ABSTRACT

National normative data on characteristics of students entering college as first-time, full-time freshmen are presented, based on results of the fall 1985 Cooperative Research Program survey. The data are weighted to represent the population of freshmen. Extensive statistical data are reported separately for women and men, and for 37 institutional groupings, based on the school's enrollment size, degree of selectivity, control, level, religious affiliation, and racial composition. The survey results revealed that students continue to support liberal positions on a number of key political and social issues. There is a continuing decline of freshman interest in traditional liberal arts majors, particularly the sciences. Significant increases occurred in the proportion of entering students participating in campus-funded aid and scholarship programs, but little change in the proportion of freshmen participating in federal grant and loan programs. Included are: a brief narrative summary of the results, information on the research methodology, the 1985 Student Information Form, a specification of region categories and the coding scheme, a list of participating institutions, and a sample survey report provided to a participating institution. COOPERATIVE INSTITUTIONAL RESEARCH PROGRAM

The Cooperative Institutional Research Program (CIRP) is a national longitudinal study of the American higher education system. Established in 1966 at the American Council on Education, the CIRP is now the nation's largest and longest empirical study of higher education, involving data on some 1,300 institutions, over 6 million students, and more than 100,000 faculty. To maximize the use of these data in research and training, the CIRP was transferred to the Graduate School of Education at UCLA in 1973. The annual CIRP freshman and follow-up surveys are now administered by the Higher Education Research Institute at the University of California, Los Angeles, under the continuing sponsorship of the American Council on Education.

AMERICAN COUNCIL ON EDUCATION

The American Council on Education (ACE), founded in 1918, is a council of educational organizations and institutions. ACE seeks to advance education and educational methods through comprehensive voluntary and cooperative action on the part of American educational associations, organizations, and institutions.

HIGHER EDUCATION RESEARCH INSTITUTE University of California, Los Angeles

The Higher Education Research Institute (HERI) is based in the Graduate School of Education, at the University of California, Los Angeles. The Institute serves as an interdisciplinary center for research, evaluation, information, policy studies, and research training in postsecondary education. HERI's research program covers five broad areas: the outcomes of postsecondary education; academic administration and institutional management; faculty performance; federal and state policy assessment; and educational equity.

The American Freshman: National Norms for Fall 1985¹

An Overview of the 1985 Freshman Norms Report

This is the twentieth annual report of national normative data on the characteristics of students attending American colleges and universities as first-time, full-time freshmen. This series, initiated in 1966, is a project of the Cooperative Institutional Research Program (CIRP), a continuing longitudinal study of the American higher education system sponsored by the American Council on Education (ACE) and the Graduate School of Education at the University of California, Los Angeles.

The principal purpose of the CIRP is to assess the effects of college on students (see Astin, *et. al.*, 1966). During the past twenty years the CIRP has generated an array of normative, substantive, and methodological research that has yielded information pertinent to a wide range of issues in American higher education.

The freshman survey data reported here have been weighted to provide a normative picture of the American college freshman population for persons engaged in policy analysis, manpower planning, administration, educational research, guidance and counseling, as well as for the general community of students and parents. The survey instrument, the Student Information Form (see Appendix B), is revised annually to reflect the changing concerns of the academic community and of others who use the information. The freshman survey data also provide initial input information for longitudinal research. Follow-up surveys of individual students in each entering class are conducted at various intervals after the initial survey.² In recent years, longitudinal follow-ups of CIRP students have been used in major studies of dropouts (Astin, 1975), campus protests (Astin, Astin, Bayer, & Bisconti, 1975), education and work (Bisconti and Solmon, 1976), campus change (Astin, 1976), student development (Astin, 1977), and minorities (Astin, 1982). (For the most recent follow-up report, see Green, *et. al.*, 1983.)

The normative data are reported separately for women and men, and for 37 different groupings of institutions. The major stratifying factors are institutional race (predominantly black versus predominantly white), type (two-year college, four-year college, university), control (public, private-nonsectarian, Roman Catholic, and Protestant), and the "selectivity level" of the institution. (A complete discussion of the CIRP freshman survey methodology and stratification scheme is presented in Appendix A.)

Summary of Major Trends in the 1985 Freshman Survey Data

The Fall 1985 national survey of entering freshmen indicates students continue to support liberal positions on a number of key political and social issues, despite the public perception of a "conservative" mood on college campuses. In the area of college majors and careers, 1985 freshman survey data reflect the continuing decline of freshman interest in traditional liberal arts majors, particularly the sciences. This year's entering students were also less interested in technologically-oriented careers such as engineering and computer programming than previous cohorts of entering students. The 1985 survey data also show significant increases in the proportion of entering students participating in campus-funded aid and scholarship programs, but little change in the proportion of freshman participating in federal grant and loan programs since Fall 1984.

