## ABSTRACT

This project was designed to secure and screen available education materials appropriate for actualization of Comprehensive Career Education Model-1 (CCEM-1) objectives, and to process, assess, and classify selected potential commercial education materials for incorporation into instructional units and/or supportive educational activities. To achieve the objectives, a 50-member consulting team was assembled from both the educational and business communities, and this team: (1) identified suppliers, (2) secured suppliers participation, (3) identified career educational materials, (4) procured suitable materials, (5) assessed suitable materials, (6) indexed and abstracted the positively assessed material, and (7) delivered the materials and instruments. Of the 580 commercial suppliers contacted, 313 had materials available for procurement and assessment, and 128 of these reported additional materials under development. A total of 2,016 of the 2,344 units received were assessed as applicable to CCEM-1 objectives. Of the assessed materials, 22 percent was applicable to Grades K-6, 27 percent to Grades 7-9, 36 percent to Grades 10-12, and 13 percent to Grades 13-14. These and other findings are discussed, and sample assessment instruments are included. (SB)

Dr. Aaron J. Miller, Director  
Comprehensive Career Education Model I  
The Center for Vocational and Technical  
Education  
The Ohio State University  
2501 North Starr Road  
Columbus, Ohio 43221

Dear Dr. Miller:

With the submission of the attached report, Peat, Marwick, Mitchell & Co. (PMM&Co.) has completed its engagement to identify, procure, classify, assess, index and abstract commercially produced career education materials that meet the requirements of the Comprehensive Career Education Model I (CCEM-I). As required by contract, the following acknowledgment is cited:

The project presented or reported herein was performed pursuant with a grant from the U. S. Office of Education, Department of Health, Education and Welfare. However, the opinions expressed herein do not necessarily reflect the position or policy of the U. S. Office of Education, and no official endorsement by the U. S. Office of Education shall be inferred.

This letter presents a project summary, the findings which resulted from the project, our conclusions and recommendations, and an overview of the attached final report.

PROJECT SUMMARY

The engagement was completed in compliance with PMM&Co.'s response (dated June 19, 1972) to your Request for Proposal (RFP) No. CEP-2A. Work was started on July 5, and the draft of the final report, including appendixes, was submitted on November 10, 1972.

The project was an integral part of the efforts of the U. S. Office of Education, The Center for Vocational and Technical Education (CVTE) at The Ohio State University, and six Local Education Agencies (LEA) selected by the USOE. CVTE was assigned as prime grantee to develop, test and install the school-based Comprehensive Career Education Model (CCEM); the LEA's were to work cooperatively in developing appropriate program components for a validated, nationally transportable career education program available to all public schools.

Specific objectives of the engagement were to:

- . Secure and screen all available commercial education materials appropriate for a comprehensive career education program as it relates to specific instructional units
- . Process, assess and classify selected potential commercial educational materials for incorporation into instructional units and/or supportive educational activities
- . Document activities and submit required reports and information.

A total of 50 people were included in the project team. Under the direction of a project director, work was divided into five major functional activities: field survey, assessment, quality control, systems development, and support and administration. In addition, outside legal counsel was engaged, and the overall project was monitored by a five-man team comprised of senior PMM&Co. partners. 26 members of the project team were professional personnel residing in the Columbus, Ohio area. These individuals were recruited and trained in assessment, indexing and/or abstracting functions. Hence, CCEM-I has available in its geographical area a pool of talent for continuing this effort if desired. In total, more than 10,800 manhours were devoted to the project in the four-month period.

### PROJECT FINDINGS

The following major findings resulted from this project:

- . Of the 580 commercial suppliers contacted, 313 had materials available for procurement and assessment
- . Of the 580 suppliers, 128 that had materials available reportedly have additional career education materials under development; 35 of the 267 that reported no materials available at this time also have materials under development
- . More than 33,600 pieces of material grouped into 3607 units were identified and approximately 2700 units were requested for assessment
- . Of the 2344 units received, 2016 (more than 12,800 pieces of material) were assessed as applicable to CCEM-I objectives

- . Of assessed material, 22 percent was applicable to grades K-6, 27 percent to 7-9, 36 percent to 10-12, and 13 percent to 13-14
- . Of the material assessed, 54 percent was printed and 32 percent was film; the remainder was classified as manipulative and audio-visual
- . 66 percent of the assessed material cost less than \$100
- . Career education units are available commercially for all grade levels - a low of 250 for use in kindergartens to nearly 1750 for grade 12
- . More than 1000 units were judged appropriate for four instructional strategies:
  - discussion - 1709
  - self-instruction - 1357
  - group or panel discussions - 1237
  - individual or group counseling - 1018
- . Of the 2016 positively assessed units, 649 were determined applicable for individualized, small group or large group instruction. Only two units were deemed applicable to community relations and community agency support programs
- . The appropriateness (high, average, low) of units to the CCEM matrix by grade level and element (self awareness, educational awareness, career awareness, economic awareness, decision-making, beginning competency, employability skills and attitudes and appreciations) is as follows:
  - Most self awareness units are for grades 9-12; 50 percent were judged average
  - Educational awareness units are most applicable to grades 7-12; 15-20 percent were judged high
  - At least 195 career awareness units are available for each grade level; more than 50 percent of those for grades 4, 5 and 6 were judged low
  - At least eight economic awareness units are available for each grade from K-12; nearly 50 percent of the units for grades 5 through 9 were judged low
  - Only 136 units for decision-making were judged applicable, most for grades 11 and 12. Of the 21 deemed appropriate for grades 1 through 6, approximately 50 percent were judged high

