone else for discipline (100 percent disagreeing)

3. shouting (70 percent disagreeing)

4. ridicule (making fun of) (95 percent disagreeing)

Teachers were a little less certain about methods of discipline which ought to be used at school, but the pattern was exactly the same as above.

The majority of teachers responding agreed that the following behaviors should be disciplined:

1. throwing things (100 percent agreeing)

2. cheating/lying (100 percent agreeing)

3. talking out of turn (80 percent agreeing)

4. not following directions (85 percent agreeing)

5. fighting (100 percent agreeing)

6. not doing assigned tasks (85 percent agreeing)

7. not sharing (55 percent agreeing)

8. talking back (100 percent agreeing)

9. teasing (50 percent agreeing)

10. swearing (using profanity) (65 percent agreeing)

Seventy percent of the teachers agreed that children in school sometimes encourage other children to misbehave. Sixty-five percent of the teachers also believe that they <u>do</u> take it out on children whose parents are critical of the school.

Sixty percent of the teachers believe tha: Webber School parents know what

Webber School is like. However, only 45 percent believe that parents know what Webber School personnel are trying to accomplish and only 30 percent of the teachers believe that Webber School parents know how the school staff is going about accomplishing their goals.

### Significant Parent-Teacher Differences

Parents, significantly more than teachers, believe that the educational system should provide every student with opportunities in training for future work.

.

•

•

While both parents and teachers are positive about the educational system's accomplishments in the area of teaching basic skills of reading, communication, computation and problem-solving, to a significant extent teachers believe they are doing a better job teaching these skills than do parents.

The Webber School staff is generally less satisfied with the opportunities offered to Webber School children to develop their creativity and special talents. To a significant degree, parents are more satisfied.

When questioned about involvement in key decisions related to the operation of Webber School, parents and teachers were in generally close agreement on most ISSUES. The majority of parents (58 percent) indicated a desire to be involved in what was taught. Teachers agreed (55 percent). Everybody thought teachers should be involved. A majority of parents thought parents should not be involved in hiring decisions (51 percent), teachers agreed (80 percent). One hundred percent of the teachers thought that they should be involved in hiring decisions. A significantly smaller percentage of parents (64 percent) thought teachers should be involved.

Eighty percent of the teachers indicted that they were very pleased with the current beginning and closing times of the school day at Webber. Only 29 percent of the parents indicated they were very pleased. There is a significant difference between parents and teachers on this question. Parents indicating much less satisfaction than teachers.

Seventy-nine percent of the parents approve or strongly approve or their children talking to a teacher about family matters, even sensitive ones. Teachers were very cautious in assuming this. Only 25 percent indicated they thought parents would seldom or never react negatively to their children if the parent found out that the child had talked to teachers about family matters. A significant difference.

For the following three topics, while parents were still positive in their opinion of the Webber staff, they were significantly less positive than were the teachers:

- 1. Teachers pay enough attention to students as individuals
- 2. In general, teachers expect the same thing educationally from all children regardless of race and
- 3. Regardless of six

•

The majority (65 percent) of Webber parents disagree when asked whether Webber students should be allowed to decide what activities and areas of study they will participate in during this school day. Sixty percent of the teachers believe that students should decide these matters, a significant difference.

-64B-

While both parents and teachers agreed, teachers held more firmly to the following statement than did parents: "School programs should be designed to reward students for making progress no matter how slow that  $p_{1}$  is is."

Sixty percent of the teachers agreed that Webber students had a respect for school property, only 45 percent of the parents agreed, a significant difference.

Sixty-three percent of the parents agreed that "The more roise in a school the less effective are the disciplinary procedures." Seventy percent of the teachers disagreed with this statement. A significant difference.

While both parents and teachers agreed as to where responsibility for controlling the child's behavior rested during the school day, teachers felt the weight of this responsibility to a much more significant extent than did parents. Parents, significantly more than teachers, agreed that children generally learn fighting behavior at home. Moreover, parents, significantly more than teachers, leaned toward fighting as an although generally disapproved, nonetheless useful, way of settling differences.

Parents and teachers generally agree on which disciplinary methods they would use at home. There are exceptions, however. Ninety percent of the teachers would use physical restraint (holding back) as an appropriate disciplinary measure at home. Only forty-nine percent of the parents would agree. There are several points at which parents and teachers differ when it comes to disciplinary measures which might be used at school. In most cases it is a matter of emphasis rather than conflict. There are two methods upon which parents and teachers directly disagree. The majority of parents (65 percent or more) see as appropriate inschool discilinary measures 1) withhelding of love and 2) sending the child to someone else for discipline. Methods the parents would not use in their own home. Ninety percent or more of the teachers disagree.