Student attitudes on political issues showed a slight movement away from the political center in 1985, continuing a trend begun in Fall 1982 (Figure 1). This year 57.6 percent of the entering students identified themselves as being politically "middle-of-the road," down from 57.4 percent in 1984 and the high

¹This research is supported in part by Contract No. 300-84-0163 from the United States Department of Education.

²Normative results from follow-up studies have been published at various times over the past twenty years, as have descriptive profiles for student subgroups abstracted from the freshman survey data. See, for example, *Four Critical Years* (Astin, 1977), and *The American College Student 1982* (Green, *et. al.*, 1983).

of 60.3 percent in Fall 1983. This decline in the "middle-of-the-road" category was reflected in slight gains in both the liberal and the conservative positions. In Fall 1985, 22.4 percent of the entering students identified themselves as "liberal" or "far left" politically, up from 22.1 percent in 1984 and the low of 19.7 percent in Fall 1981. On the conservative side, an all-time high of 20.9 percent of the entering freshmen identified themselves as being either "conservative" or "far right" politically, up slightly from the 1984 figure of 20.5 percent.

In contrast to their generally moderate political self-identification, this year's entering students support a variety of traditionally liberal political and social issues. In the area of military spending, only 28.6 percent support increased defense spending, down from 32.5 percent in 1984 and 38.8 percent in Fall 1982. Fully two-thirds (66.0 percent) feel the federal government should be doing more to promote disarmament (Figure 2). On other issues, a growing proportion believe that the wealthy should pay more taxes (73.3 percent, up from 69.7 percent in 1984 and reversing a decline begun in 1976). The proportion of entering students who agree that the federal government is not doing enough to control pollution rose slightly in 1985, to 78.0 percent (from 77.7 percent in Fall 1984). Support for legal abortion was also up this year, from 53.8 percent in 1984 to 54.9 percent in 1985. Finally, the proportion of entering students who agree that school busing is an acceptable method to promote racial integration reached a new high at 54.4 percent, up from the previous high of 53.6 percent in 1984 and 37.0 percent in 1971.

This year's survey reveals several shifts in student interest in majors and careers. Interest in science declined this year, while education and the humanities registered slight gains. (See Figure 3.) Only 3.4 percent of this year's freshmen plan majors in the biological sciences (down from 4.2 percent in 1984 and 4.7 percent in 1977), while 2.4 percent anticipate majoring in the physical sciences or mathematics (compared to 2.6 percent in 1984 and 3.1 percent in 1977). In contrast, interest in education majors and careers increased in 1985: 7.1 percent of the 1985 freshmen plan to major in education (up from 6.5 percent in 1984 and a low of 6.0 percent in 1982 and 1983) and 6.2 percent plan teaching careers (up from 5.5 percent in Fall 1984 and the low of 4.7 percent in 1982). Freshman interest in arts and humanities majors rose slightly to 8.5 percent in 1985, up from 8.3 percent in 1984 but down from 8.9 percent in 1980. Freshman interest in the social sciences was stable in Fall 1985, at 6.6 percent, compared to 6.7 percent in Fall 1984 and 6.7 again in Fall 1980. Business remains the most popular freshman major: in Fall 1985, 24.8 percent plan to major in business (excluding secretarial studies, which account for another 2.0 percent), up from 24.0 in Fall 1984, and 21.3 percent in 1980.

Two key "technology" careers, computer programmer and engineer, experienced substantial declines in freshman interest in the Fall 1985 survey. (See Figure 4.) Only 10.0 percent of the freshmen entering college in 1985 plan to pursue an engineering career, down from 10.4 percent in Fall 1984 and the peak of 12.0 percent in 1982. Student interest in traditional computing careers (such as a programmer or systems analyst) has fallen by 50 percent during this same three year period. In Fall 1982, 8.8 percent of the entering freshmen planned to pursue a career as a computer analyst or programmer; this fell to 8.5 percent in 1983, to 6.1 percent in 1984, and to 4.4 percent in 1985. This declining interest in technological careers stands in stark contrast to the growing national concern for increased technological training and technological capacity in the American workforce.

The movement in student values towards material concerns and financial security declined slightly this year, marking the end of a fifteen year trend reflecting annual increases in freshman concern for "being very well off financially." (See Figure 5.) In Fall 1985, 70.9 percent of the entering freshmen indicated that it was essential or very important to be "very well-off financially", down slightly from 71.2 percent in Fall 1984, but still far higher than the 43.5 percent level recorded in 1967. In contrast, student interest in "developing a meaningful philosophy of life" declined again this year, dropping to 43.3 percent, down from 44.6 percent in 1984 and well below the peak of 82.9 percent recorded in Fall 1967.