- Most determinations of applicability for beginning competency were for grades 10-14; none of those for K-9 were judged high
- Of the nearly 570 units determined appropriate for employability skills, 262 were judged applicable for grades 11 and 12; only 86 in total and 50 for grades 11 and 12 were judged high
- At least 100 units were deemed applicable to the attitudes and appreciations element for each grade level; the percent judged high is significantly lower than for other elements where large numbers of units are applicable

The applicability (high, average, low) of units to thirteen target areas (curriculum, career information, career preparation, guidance, staff development, placement/guidance, evaluation, support systems, community relations, post-secondary 13-14, rural education, management, and other), is as follows:

- Of the nearly 6000 judgments of applicability, more than 3566 were in the career information target area; of these, more than 850 were judged high
- 500 or more units were also judged applicable for curriculum (569), career preparation (614), and guidance (1129); only 41 positive judgments were made for the other nine target areas
- The element most frequently indicated was career awareness, followed by attitudes and appreciations

Overall judgments (high, average, low) of the suitability of positively assessed units to CCEM-I needs for materials are as follows:

- 40 percent of the determinations of occupational focus were judged high
- 74 percent were judged low for innovativeness (substantive)
- Nearly 53 percent were rated low for innovativeness (procedural)
- Approximately 68 percent were deemed low for participant involvement.

## CONCLUSIONS AND RECOMMENDATIONS

Project findings indicate that commercial suppliers are making great efforts to provide career education materials. However, as our findings show, the number of units is relatively limited for several elements and target areas for specific grade levels. In addition, judgments (high, average, low) of the applicability and suitability of units to CCEM-I requirements show that quality can be improved. However, considering the relative newness of career education as defined by USOE and detailed by CCEM-I, commercial suppliers should be commended for their efforts to be responsive to the market.

Results of this engagement and its companion project (to identify and assess non-commercial materials; completed in January, 1972) provide CCEM officials with the most complete existing inventory of available career education materials. This inventory should be extremely valuable to users in identifying available products and their sources. This information should also be of great assistance to materials suppliers who are interested in improving their products and filling gaps in units required to meet CCEM-I objectives. To facilitate these potential applications of the existing inventory and to maximize the results of the substantial expenditure for the two projects, USOE and CCEM officials should place top priority on:

- . Disseminating information regarding the availability of career education materials to consumers through the ERIC system
- . Continuing the evaluation process to keep the inventory up-to-date.

Specific recommendations are to:

1. Place the results of the project(s) in the ERIC system.
2. Establish and make available necessary resources for continuing the process of identifying, procuring, assessing, abstracting and indexing career education materials.
3. Place high emphasis on screening materials through careful review of catalogs to determine their probable appropriateness before issuing Material Procurement Requests. This will substantially reduce the resource and time requirements associated with each positively assessed unit.
4. Adopt and implement systems used in this project and make modifications and refinements deemed necessary to keep them efficient and operable at the least required cost.
5. Maintain and expand relationships with suppliers as appropriate. This requires prompt and responsive handling.
6. Do not change the CCEM matrixes or definitions for at least one year. Although refinements might improve the structure, they can be confusing to both consumers and suppliers.
7. Distribute detailed findings of this project to LEA's as soon as possible.

8. Begin a formal plan of action to convey CCEM's concept of career education and provide specific direction in terms of required types of commercially produced materials.

In addition, if appropriate, CCEM officials should make available to other educational agencies the details of the design and implementation of the various systems used in this project. With widespread interest in assessment processes and improved management practices, the possible application of the systems and procedures to other areas should be analyzed.

### REPORT OVERVIEW

This report is organized into six chapters:

Chapter I - Project Scope, Method and Organization

Chapter II - Field Survey and Materials Procurement Methods

Chapter III - Materials Assessment Methods

Chapter IV - Commercial Career Education Material Information System

Chapter V - Summary of Survey Results

Chapter VI - Findings and Recommendations

Appendixes to this report are presented separately:

Appendix A - Key Survey Data Print Outs

Appendix B - Field Survey Procedures Guide

Appendix C - Assessment Center Staff Manual

Appendix D - Commercial Career Education Information System (CCEMIS)

Appendix E - Summary of Selected Project Management Data

With completion of this project, CCEM-I has in its possession narrative descriptions and documentation, with accompanying flowcharts, of all systems used in the five major functional activities; output documents from the information retrieval system; abstracts of the 2016 positively assessed materials for entry into the Educational Research Information System - ERIC; and recommendations for CCEM-I to continue the project using its own staff resources. Files transmitted include hard copy correspondence received during this project, identified materials still in process at the completion of this project, computer generated reports, and copies of all source documents (completed call reports and assessment forms).

\* \* \* \* \*

Peat, Marwick, Mitchell & Co. is pleased to have been associated with this project. We believe that the results and the systems used can be of significant assistance in furthering the application of the career education concept.

We wish to express our appreciation to all CCEM-I personnel who assisted in the project. They are to be commended and encouraged for their efforts to make public school education more meaningful and stimulating.