Our list of punishable offenses was accepted as punishable by both parents and teachers. No significance between group differences were noted except for swearing. Parents were much less tolerant of the use of profanity than teachers.

Significantly more teachers thought the following statement true than parents: "Being good and getting good grades generally leads to other children disliking you."

Significantly more Webber teachers thought the following statement true than Webber parents, "Teachers take it out on children whose parents are critical of the school."

Webber teachers and parents alike believe that Webber parents generally have sufficient information about Webber School. However, the majority of Webber teachers do not believe that Webber parents know what the school personnel are trying to accomplish nor how the school personnel goes about accomplishing their goals. The majority of Webber parents disagree.

#### Conclusions

Both parents and teachers are positive in their overall rating of Webber School staff with regard to educating the children enrolled. Eighty-five percent of the parents interviewed reported that the school staff was doing an excellent or good job. Ninety-five percent of the teachers agreed.

-64C-

09963

Seventy-two percent of the parents and 85 percent of the teachers felt that children learned at least <u>some more</u> during the 1973-74 school year than they learned during the 1972-73 school year. The majority of both groups felt that the children liked the school the same or better during 1973-74 than during 1972-73.

In general, attitudes concerning schooling at Webber are shared by both parents and teachers. Parents are generally favorable toward Webber School and its staff. They are also very interested in being involved with the school when they think their input will have impact and if the demands on their time do not interfere with their work schedules. Opportunities for personal dialogue between teachers and parents are desired but not sufficiently provided for. This lack of personal exchange serves to maintain a kind of reserve on the part of parents and fosters some misperceptions on the part of teachers. Our interviewers will tell you that they were almost without exception cordially received in nice homes by polite people interested in their children and their children's education.

The length of the school day should be rethought. If the day is not lengthened to cover the period 8:00 A.M. to 3:00 P.M., then it might be advisable to move the time for beginning til 8:30 A.M. with closing at 2:30 P.M. A third alternative would be to provide after school activities in which children, who might regularly return to an unsupervised home, could participate.

It is further our opinion that the Webber teachers are not well known to Webber parents as people. This shows up in the uncertain responses given by many p. ents when asked to give an opinion regarding teacher behavior or teacher attitudes affecting behavior. Teachers are not well versed in the life style of Webber parents. Home visitations would be helpful to teachers and welcomed by parents. Student opinions about personal issues are not polled enough. Career education is lacking at Webber as are sufficient opportunities for students to express their creativity and special talents and the playground lacks adequate supervision. But in general, Webber is growing in a positive direction. Things are better this year than last and could be better still if the school staff took the initiative to involve themselves directly with parents of the children they serve. You know, maybe those pot luck suppers, carnivals and raffles had some good effect at that.

> Thomas J. Long University of Illinois September, 1974

÷

The Stanford Diagnostic Reading Test was given to all children in grades 2-6 at Webber in May 1973 and May 1974. Scores obtained in the reading comprehension and vocabulary sections of these tests are compared to determine gains made during the year.

#### TABLE 1

MEDIAN GRADE EQUIVALENT SCORES FOR CHILDREN IN GRADES TWO THROUGH SIX IN MAY 1973 AND MAY 1974 ON THE STANFORD DIAGNOSTIC READING - COMPREHENSION TEST.

A gain of 1.0 is expected from children who scored at or near grade level on the pretest. Children scoring below grade level on the pretest generally have a more difficult time to make a full year's gain in one year. All groups made a gain of one year or more in comprehension as measured by this test.

All children at each level were tested but only the scores of those children who remained at Webber during the entire period were used in the comparison. As indicated on Table 2, on the pretest more than 75% of all children scored below their grade norm, making it extremely difficult to make an average gain of 1.0. In May, 1974 the percent scoring below the norm was reduced to 62, a reduction of 13% for children who would be predicted to gain less than a full year.

. . . . . 79

| ·                | . May 1973 May 1974 |
|------------------|---------------------|
| Grade Two        | 67%                 |
| Grade Three      | 85% 67%             |
| Grade Four       | 877. 697.           |
| Grade Five       | 687. 507.           |
| Grade Six        | 64%                 |
| Total Grades 2-6 | 777. 627.           |

PERCENT OF CHILDREN SCORING BELOW EXPECTED GRADE LEVEL ON THE STANFORD DIAGNOSTIC-READING COMPREHENSION TEST

Except for the grade two, 1973 cohort, all groups made a mean gain of more than one year in reading comprehension as measured by the Stanford Diagnostic Reading Test.