High school grades rose slightly this year, marking an end to five consecutive years of little or no change in the proportion of entering freshmen reporting A/A- high school grade averages (Figure 6). Just over one-in-five freshmen (20.7 percent) reported high school grades in the A/A- range this year, up from 20.0 percent in Fall 1984. The 1985 figure for A/A- students is still below the peak of 23.3 percent recorded in 1978, but is also well above the low of 12.5 percent registered in Fall 1969. Similarly, the proportion of entering freshmen with C averages declined in 1985, down to 20.4 percent from 21.3 percent in 1984. These figures are well above the all-time low of 17.3 recorded in 1978, but also below the all-time C average high of 31.6 percent observed in Fall 1969. Although grades are up, more students seem to feel that they are working harder for their marks: only 50.1 percent of this year's entering students feel that high school grading practices are too easy, in contrast to 54.1 percent in 1984 and the peak of 63.7 percent in Fall 1978.

The 1985 survey data reflect little change in freshman participation in government funded student aid programs during the past year, but increasing student participation in campus-funded aid programs. Freshman participation in campus aid/scholarship programs reached an all-time high in Fall 1985 at 19.5 percent, up from 16.7 percent in Fall 1984 and 12.8 percent in 1980. With regard to federal aid programs, 19.9 percent of this year's entering students reported participation in the Pell Grant program, virtually unchanged from 19.8 percent level recorded in Fall 1984 (but down substantially from the peak of 32.7 percent recorded in Fall 1977. Similarly, 23.0 percent reported receiving a Guaranteed Student Loan, a very slight decline compared to the 23.4 percent figure of Fall 1984 (but again down somewhat from the peak of 26.3 percent figure of Fall 1981.) Freshman participation in state aid programs was at 14.1 percent in 1985, up slightly from 13.7 percent in 1984. Participation in work-study programs also increased slightly in 1985, to 10.0 percent, up from 9.4 percent in 1984 (although down from the peak of 14.5 percent recorded in 1980).

The 1985 freshman norms are based on questionnaires completed by 279,985 entering freshmen at a national sample of 546 American colleges and universities. Of these, 192,453 questionnaires from 365 institutions were used to compute the 1985 national norms. The normative data presented here have been statistically adjusted to represent the nation's total population of approximately 1.66 million full-time entering freshmen. Since 1966, more than 5 million students and 1200 institutions have participated in the annual CIRP freshman survey. (Appendix A provides additional information about the survey methodology and the population weights.)

- (**) This item is reported for the first time in 1985. Items not indicated with "**" are repeated or modified questions from one or more of the earlier surveys.
- (1) Percentages will sum to more than 100 if any students checked more than one category.
- (2) Because no black two-year colleges participated in 1985, the associated black enrollment is deflated in two-year college norms and inflated in four-year college norms.
- (3) Frequently only, all other items frequently plus occasionally.
- (4) Based on the curriculum recommendations of the National Commission on Excellence in Education.
- (5) Students who applied to no other college are not included in this item.
- (6) Recategorization of this item from a longer list is shown in Appendix C of the AMERICAN FRESHMAN

- (**) This item is reported for the first time in 1985. Items not indicated with "**" are repeated or modified questions from one or more of the earlier surveys.
- (1) Percentages will sum to more than 100 if any students checked more than one category.
 - (2) Because no black two-year colleges participated in 1985, the associated black enrollment is deflated in two-year college norms and inflated in four-year college norms.
 - (3) Frequently only, all other items frequently plus occasionally.
 - (4) Based on the curriculum recommendations of the National Commission on Excellence in Education.
 - (5) Students who applied to no other college are not included in this item.
 - (6) Recategorization of this item from a longer list is shown in Appendix C of the AMERICAN FRESHMAN

- (**) This item is reported for the first time in 1985. Items not indicated with "**" are repeated or modified questions from one or more of the earlier surveys.
- (1) Percentages will sum to more than 100 if any students checked more than one category.
 - (2) Because no black two-year colleges participated in 1985, the associated black enrollment is deflated in two-year college norms and inflated in four-year college norms.
 - (3) Frequently only, all other items frequently plus occasionally.
 - (4) Based on the curriculum recommendations of the National Commission on Excellence in Education.
 - (5) Students who applied to no other college are not included in this item.
 - (6) Recategorization of this item from a longer list is shown in Appendix C of the AMERICAN FRESHMAN