Very truly yours,

*Peat, Marwick, Mitchell & Co.*

## **I - PROJECT SCOPE, METHODS AND ORGANIZATION**

## CHAPTER I

### PROJECT SCOPE, METHODS AND ORGANIZATION

This project was the second major search and assessment effort conducted under the auspices of CCEM-I. The first project, conducted from November, 1971 through January, 1972, was directed at acquiring and assessing non-commercially produced career education materials from such sources as university departments of education, state departments of education, school districts, specially funded curriculum development projects, associations, etc. At the conclusion of the first project, it was determined that a search and assessment of commercially produced materials was required to provide CCEM-I with a complete inventory of currently available career education materials appropriate to the Center's curriculum development efforts.

Thus, the Search and Assessment of Commercial Career Education Materials (SACCEM) Project was a nationwide survey of commercially prepared career education materials applicable to the actualization of the school-based CCEM. The three following project objectives were set forth by contract:

1. Secure and screen all available commercial educational materials appropriate for a comprehensive career education program as it relates to specific instructional units.
2. Process, assess and classify (index/abstract) selected potential commercial educational materials for incorporation into instructional units and/or supportive educational activities.
3. Document activities and submit required reports and information.

At the outset of the project, "available commercial education materials" were defined as follows:

Available commercial education materials encompass instructional, guidance, administrative, informational support, staff development, evaluation and other materials designed to advance an educational program in the pupil school environment (grades K through 14); that are distributed by any organization which is actively engaged in a promotional, marketing and/or training program to secure acceptance of a developed proprietary product.

This operational definition was established to provide positive direction for achieving the immediate project objectives defined by the CCEM-I RFP No. CEP-2A.

#### PROJECT SCOPE

The project scope is defined in terms of four major project requirements and their related major tasks:

1. Establish a working relationship with commercial organizations that provide materials useful in advancing career education to support routine, ongoing dissemination of information on available materials. Related major tasks include:

- . Identify major commercial organizations involved in supplying desired products to the educational community
- . Document trade associations and other organizations which have organized to promote industry effectiveness and disseminate beneficial data
- . Establish procedures for communicating with identified commercial concerns that provide initial indexing of available materials describing the material content and development status
- . Provide methods to follow up on contracts, commitments and information exchange between the Center and suppliers.