Reading vocabulary scores are presented by the SDRT in terms of stanines. A stanine is a value on a simple nine-point scale of standard scores. Scores are expressed along a scale ranging from 1 (low) to 9 (high) with the value 5 always representing average performance for pupils in the reference group. A reference group is established for each grade level. Table 3 indicates the mean stanine for each of the reference groups in vocabulary.

## TABLE 3

## MEDIAN SCORE FOR READING VOCABULARY IN STANINES AS OBTAINED ON THE STANFORD DIAGNOSTIC READING TEST

|             | May 1973 May 1974 |
|-------------|-------------------|
| Grade Two   | :43               |
| Grade Three | 4 4               |
| Grade Four  | 4 4               |
| Grade Five  | 4 4               |
| Grade Six   |                   |

As indicated earlier, for reference groups scoring below the norm (staning of less than 5) it is extremely difficult to make a years growth in one year. The same factors causing a low score initially are continuing to make it difficult to make average growth. The stanines in Table 3 indicat. that approximately one years growth was made by all groups.

19073

-67-

The <u>Base Arithmetic Skill Evaluation</u> (BASE) testing system developed by Media Research Associates and written by Lola May and Vernon Hood was used as a pre and post measure of mathematics skills for all children at Webber in grades 1-6. The tests were administered in October 1973 and May 1974. BASE identifies basic entry level skills a student must have if he is to perform effectively at his grade level. From 16-23 skills are identified at each level permitting each teacher to identify the skills to be taught each child. The number of skills mastered in October and May by the children in grades one through six are presented in tables 4 to 9 below.

## TABLE 4

NUMBER OF SKILLS MASTERED BY FIRST GRADE CHILDREN AS MEASURED BY THE BASE MATHEMATICS TEST USED AS PRE AND POST MEASURE

NUMBER OF SKILLS MASTERED BY SIXTH GRADE CHILDREN AS MEASURED BY THE BASE MATHEMATICS TEST USED AS PRE AND POST MEASURE

= Median Score

It is difficult to assess the significance of the gains made. All grade levels made substantial gains indicating that many new math skills were acquired. Children mastering fewer than 10 skills are seen as having difficulty working with their age peers in math activities. As indicated in Table 10, 16 of the 178 children given pre and post tests completed the year with fewer than 10 skills at their level. The fourth grade group had the highest number of children with fewer than 10 skills both pre and post.

#### TABLE 10

The children who were identified as eligible for special education services, educationally handicapped or learning disabilities, were given the Bond, Balow, Hoyt Silent Diagnostic Reading Test. The expected standard of success was one month's growth in achievement for each month of instruction, based on pre-and post-dates. The pretests were given in November, 1973, post-tests were given in May 1974. Elapsed time - 6 months. In order for each child to equal or surpass the standard he/she must make at least 6 months gain.

#### SUMMARY

The Webber School Project served a total of 79 eligible special education students (43 educationally handicapped and 36 learning disabled). The range of achievement growth was 0 months to 2.7 years. The average achievement growth was 1.0 years during the six calendar months. Of the 79 special education children served 69 equaled or surpassed the standard and 10 children failed the standard.

The enrollment of Webber School for the 1973-74 school year was 266. Of that number 79 or 29.7% received special education in either educationally handicapped or learning disabilities.

WEBBER TEACHER PERCEPTIONS OF THE DEGREE OF IMPLEMENTATION AND PRIORITY OF NEEDS RELATED TO THE REORGANIZATION OF THE SCHOOL AS PLANNED DURING THE 1972-73 SCHOOL YEAR

#### (revised 12/5/73)

Please respond to the following statements indicating your personal observation regarding the degree to which each has been implemented. Use the following scale for your response.

÷.,

ſ

4

L

- 5 = Completely implemented 4 = Partially completed - adequate for this time in the year,  $\cdot$ 3 = Started, but not as far along as I feel it should be 2 = Not yet started, but planned to begin ł 1 = Not much hope of being implemented 0 = No longer appropriate - dropped from the program
- ? = Don't have information to make a judgment

| PLANNED FOR WEBBER REORGANIZATION DURING<br>SPRING OF 1973 |   |   | DEGREE OF<br>IMPLEMENTATION |   |   |   |   |   | ION |
|--|---|---|-----------------------------|---|---|---|---|---|-----|
| 1.   | A classroom teacher-pupil ratio of<br>no more than 1:15.  |   | 5                           | 4 | 3 | 2 | 1 | 0 | ?   |
| 2.   | You as a teacher assuming responsibility<br>for establishing an on-going personal<br>relationship with each of the children<br>assigned to you. |   | 5                           | 4 | 3 | 2 | 1 | 0 | ?   |
| 3.   | Heterogeneous grouping in each class-<br>room by race, sex, special and non-<br>special education pupils.                                       |   | 5                           | 4 | 3 | 2 | 1 | 0 | ?   |

.