- (**) This item is reported for the first time in 1985. Items not indicated with "**" are repeated or modified questions from one or more of the earlier surveys.
- (1) Percentages will sum to more than 100 if any students checked more than one category.
 - (2) Because no black two-year colleges participated in 1985, the associated black enrollment is deflated in two-year college norms and inflated in four-year college norms.
 - (3) Frequently only, all other items frequently plus occasionally.
 - (4) Based on the curriculum recommendations of the National Commission on Excellence in Education.
 - (5) Students who applied to no other college are not included in this item.
 - (6) Recategorization of this item from a longer list is shown in Appendix C of the AMERICAN FRESHMAN

- (**) This item is reported for the first time in 1985. Items not indicated with "**" are repeated or modified questions from one or more of the earlier surveys.
- (1) Percentages will sum to more than 100 if any students checked more than one category.
 - (2) Because no black two-year colleges participated in 1985, the associated black enrollment is deflated in two-year college norms and inflated in four-year college norms.
 - (3) Frequently only, all other items frequently plus occasionally.
 - (4) Based on the curriculum recommendations of the National Commission on Excellence in Education.
 - (5) Students who applied to no other college are not included in this item.
 - (6) Recategorization of this item from a longer list is shown in Appendix C of the AMERICAN FRESHMAN

RESEARCH METHODOLOGY

1985 CIRP FRESHMAN SURVEY

The freshman survey data reported here have been weighted to provide a normative picture of the American college freshman population for persons engaged in policy analysis, manpower planning, administration, educational research, guidance and counseling, as well as for the general community of students and parents. The survey instrument, the Student Information Form (SIF), is revised annually to reflect the changing concerns of the academic community and of others who use the information. SIF data also provide initial input information for longitudinal research. Follow-up surveys of individual students in each entering class are conducted at various intervals after the initial survey. In recent years, longitudinal follow-ups of CIRP students have been used in major studies of dropouts (Astin, 1975), campus protests (Astin, Astin, Bayer, & Bisconti, 1975), education and work (Bisconti and Solmon, 1976), campus change (Astin, 1976), student development (Astin, 1977), and minorities (Astin, 1982). (For the most recent follow-up report, see Green et. al., 1986.)

From 1966 to 1970, approximately 15 percent of the nation's institutions of higher education were selected by sampling procedures and invited to participate in the program. As the academic community became aware of the value of program participation, additional institutions asked to participate. Beginning in 1971, all institutions that have entering freshman classes and that respond to the U. S. Department of Education's (DOE) Higher Education General Information Survey were invited to participate. A minimum charge, plus a unit rate based on the number of forms processed, helps to defray the direct costs of the survey. In Fall 1974 and 1975, samples of proprietary institutions also participated in the survey.

The normative data are reported separately for women and men, and for 37 different groupings of institutions. The major stratifying factors are institutional race (predominantly black versus predominantly white), type (two-year college, four-year college, university), control (public, private-nonsectarian, Roman Catholic, and Protestant), and the "selectivity level" of the institution. Selectivity, which is an estimate of the average academic ability of the entering class, was made an integral part of the CIRP stratification design (Figure A-1) in 1968 because of its substantial correlation with most measures of institutional "quality" (Astin, 1962). Since 1975, a revised and updated selectivity measure has been used (Astin & Henson, 1977). Stratification cell assignment is based chiefly on data supplied by institutions to various educational directories and college guides. Changes in stratification cell assignments do occur; requests for review are honored each year. Appendix D lists the current stratification cell assignment of all institutions that have participated in the CIRP freshman survey since 1966.