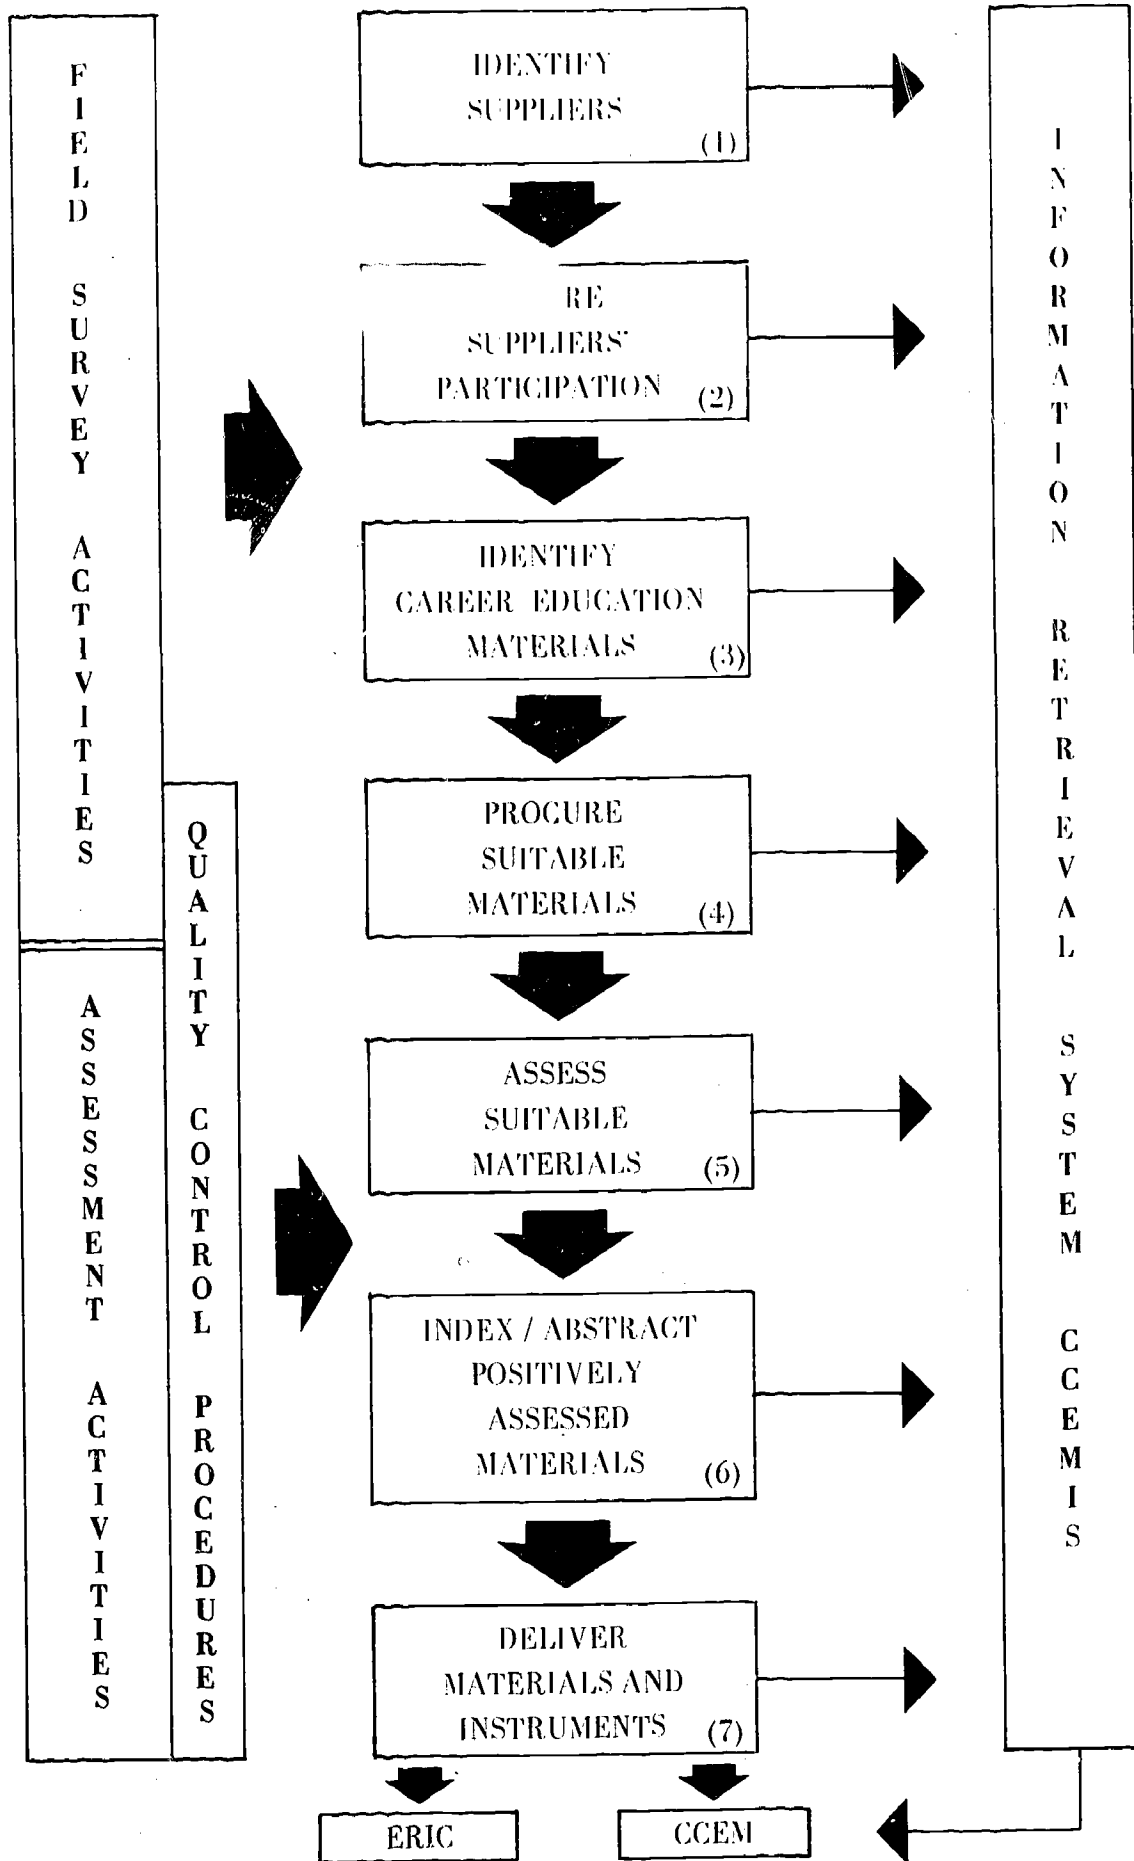

2. Develop procedures for establishing a data base (using computer processing services of a Columbus organization) which indexes and classifies available commercial materials and their sources. Related major tasks include:

- . Develop flexible methods for identifying components of the data base and related coding systems which can be implemented early in the project and applied consistently over an extended period of time. This includes identifying and classifying support activity provided by commercial organizations and material components
- . Design documents which support both survey data collection activities and initiation of computer processing
- . Document basic computer file structures which support storage of information and flexible processing of inquiries
- . Establish computer and related manual systems which meet both immediate and long-term program needs.

3. Obtain materials from commercial suppliers and complete required screening, classification, assessment, abstracting and indexing of materials commensurate with current needs of the CCEM-I program and long-term goals of career education. Related major tasks include:

- . Work with the Center staff members involved in curriculum development to establish short-term, intermediate and long-term program needs
- . Preview existing materials, including responses from previous surveys, bibliographies and other sources to identify products from commercial organizations appropriate to the Center's short-term priorities

# CONCEPTUALIZATION OF PROJECT METHOD

- Solicit sample materials that screening indicates will meet program needs; complete assessment and prepare abstract of materials determined to meet established standards
  - Procure additional copies of materials judged appropriate as required to support Center and Local Education Agency (LEA) requirements.
4. Document survey methods and procedures to support the smooth transition from initial project development efforts to routine administration by Center personnel. Related major tasks include:
- Provide Center administration with progress reports on performance and budgetary aspects of the project
  - Document administrative, coding assessment and abstracting activities which must be completed
  - Document overall results of initial project, detail recommendations for continuing efforts and establish administrative guidelines to assist in managing further survey, classification and assessment activities.