٠

Please identify yourself in the following areas:

a) Are you special ed. or regular teacher? (circle one)

b) To which unit do you belong?---grade 1-2, 3-4, 5-6, not a member of a unit. (circle one).

#### PART II

#### 12/5/73

The following open ended questions are provided to get your general feelings regarding the Webber program and also to find what you feel the greatest needs are for continued development and improvement. You may wish to identify yourself as special or non-special education and your unit, but do not feel obligated to do so.

Ē

1. In general, how do you feel about the Webber program?

2. What do you like best about the Webber program?

.3. What do you dislike most about the program?

4. Which area is in greatest need for revision or improvement? This may be the same as your response for #3 above, but not necessarily so. What suggestions do you have to improve that situation?

5. What do you see presently as the most pressing problem at Webber? This may not be as a result of reorganization.

If you need additional space for your comments, please attach sheets to this form.

ne negative number in parenthesis indicates the number of teachers who did not respond to the questions directly below.

,

19985

Generally teachers felt good about the Webber program in December and felt even better about it at the end of the year. Some specific areas where teachers observed improvement from December to May include:

- (Question 4) better use of planning time
- (Question 7) programs better adopted to learning styles of children

•

- (Question 14) time for planning
- (Question 15) more involved in decision making
- (Question 17) goals better established
- (Question 22) better designed curriculum
- (Question 24) provision of work-conference areas
- (Question 28) supporting principal
- (Question 31) adequate A.V. equipment
- (Question 34) objectives set for special ed. students
- (Question 35) knowing each child better

Areas indicated as needing improvement or not meeting expectations:

| (Question | 8)  | improved | inservice |          |
|-----------|-----|----------|-----------|----------|
| (Question | 30) | adequate | custodial | services |

The section following includes the responses from the five open ended questions in Part II of the questionnaire. Responses from December and May are placed side by side so that a comparision can be made. The statements are not compared for individuals, however, in that the identity of individuals was not known.

# WEBBER TEACHER QUESTIONNAIRE PART II

| 1. In general, how do you feel about the Web  | ber program?   |
|---|--|
| DECEMBER 1973   | <u>MAY 1974</u>  |
| <ul> <li>I teel this program has great potential. The changes in the children due to smaller class size and special education integration is remarkable. As a unit, we are planning and s'aring ideas, responsibilities, successes, failures, etc. I find that extremely exciting.</li> </ul>   | I feel even more strongly that this is a superior<br>program. The children have made much progress<br>in the academic areas and their inter-personal<br>relationships.   |
| I feel it's ideals and goals are fantastic!<br>Inere are still some wrinkles to be ironed<br>of the children have improved socially<br>academically!! V ry optomistic. A tremendous improvement<br>over the programs in years past.   | Things are definitely on the up-swing, which<br>really pleases me.<br>That it has been successful for a first-year<br>operation and the it should definitely be<br>continued.<br>I feel the program has achieved many of its goals   |
| Great - this is the best year of teaching<br>I've <u>ever</u> had. It's very bit as good as I<br>imagined it would be.  | for the 73-74 year. I do feel that we're at a point where we need more evaluation in order to determine what things are necessary for an even more productive 74-75 school year.   |
| I feel very satisfied with most aspects of<br>the program. There is a calm feeling in<br>the classroom which is quite relaxing for<br>learning situations. It is proving bene-<br>ficial for the children and makes a teacher<br>look forward to teaching.<br>Frustrated! Many things are being attempted<br>but one wonders how effective these measures<br>are. There is little communication about | Tremendously pleased. I am very impressed with<br>all the work the entire staff has done to help<br>make our new program as successful as it is.<br>Great. My children have received a great deal of<br>assistance in the basic areas of reading and<br>math combined with many interesting units, pro-<br>jects and trips which could not be accomplished<br>without teacher interaction and cooperation.     |
| t <sup>1</sup> ,e goals we set up and how to achieve these goals.   | Very good.   |
| <ul> <li>I feel that it has good potential but may<br/>not realize this potential without contin-<br/>uous critical evaluation as related to previ-<br/>ously stated goals. There needs to be<br/>greater understanding and clarification of<br/>these goals.</li> <li>Very pleased - I think we have a really<br/>great beginning.</li> </ul>  | Good. It's been a great year, on the whole.<br>Very good. I see progress made in all the basic<br>skills. I feel this is due to the 15-1 ratio<br>and a concentrated effort in providing materials<br>for the basic skills. I'm also pleased with the<br>students' change in attitude toward school and<br>each other. I feel it's been quite successful.<br>I feel this has teen the best year Webber has had |
| I feel the program has been a tremendous<br>success, but these feelings are not based<br>on any evaluation. But, I feel the evalu-<br>ation will show the success of the program.   | since I've been here (6 years). I see the<br>Webber Program making more improvements with each<br>succeeding year.<br>Very good.   |
| -81-  | 1 1 1 N 7  |