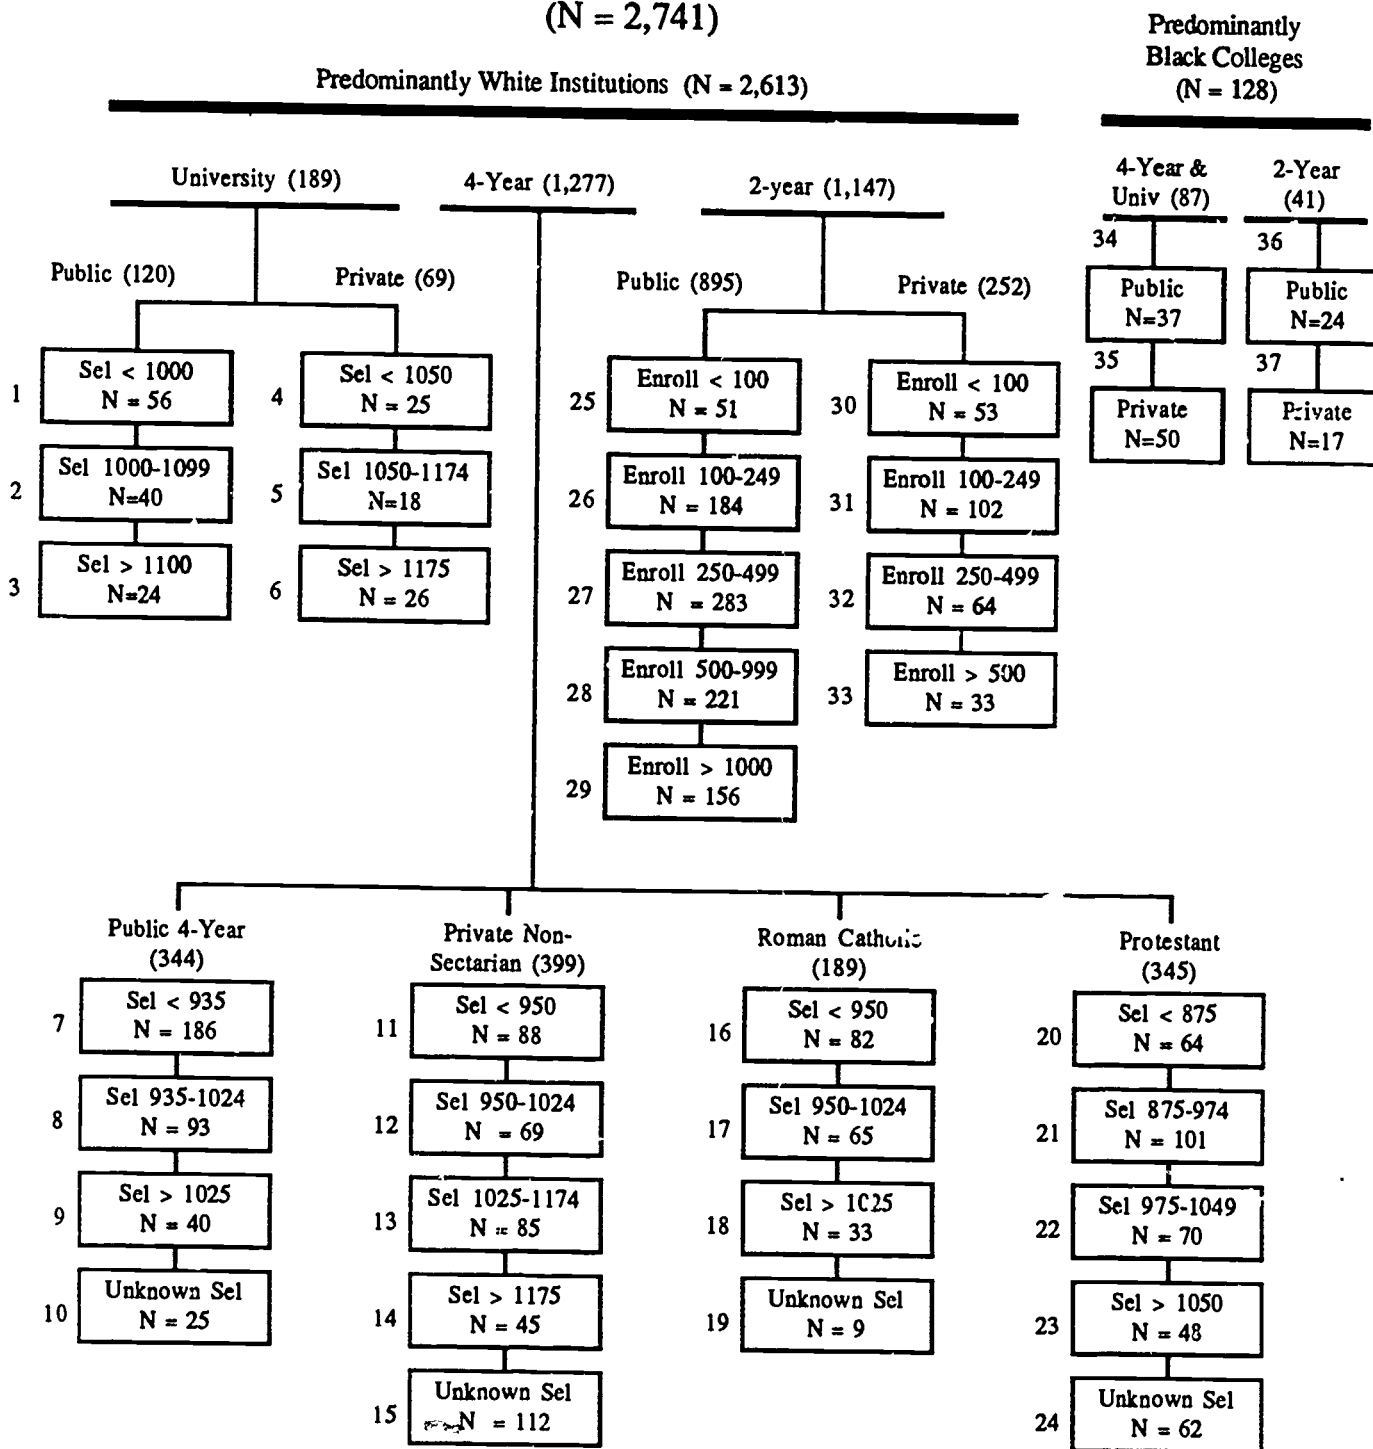

The 1985 Data

Although 279,985 entering freshmen at 546 colleges and universities returned their forms in time for data to be included in the 1985 norms, the normative data presented here are based on responses from 192,453 freshmen entering 365 institutions.

The national norms are based only on data from institutions where the coverage of entering freshmen was judged to be representative. This judgment is based on the percentage of first-time freshmen who completed the 1985 SIF and on the procedures used to administer the forms. Four-year

(N = 2,741)

Selectivity (SEL), used to define strata for four-year colleges and universities, is an estimate of the mean score of entering freshmen on the Verbal plus Mathematical portions of the Scholastic Aptitude Test (or the converted SAT verbal and math equivalents for the American College Test composite). The method of estimation is described in detail in Astin and Henson (1977) and also in Appendix A of the current report. **Enrollment (ENROLL)**, used to define strata for two-year colleges, is based on the total number of first-time, full-time entrants.

colleges are included in the national norms if over 85 percent of their first-time, full-time freshmen completed the SIF; universities must have over 75 percent participation, while two-year colleges must have 50 percent.¹

The normative data presented here were collected by administering the 1985 SIF during registration, freshman orientation, or the first few weeks of classes. The SIF is designed to elicit a wide range of biographic and demographic data, as well as data on the student's high school background, career plans, educational aspirations, financial arrangements, high school activities, and current attitudes. Those data meeting minimal quality requirements for inclusion in the 1985 norms were differentially weighted to represent the population of entering freshmen at all higher educational institutions in the United States.²

Part-time students and those who are not first-time college students (i.e., transfers and former enrollees) were excluded from the normative sample. Since the 1972 survey, special care has been taken to define these enrollment statuses; in surveys before 1972, the participating institutions were asked to exclude part-time students, while non-first-time students were excluded during the data processing stage by screening out those who indicated that they had previously attended college. Since that time, all students who did not identify themselves as part-time were included in the national norms if they either graduated from high school in the year of the survey or had never attended any institution for credit.

Institutional Stratification Design