As these requirements and related tasks indicate, the project scope was extensive. It included not only a national survey of suppliers of educational materials, but the design and development of a fully documented process to maintain and update an ongoing system for tracking emerging career education materials.

## PROJECT METHODS

To meet all project objectives within CCEM-I's 5 month timeframe, a 50-member consulting team was assembled from both the educational and business communities, using national as well as local resources. A project office and assessment center was established in Columbus, Ohio.

The facing page shows the approach used to meet the requirements of a national search and assessment of career education materials. (The major project components are discussed fully in the following three chapters of this report; the system procedures designed and installed to accomplish the subtasks within each component are documented in Appendixes B through D.)

Each of the seven major project components is summarized below:

1. Identify suppliers. Four man-weeks of desk research resulted in the identification of 700 known and potential suppliers of educational materials. Appendix B contains a list of 35 sources used for initial supplier identification.

2. Secure suppliers' participation. Consulting teams based in San Francisco, Chicago and New York initiated supplier contacts by telephone and personal visits to identify present suppliers of career education materials and to secure their project participation. Supplier participation involved:

- . Identification and description of proprietary materials via completion of product profile sheets
- . Agreement to provide complimentary or examination copies for assessment
- . Permission to index and load a 200 word abstract of positively assessed material on the Education Research Information Center's (ERIC) system.

3. Identify career education materials. Completed product profile sheets were screened at the project's operation center in Columbus to identify materials which should be requested from the supplier.

4. Procure suitable materials. Material deemed appropriate to career education objectives on the basis of criteria established by CCEM was procured through material procurement request to the supplier.

5. Assess suitable materials. The Assessment Center staff verified that the material met the publication/release criteria (between 1965 through 1972). They then performed initial classification of the material. Material which passed this screen was assessed by professional educators against criteria established by CCEM staff. All first level assessments were subject to review by senior assessors. Senior assessors also provided final review of global judgments related to the material's suitability to CCEM requirements.