| 1. In general, how do you feel about the Web   | per program? (Continued)   |
|--|--|
| DECEMBER 1973  | MAY 1974   |
| I feel it is great. The total atmosphere of<br>the school is pleasant, warm and what I think<br>a school should be. Everyone involved in the<br>total process of education. Our entire<br>reason for being here is to provide the best |  |
| for the children's needs and I think we are<br>walking in that direction.  | evaluating procedures and as the scores come in,<br>it is quite obvious that the special education<br>students have improved greatly.  |
| L reel that the program has been a life saver<br>not only to the teachers but to the students<br>also. My students are much happier this year<br>about themselves and about the school.  | The program is, generally, a sound one in theory.<br>Problems have arisen in implementation which<br>negated some of the theoretical assumptions. In<br>general, I have a positive feeling about the<br>program. |
| usiastic. I feel our program has been<br>tremely beneficial to individual needs.<br>There seems to be a more human and accepting<br>environment.   |  |
| I am very enthusiastic about the program<br>and feel that as of now, everything is runn-<br>ing fairly smoothly. I think that the<br>attitudes of teachers, as well as the<br>students, have greatly improved over last<br>vear.       |  |
| Very good. It is much better than last<br>year. I feel I know the kids in a positive<br>way.   |  |
| In general, I am very positive and hope<br>to see it continued and expanded and<br>bettered.   |  |

2. What do you like best about the Webber program?

E

| DECEMBER 1973   | <u>May 1974</u>  |
|---|--|
| The small class size - of course! Plus the<br>willing way in which my unit works together.<br>The class size allows for more time with<br>each child, more frequent and thorough evalu-<br>ation, a more personal and understanding<br>relationship with my students.<br>The smaller classes and the willingness for<br>teachers to talk. Even though we disagree<br>and get mad, we seem to be able to talk. | Lowered class sizes which should facilitate in<br>dividualized instruction and improve teacher-<br>pupil <u>understanding</u> of one another.<br>I like best the cooperation of teachers to<br>teachers in the 5th and 6th grades. We have a<br>problem Communicating across units but the reason<br>is because of time. The communication is great<br>in units. |

# 2. What do you like best about the Webber program? (Continued)

| DECEMBER 1973   | <u>May 1974</u>   |
|---|---|
| The small class size. I feel as if I really know all of my children this year.  | The fact that I know every single child in our<br>unit, and that the special education kids are<br>getting along great with the "normal" kids.  |
| Working in a unit with other 3rd and 4th<br>grade teachers. Sharing has helped all of<br>us so much. The intensity of pupil-teacher<br>relationships that have developed as a result                | Attitude is one of positiveness, able to meet needs of children.  |
| of smaller classes. The feeling that <u>at last</u> is ossible to meet individual needs.  |   |
| 1 1.ke the opportunity to individualize with<br>students as a result of having under 15<br>c'ildren.  | the end of the year and realize they have really<br>learned a lot more this year than in the past.  |
| are ongoing communication among the members<br>anit; the sharing of ideas, sug-<br>as, materials, methods, problems, etc.   | The 15-1 ratio; the cooperation between teachers<br>in planning unit activities; children's needs<br>and schoolwide planning for ongoing curriculum;<br>and the relaxed atmosphere and positive attitude            |
| The professional and personal relationships<br>among the members of my unit. Districtwide,<br>administrative support for this program.  | of students and teachers alike.<br>Class size, working with other teachers as a unit,<br>the dedication of all our teachers their<br>willingness to work and their concern for the                                  |
| The fact that I have been able to establish a better relationship with the children in  | need of the children.   |
| my class. And after more than fifteen<br>years as teacher, for the first time I feel<br>I'm being very effective.   | Feeling close with the children and teachers in one unit.   |
| being able to work with individual children<br>daily for 15-20 minutes. This would not be<br>possible without a 15-1 ratio. I'm able to<br>have 3 reading groups that have only 1 child<br>in each. | I feel being able to devote 15 minutes a day to<br>individuals who need help in reading and math is<br>the best feature of the Webber Program. I have<br>also enjoyed the close relationships with the<br>children. |
| The 15-1 ratio.   | The teacher-pupil ratio.  |
| The smaller class size which enables a closer relationship to the children. The give and take of an excellent faculty. Being involved in decision-making pro-                                       | 15-1 ratio and the opportunity we've had to tune<br>in to some of the emotional problems our kids are<br>having. I feel that I have been able to instill<br>a sense of worth in many of my children.                |
| cesses. The support of the teacher: in a unit with common goals. A REAL TEAM APPROACH.  | Small classes-close pupil-teacher relationships;<br>also closeness of faculty.  |
| I enjoy only having 15 in a room. Because<br>of our reading problems, etc. plus dis-<br>cipline problems, it would almost be im-  | Small classes, use of the special education teachers and the way we have learned to work together.  |
| possible to teach and teach at the level I would be proud of.   | 15-1 ratio, unit planning becoming real team effort and continuous program in reading and math.   |