The stratification design for the 1985 survey is identical to that used in 1984 (see Figure A-1). The rationale for this particular design is provided in the 1971 and 1979 normative reports.

The population included all eligible institutions of higher education listed in the annual Department of Education *Education Directory* (1983). An institution was considered eligible if it was operating at the time of the survey and if it had a freshman class of at least 25 students. Thus, institutions requiring undergraduate credits for admission to their first class (e.g., some professional schools) and a few very small institutions were excluded. In addition, some institutions or their branches were included even though separate 1984 enrollments were not available from DOE, because they were part of prior universes in these surveys and were known to be functioning with first-time, full-time entering freshmen. With these exceptions, the defined population comprised all accredited and nonaccredited institutions listed by DOE, whether university, four-year college, or two-year college. For the 1985 survey, the population of institutions numbered 2,741.

Typically, institutions make budgetary decisions and plan their orientation and registration programs early in the year. Since these matters affect participation in the freshman survey, institutions must be invited to participate several months before information is available to define the final survey population. A total of 2,741 institutions were invited to participate in the 1985 survey. Of these, 1,224 (44.6 percent) had participated in one or more of the earlier surveys, and 1,517 (55.4 percent) were new invitees. A total of 561 (20.5 percent) of the institutions accepted the invitation to participate. Of the 526 institutions participating in the 1984 freshman survey, 449 (85.4 percent) opted to participate again in 1985.

Because of administrative and logistic problems, 13 institutions that accepted the invitation to participate in the 1985 survey were unable to return their completed freshman survey forms in time for their data to be included in the national norms. Thus, data were obtained from 546 (97.3 percent) of the institutions that had agreed to participate in the 1985 survey. Appendix D lists all institutions that have participated in the CIRP in any of the twenty years since its inception. Appendix D also provides information about current stratification cell assignment, the number of years an institution has

¹ Each participating institution received a complete tabulation of its data, but those with unrepresentative sampling were informed that comparisons between their institutional data and the national norms should be made with caution.