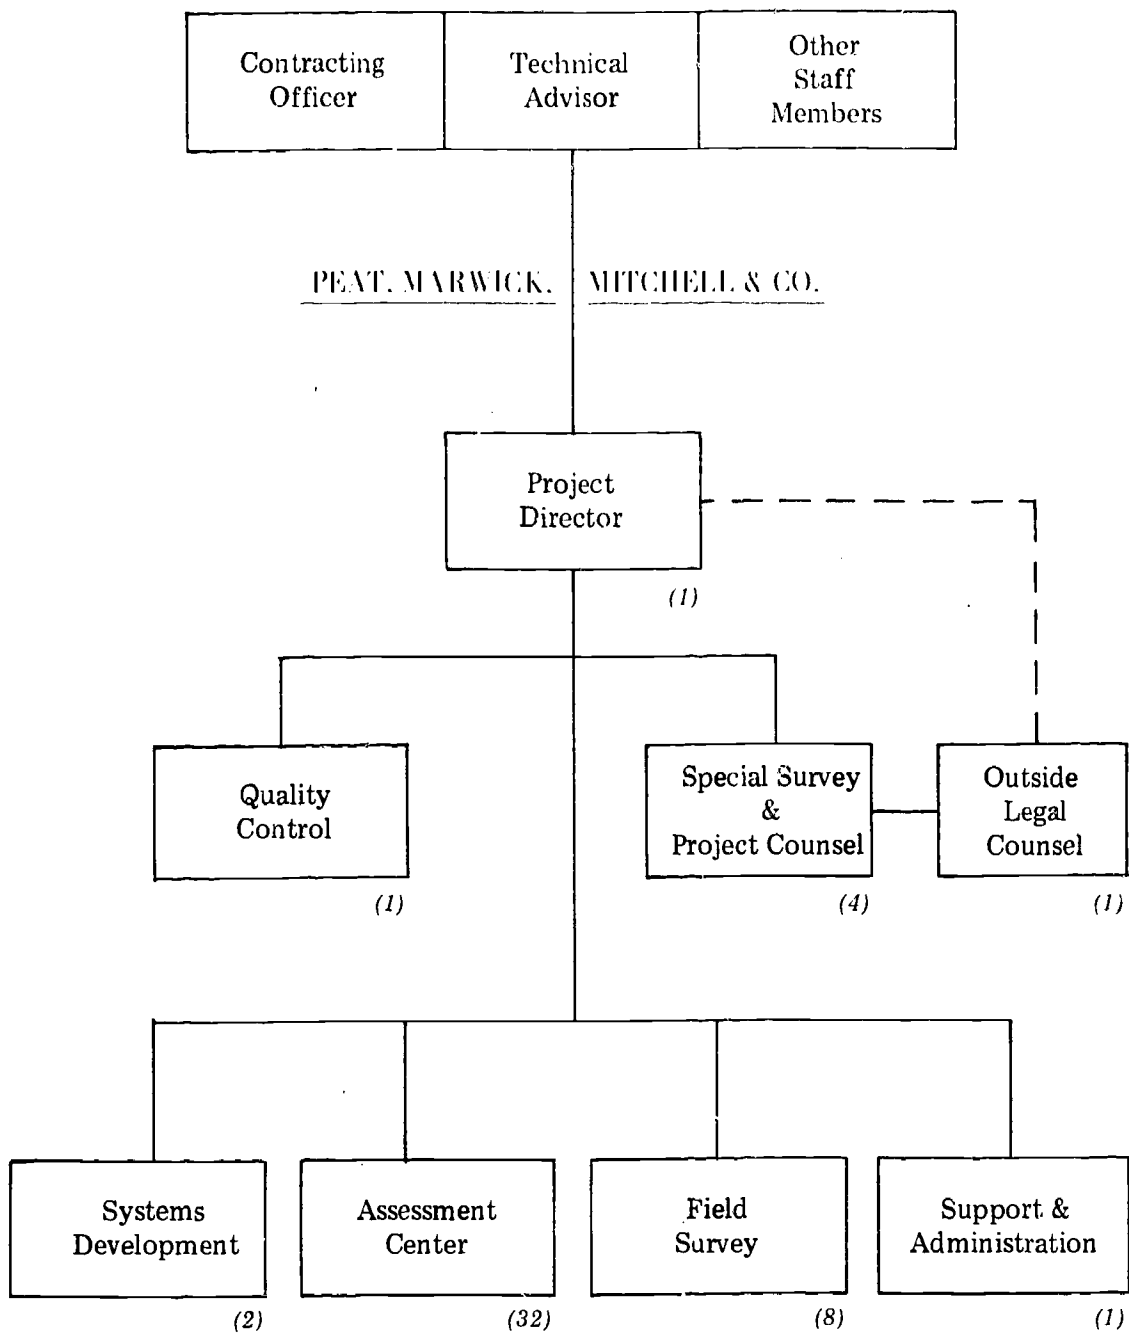

The final step in the material assessment process was a quality control check by the project quality control officer using three different methods on a random stratified sampling basis. Material which successfully met all existing criteria and passed the quality control check was then determined to be "Positively Assessed Material" (PAM) and was routed for indexing and abstracting.

6. Index and abstract. Positively assessed material was indexed (per ERIC) and a maximum 200-word abstract was written using basic ERIC descriptions. Upon completion, PAMs were prepared for delivery to ERIC staff.

7. Deliver materials and instruments. A final check of the required instrumentation was performed on PAMs. Instruments accompanied by complimentary copies were routed to the ERIC staff. Where the supplier had provided examination copies, the instruments only were routed to ERIC, and the examination copies were returned to the supplier. The ERIC staff performed the quality control check on the appropriateness of the index/abstract document.

# PROJECT ORGANIZATION

## CENTER FOR VOCATIONAL & TECHNICAL EDUCATION

*Number in parenthesis indicates the number of professional staff within each function.*

Total documentation was maintained throughout this process. Nearly 90 percent of the total documentation was inputted as generated to the computer based information retrieval system designed specifically for this project. Actual computer system maintenance was performed by a local service bureau. A basic system objective was version to client operation.

## PROJECT ORGANIZATION

To implement the survey method, the project team efforts were organized into 5 system components:

- . Field Survey Activities
- . Assessment Center Operations
- . Quality Control Procedures
- . Systems Development (Data Retrieval)
- . Support and Administration.

The facing page shows the project staff organization. The Project Director had the assistance and counsel of selected PMM&Co. partners and outside legal counsel. The PMM&Co. partners served in an advisory capacity and provided quality checks on the project by participating in milestone report meetings. The outside legal counsel reviewed copyright considerations in indexing and abstracting assessed materials and provided general legal counsel. The following paragraphs briefly describe the major subtasks of each function:

1. Field Survey with responsibility for:
  - . Identifying commercial suppliers
  - . Identifying career education materials
  - . Conducting the national survey contacts
  - . Performing initial classification and screening of identified materials
  - . Initiating material procurement requests for materials apparently directed at career education.
2. Assessment center with responsibility for:
  - . Performing materials assessment
  - . Indexing and abstracting materials