## 2. What do you like best about the Webber program? (Continued)

| DECEMBER 19 | 97 | 73 | 3 |
|-------------|----|----|---|
|-------------|----|----|---|

A closer relationship with students. Time to listen with only 15 students. More sharing of teachers ideas than in the past.

I enjoy the teacher-student ratios this year. Undoubtedly, this has to be one of the best aspects of the program because the teachers can become more aware of the individual emotions and problems of each child. I really feel that this is what the educational process is about and for me, has proved very successful and rewarding.

1 can do so many humanizing things in the classroom, i.e. work on values, take time for individual attention, work on intererisonal relations and see some light in the kid's eyes.

I like being able to have time to notice individual problems and weaknesses and having time to work with both these aspectsindividually and group. <u>MAY 1974</u>

Chance to make decisions about things that are important to the workings of the program.

• \*

## 3. What do you dislike most about the program?

| DECEMBER 1973   | . <u>MAY 1974</u>   |
|---|---|
| I find the ss-unit sharing of ideas and communication non-existent. As a unit we  | Its inflexibility.  |
| are very willing to express our ideas and<br>feel free to disagree without hurting one's  | The lack of adequate work and storage areas.  |
| feelings. I see a great lack of profession-   | So many meetings after school - I know they are   |
| ism in this faculty when a person is afraid<br>to ask a question for fear of the other<br>person thinking or reacting defensively.              | necessary - maybe next year we can be more<br>efficient in getting the meetings done earlier. |
| I do not think we have enough time for  | Special education teachers still don't have any time to spend with the regular classroom      |
| special education. The children in special<br>education need more help in a structured  | teacher to talk about children and materials.   |
| program. Where does my first priority lie?<br>My classroom or my special education groups!  | Not enough time in a day - due to intricate<br>scheduling.                                    |
| The tremendous amount of meetings.  | No real complaints, but I'm hoping we can elim-<br>inate some of the many meetings in 74-75.  |
| The lack of communication <u>between</u> units. We<br>had hoped that a teacher workroom for all of<br>us to use from 2:00-3:00 and during lunch |   |
| -84   |   |
| of the second                                 |   |

## 3. What do you dislike most about the program?

|    | DECEMBER 1973   | <u>May 1974</u>   |
|----|---|---|
|    | would help, but many teachers don't seem willing to leave the lounge.   | accomplished. I really need to spend more time<br>in my room. However, on my part, I could<br>sacrifice some of my time in the lounge.  |
| ۰. | I dislike the idea that if a few students<br>fail to "make it", or if not every aspect<br>is successful, then the program will be dis-<br>continued.  | Too many meetings. I feel that we have tried<br>to tackle too many areas of the new program<br>in too short of time.  |
| •  | The lack of communication amoung the members of the faculty.  | Not enough time in the day.   |
|    | A feeling of pressure to meet the needs of<br>the children and the needs of the program.<br>nsion created by some teachers who feel a   | Our failure to receive enough money to support<br>the extensive field trip program we had en-<br>visioned. Lack of adequate supplementary<br>materials in all areas. Lack of adequate<br>custodial and maintenance service. |
|    | d for more communication but express it<br>such a way that no one feels like com-<br>inication but express it in such a way that<br>ap one feels like communicating with them!  | I believe we need stronger support and guidance<br>from our administrator. He's away much of the<br>time, and consequently, when serious problems<br>come up there's none to deal with them                                 |
|    | The pressure from other units and individuals<br>to organize every units special education<br>program exactly alike.  | Knowing I need more time in my classroom after school and not being able to be there because  |
|    | Title VII.  | of planning meetings which are also necessary.  |
|    | There just doesn't seem to be enough time<br>to do everything I want to get done.   | Nothing.  |
|    | There is not sufficient time to plan and consult with our unit and the whole faculty plus spend the time needed after school in cur rooms.  | I still feel we need more feedback from Title 7.<br>The time during the day is short and we have<br>not gotten into our classrooms after students<br>leave. We hope that we will need less time<br>for meetings.            |
| •  | Although much sharing of ideas and philos-<br>ophies has gone on in our unit - more time<br>is definitely needed. At times I object to<br>switching classes to facilitate special<br>education classes. There is so much to do<br>with my own group.                                      |   |
| •  | I have to question moving the children about<br>so much in the primary unit. Of course, it<br>is necessary for the special education to<br>be completed at this time but I'm hoping<br>that such movement from class to class for<br>the unit is not more of a hinderance than a<br>help. |   |
|    |   |   |

#### 3. What do you dislike most about the program?

#### DECEMBER 1973

Not enough time in school day - still much to work out in area of curriculum - lack of A-V equipment.