² A distinction should be made between higher education and postsecondary education. The normative data exclude students attending most proprietary, special vocational, or semiprofessional institutions; they include those attending two-year colleges and terminal occupational programs.

participated in the CIRP freshman survey, and its norm status (norms data or not norms data) in all surveys.

Weighting Procedures

The data obtained from students were differentially weighted because of disproportionate sampling of institutions within each stratification cell and because not all students at each college completed the SIF. Table A-1 shows the number of participating institutions in each stratification cell and the cell weights applied to each institution's data in computing the national norms. The cell weights in the last two columns are the ratios between the number of first-time, full-time freshmen in the eligible population within a given cell and the total number of freshmen entering sample institutions in that cell, computed separately for each sex. Since population data for Fall 1985 and Fall 1984 enrollments were not available at the time of the 1985 survey, these weights were derived from the Department of Education's Higher Education General Information (HEGIS) Fall 1983 enrollment data. In effect, this procedure assumes that the sample institutions within a cell account for the same proportion of students in that cell in 1985 as in Fall 1983.

These cell weights were further adjusted within each institution, by sex, according to the proportion of the institution's 1985 first-time, full-time freshmen who completed the SIF. These total counts of 1985 freshmen are obtained directly from each participating institution at the time of the freshman survey. Typically, this second weight was between 1.0 and 2.0; in the case of an institution that administered the form to its entire freshman class, the weight was exactly 1.0. The final weight applied to the data from each student was the product of this within-institution participation weight and the appropriate cell weight shown in Table A-1.³

These weighting procedures generated summary data representative of all first-time, full-time students entering institutions of higher education in the fall of 1985. Note that the SIF was completed by entering freshmen and, thus, the data reflect responses prior to any substantial experience with college life.

The Student Information Form

The SIF is designed to serve two functions: first, to obtain student input data for longitudinal research; and second, to obtain standard descriptive and normative data for general information about the freshman population at American colleges. The form thus contains standard biographic and demographic items that have been administered annually to each entering class, as well as research-oriented items that have been modified from previous years (e.g., see the list of attitudinal questions listed under item #37). The inclusion of modified items permits a more thorough coverage of student characteristics but also represents a compromise between two mutually exclusive objectives: (1) comparability of information from year to year which is required for assessing trends; and (2) flexibility in item content to meet changing information and research needs. Table A-2 lists the 1985 SIF items and indicates previous survey years in which comparable items have been used.

The SIF, reproduced in Appendix B, has been developed in collaboration with students, professional associations, participating institutions, government agencies, educational researchers, administrators, policy makers, and members of the CIRP Advisory Committee. It is designed for self-administration under proctored conditions and for processing onto magnetic tape with an optical mark reader. The 1986 SIF is currently being designed with the assistance of the CIRP Advisory Committee, as well as others interested in the annual freshman survey program.

Four tape files are developed from the SIF each year: (1) an institutional summary file containing institutional identification numbers and an institutional summary of the responses for men and women; (2) a file containing individual responses and a student identification number, but no names and addresses; (3) a name-and-address file containing a second, independent student identification number; and (4) a

³The cell weight in Table A-1 is a sex-specific constant for each sample institution in a given cell, whereas the within-institution weight is a sex-specific constant for a given institution but varies from one institution to another, depending on how adequately the institution "covered" its entering class.

The 1985 National Norms

Table A-3 shows the number of institutions and students on which the 1985 national norms are based; it also gives an estimate, derived through weighting procedures, of the total student population. (These counts are the product of the 1985 enrollments reported to us by the institutions and the cell weights shown in Table A-1.)

The creation of norms groups based on selectivity was accomplished as follows:

Selectivity Level	Stratification Cells Assigned to Each Level
low	1, 4, 7, 10, 11, 15, 16, 19, 20, 21, 24
medium	2, 5, 8, 12, 17, 22
high	3, 6, 9, 13, 18, 23
very high	14

New selectivity measures for the population (Astin & Henson, 1977) were used to restratify the CIRP population for the 1975 survey. These estimates are based on data provided in several published college guides and on data reported previously by Astin (1971). Most estimates were originally in the form of mean SAT Verbal (V) plus Mathematical (M) scores of entering freshmen. Mean ACT composite scores were converted into comparable mean SAT V+M scores (see Table 3-1 in Astin, 1971). The current dividing lines between selectivity levels are listed below:

Dividing Line Between	Universities				Four-Year Colleges							
	Private		Public		Public		Nonsectarian		Catholic		Protestant	
	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT	SAT V+M	ACT
low-medium	1050	24	1000	22.5	935	21	950	21.5	950	21.5	875	19.2
medium-high	1175	27	1100	25	1025	23	1025	23	1025	23	1050	24
high-very high	---	---	---	---	---	---	1175	27	---	---	---	---

These new selectivity measures are more recent, more accurate (i.e., most were provided directly by the institutions), and involve less missing data (i.e., fewer with "unknown" selectivity). For details see Astin and Henson (1977).