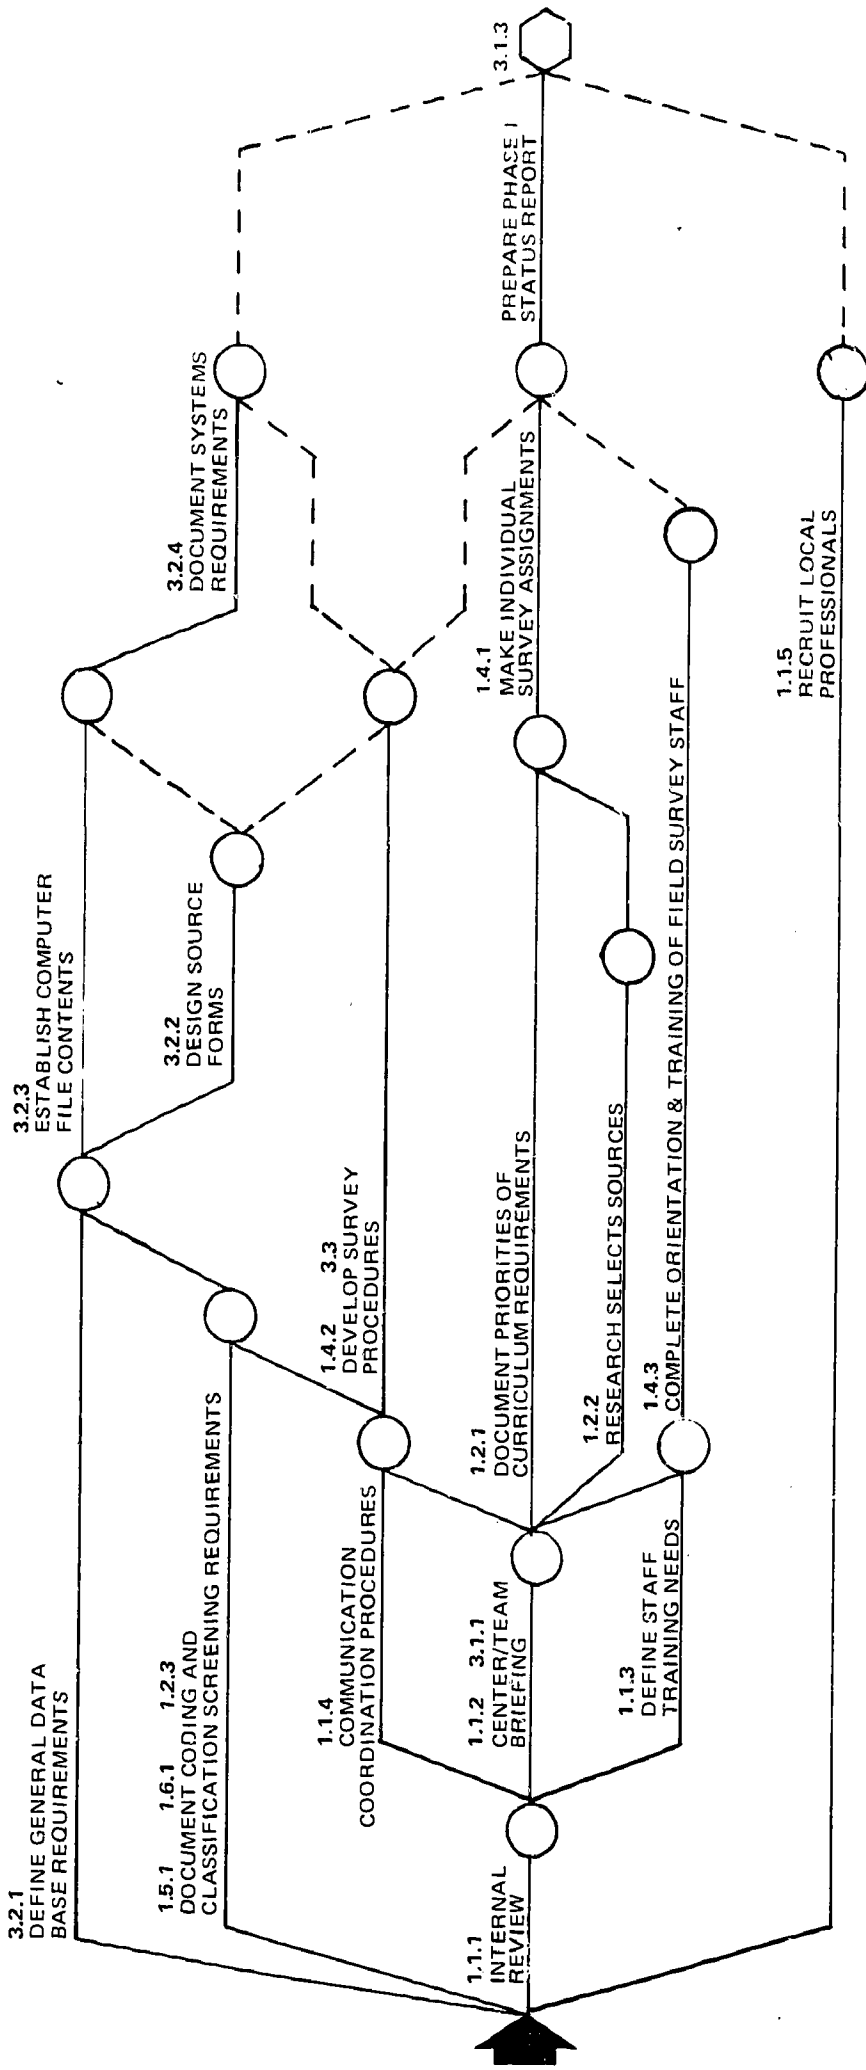

- . Performing final assessment review
- . Maintaining material control procedures for entry and exit of materials
- . Delivering materials to ERIC
- . Verifying data for input to CCEMIS.
- 3. Quality control with responsibility for:
  - . Consulting on assessment procedures design
  - . Initial staff development and training for assessment personnel
  - . Assisting in designing and developing Assessment Manual
  - . Conducting ongoing quality control checks of assessed materials
  - . Specifying quality control remedial tasks.
- 4. Systems developments with responsibility for:
  - . Documenting data base requirements
  - . Initial development and procedure specifications to support project activities
  - . Designing source forms
  - . Designing general system
  - . Selecting outside service bureau
  - . Conducting ongoing review of service bureau performance.
- 5. Support and administration with responsibility for:
  - . Task/expense reporting on a two-week basis
  - . Maintaining all project expenditure records
  - . Assisting in budget forecasting, revision and management

Providing project management data in compliance with terms of contract.