I dislike having to spend so much time on trivia, i.e. small administrative problems that should be solved by groups, etc.

4. <u>Unich area is in greatest meed for revision or improvement?</u> This may be the same as your response for #3 above, but not necessarily so. What suggestions do you have to improve that situation?

#### DECEMBER 1973

Cumunication (The 2-3 period daily). <u>Curriculum</u> a velopment. (This needs plenty of discussion - cross-unit discussion) I'm not sure. I, personally, have tried suggesting things, but none seems to have the desire to work things out. I find this truly frustrating.

1 am at a real loss about this \_\_\_\_\_\_ Teachers have different expectations.

Teachers have different expectations. I would like to see at least one week and

possible two of teacher time for pre-school planning next fall. I don't understand how the Urbana Schools can possibly feel teachers will be ready to begin the school year with <u>one</u> day of planning time before the children come. This would also eliminate the need for so many meetings at the beginning of the school year and give the teachers much needed time in their classrooms.

Move the comfortable furniture from the lounge to the workroom. Review for the new personnel our objective regarding improved communication.

There seems to be a need to inform new teachers about our program in a little more detail. A lot of things seem to be taken for granted as being known when I'm sure they aren't. A list of goals doesn't

#### MAY 1974

Next year we should have fewer decisions to make. We have been working on rules, schedules, etc., many of these will have been worked out this year.

Title VII; I would prefer not having Title VII at all, but if we have to, I feel a language improvement program would be good.

#### Nothing.

The playground supervision! Supervisors should be required to take some kind of workshop. Or at least have a list of pointers regarding the handling of children. I'm sure we have some staff members that could meet with these people at the beginning of the year. If problems occur, they should be handled by the principal and not put back on the teachers.

I believe we need stronger support and guidance from our administrator. He's away much of the time, and consequently, when serious problems come up, there's no one to deal with them immediately.

Our abysmal failure to adequately cope with problems of inter-personal relationships. I believe most of our eng-of-year problems stem from this. Next year I hope we can undertake comprehensive inservice training in this area we really didn't have time this year.

<u>May 1974</u>

#### 4. Which area is in greatest need for revision or improvement? This may be the same as your response for #3 above, but not necessarily so. What suggestions do you have to improve that situation?

#### DECEMBER 1973

seem adequate. Some methods of achieving
these had been determined by old teachers,
\* but new ones weren't informed of these.

Institute a faculty work-conference room. 'Enforce the 2:00-3:00 time for "common planning" and "consulting by all teachers within units and as a total faculty." Eliminate the teacher's lounge.

Curriculum Development: Discussion leading curriculum continuity K-6. Particularly basic skill areas.

o the lack of experience, are expecting too much of many of the primary children, especially in the area of reading.

Suf ent materials available for children who e not learning adequately with the present program. There has been a desperate need for a sequential program in the teaching of sounds and symbols in grades 1, 2 and 3.

Title VII. It could be improved by spending more time with the kids who are really bad r aders. Also I feel the Title VII teacher could follow a more consistent system of planning, feedback and attendance.

T'tle VII - I don't know how or what to do. It is difficult to work it into our program in a meaningful way. It was an instant 'planning last September. Our program is based on each teacher having 15 children, etc. I just don't think it was well planned '. for Webber. Nor our program fully explained

to Mr. Rawls or Miss McKinney. Hence the program has nothing or almost nothing to do with the rest of our program. The teachers at Webber never discussed this before with Mr. Rawls - too late now.

I feel a need for more inservice training programs. However this answer conflicts with my answer to question #3. (I guess we need more hours in a day, more money for equipment and supplies.)

## MAY 1974

Field trips. These children need to be exposed to many more experiences in small groups. I also feel the need for more inservice training in the teaching of our basic texts - Ginn and Heath and also available supplementary material.

I'd like to see more children in Webber who aren't eligible for the special education program. We need more good models for the large number of special education children we presently have.