The items of normative data appear in the same order in the norms report and in the individual reports furnished to each participating institution. The first 51 pages of the national norms present item data separately for men, women, and all students according to the first 17 categories in Table A-3; the next two sets of 17 pages show norms for universities and four-year colleges, respectively, broken out by selectivity levels.

The different types of institutions can be compared on any given item by examining the percentages in the row following the item. For many items the data differ substantially among categories of institutions, as well as within any single category.

It is impracticable to report statistical indicators of precision for every categorical percentage in every norms group. However, some idea of the reliability of the reported data is important for comparisons across related item categories, and over time (i.e. with data from earlier norm reports). Appendix E presents some guidelines for judging the precision of the normative estimates and their comparisons.

The Higher Education Research Institute at UCLA actively encourages the colleges that participate in this survey to conduct local studies of their students. If these studies involve collecting follow-up data, it is necessary for the institution to know the students' ID numbers so that follow-up data can be linked with the data from this survey. If your college asks for a copy of the data and signs an agreement to use it only for research purposes, do have your permission to include your ID number in such a tape?

Yes. No.

^aParticipation in the ACE/UCLA Cooperative Institutional Research Program for a given year is indicated by an "X". Institutions providing data judged to be representative of their first-time, full-time freshman class and included in the norms are indicated by an asterisk. Participation for 1985 is shown for those institutions which had submitted data in time to be included in this publication.

Precision of the Normative Data and their Comparisons

Appendix E

The Precision of the Normative Data and Their Comparisons

So far as *random* errors are concerned, the standard error of a categorical percentage is a function of that group and the number of participants (unweighted) in the norm group. Approximate standard errors are presented for various item response percentages, by size of the norm group, are presented in Table E-1. If one allows for finite sampling and stratification, values would be somewhat lower. Primarily, however, stratification ensures some sampling in all sectors of higher education and provides a basis in the weighting procedures for disproportionate sampling of institutions. In comparisons involving item response, standard error of the difference is approximately equal to the square root of the sum of shared sampling errors.

A potentially important source of error in the stratification sampling is the nonrepresentativeness of the samples within each stratification cell. Although reasonable precautions are taken to minimize known sources of systematic bias, the data are subject to some unknown degree of constant and nonrandom sampling errors. A participating institution must be cautious when it compares its own summary data with the data for the corresponding national norms group, especially when the institution is small or when the campus has not surveyed all its entering freshmen.

While comparisons of data since 1975 with earlier published national norms from the first nine freshmen survey reports (1966-1974) are possible, it is recommended that such comparisons not be done until the publication of a revised set of norms for these earlier years that are based on the stratification scheme employed since 1975. Those who wish to make comparisons between pre- and post-1975 data before the revised norms are available should keep in mind the following considerations:

1. In addition to the revised selectivity measures introduced in 1975, major changes in the stratification and weighting procedures were introduced in 1968 (the addition of cells for black colleges and the use of selectivity levels) and again in 1971 (the addition of cells for public and private universities, public and private black colleges, and the use of size in the stratification scheme for two-year institutions).
2. The *exact* wording of items on the survey instrument and norms reports should be examined carefully since certain items may not be comparable because of minor word changes over the course of the survey.
3. While every effort has been made to maximize the comparability of the institutional sample from year-to-year (repeat participation runs about 90 percent), comparability is reduced somewhat by (a) non-repeat participation, and (b) year-to-year variation in the quality of data collected by continuing institutional participants.

- (*) Total number of valid forms received is indicated by the first number in this row. Please note that comparisons between your Consortium data and National Norms should be made with caution, unless all institutions in the Consortium are in the same Norms Group and have representative samples.
- (1) Percentages will sum to more than 100 if any students checked more than one category.
 - (2) Because no black two-year colleges participated in 1985, the associated black enrollment is deflated in two-year college norms and inflated in four-year college norms.
 - (3) Frequently only, all other items frequently plus occasionally.
 - (4) Based on the curriculum recommendations of the National Commission on Excellence in Education.
 - (5) Students who applied to no other college are not included in this item.
 - (6) Recategorization of this item from a longer list is shown in Appendix C of the AMERICAN FRESHMAN