Title VII and Early Intervention. There still needs to be discussion in both of these areas and decisions must be made regarding the availability of space for Title VII and in order for the E.I. program to function properly next year, some definite decisions must be made regarding placement of the program and what is expected of the program that will best serve the students at Webber.

Cut special education service to 1 hour a day instead of 1<sup>1</sup>/<sub>2</sub> hours. Every teacher work and cooperate to insure every special child receives help he/she needs - to eliminate necessity of freeing special education teachers.

Meetings - start unit and faculty meeting at 2:00 and the Monday and Wednesday committee and curriculum meetings at 2:30 so we could do something in our classroom and then go to meetings.

Where does Title VII fit in? Special education teachers still don't have any time to spend with the regular classroom teacher to talk about children and materials.

Meetings! It seems that so much time is wasted in meetings. In general, meetings should be more business like - and to the point.

More faculty time spent on analyzing problems or rather in analyzing those portions of program which have not been fully implemented and arriving at an understanding as to why and whether or not the difficulties <u>can</u> be rectified!

#### TO: TEACHERS

RE: use of attached list of pupils to obtain sociometric data

1. The attached list should have the names of all the pupils in your room. Please check it over and add missing names or mark off any name that should not be on the list.

C

.,

- 2. Pass out one copy to each pupil. Ask the class to circle the answer which tells how they feel about each person in the room. Tell them to not circle a response behind their own name, but to give an answer for every other name on the list.
- 3. When filling out sheet #1, the pupils are to be asking themselves: HOW MUCH WOULD YOU LIKE TO DO SCHOOL WORK WITH EACH OF THE PUPILS IN THIS ROOM?

Demonstrate procedure on chalkboard with fictitious names as they are on your pupil list.

- 4. On another occasion, pass out a second copy of the pupil list. When filling out sheet #2, the pupils are to be asking themselves: HOW MUCH WOULD YOU LIKE TO PLAY A GAME ON THE PLAYGROUND WITH EACH OF THE PUPILS IN THIS ROOM?
- 5. The same general procedures apply to both Sheet #1 and #2.
- 6. If you wish, you may substitute a subject matter name such as math or reading or science inr school work or a particular game in section #2. The game should be one requiring physical agility rather than something like chess or scrabble.
- 7. Gather copies relating to work (#1), label as Response to #1. Send to D. Holste at Central Office.
- Gather copies relating to play (#2), label as Response #2. Send to D. Holste at Central Office.

Responses will be made by children on a four point scale:

| 🛦 lot       | 3 |
|-------------|---|
| Some        | 2 |
| Very Little | 1 |
| Not at All  | 0 |

#### SOCIOMETRIC DATA

The page preceding describes a sociometric technique used by the Webber teachers in October, 1973 to determine pupil ratings of one another on the basis of "play" and "work" relationships. The purpose of this technique was to determine whether children eligible for special education services were seen by other children as being inferior or otherwise inadequate. Since many of the children receiving special education services are those who have more serious academic deficiencies, it was expected that they would be rated lower in "school work" associations. However, in "school play" relationships this lower choice should not be significant if special education creates no stigme associated with the provision of its services.

This measure was only taken at one point, October, 1973 in the early weeks of the new program. In order to provide data to better determine the affects of the program in this area, it is recommended that it be requested at the same time the next school year (October, 1974).

A "work" and "play" score was established for each child by determining the mean of the responses made by all other children in his or her classroom. The response for each name was limited to a four point scale with assigned values of 3-2-1-0, the highest score 3 being the most positive score. Both "work" and "play" mean scores for the 223 children was 1.83. In addition to the report by classrooms in Table 12 teachers were given a report on the individual scores for each of their children and several analysis were done comparing the choices made by different sex, different race, special and non special and all combinations of those groups involving 12 separate analysis. These further analysis were done because of the recognized fact that sex and race factors frequently affect choices and this affect may effset or exaggerate the affects of special and non special choices.

#### MEAN SCORES OF CHILDREN IN SPECIAL AND NON-SPECIAL EDUCATION ON A SOCIOGRAM ADMINISTERED IN OCTOBER, 1973

The scores for special and non special in either "work" or "play" did not appear to be significantly different although the non-special scores over-all were lower. The difference between ratings of same and opposite sex was greater than the difference between special and non-special for those rating groups where groups were large enough to make comparisons. The difference for ratings of special by non-special with the variable of sex removed was less marked for play than for work.

The fact that this data was gathered only one time with no reference as to what constituted a high or low score made it difficult to draw any definite conclusions. It can be said that the data did not give support to the fear that special education children were seen by their peers as being unacceptable in "work" and "play" situations. Whether this was in anyway attributable to the fact that the special children were fully integrated in the classrooms as part of the new program is impossible to say at this time.