The project components, major tasks and functional activities are indicated on the project schedules shown on the following pages. The project was completed as scheduled, although portions of the schedule were revised within the Phase II timeframe (see Appendix E).

One final measure of the project scope is that more than five man-years (more than 10,000 hours) of effort were applied within the 4-month project life.

# PHASE I - SURVEY ACTIVITIES & SELECTED TASKS

4 WEEKS

PHASE I

0.0.0 TASK NUMBER

PHASE II, III & IV SURVEY ACTIVITIES AND SELECTED TASKS

## II - FIELD SURVEY AND MATERIALS PROCUREMENT METHODS

## CHAPTER II

### FIELD SURVEY AND MATERIALS PROCUREMENT METHODS

This chapter presents our general approach and describes the major field survey tasks. The details on field survey procedures, forms documentation, and resources are contained in Appendix B.

#### SURVEY APPROACH

The primary objective of the survey was to achieve a large number of appropriate source contacts which would generate completed product profile sheets so that the materials procurement process could begin with a significant flow of materials. We attempted to achieve this goal with minimum procurement of inappropriate materials to maximize the time and efforts expended at the Assessment Center in screening and evaluating materials.

The initial sourcing effort included a thorough search of the following:

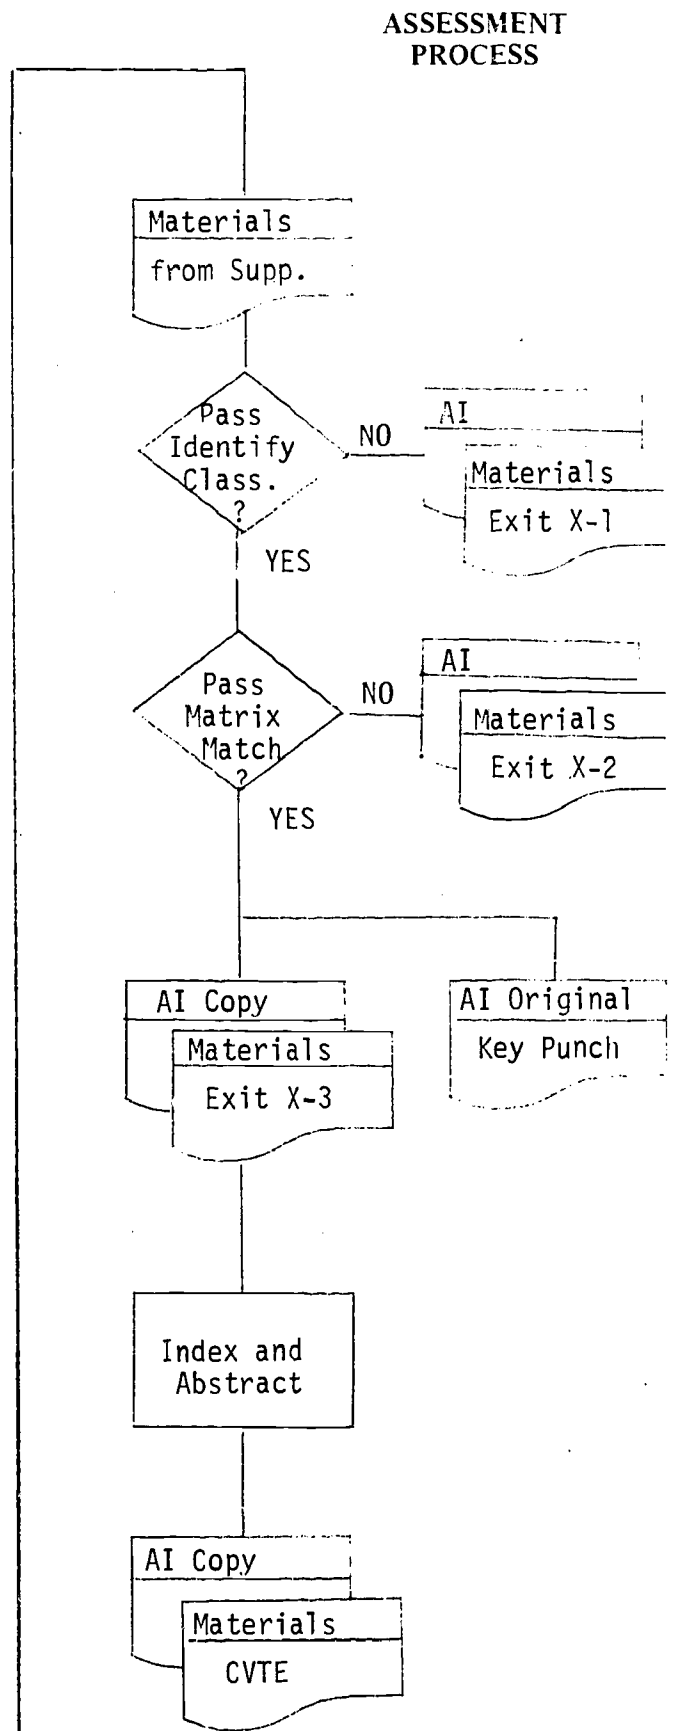

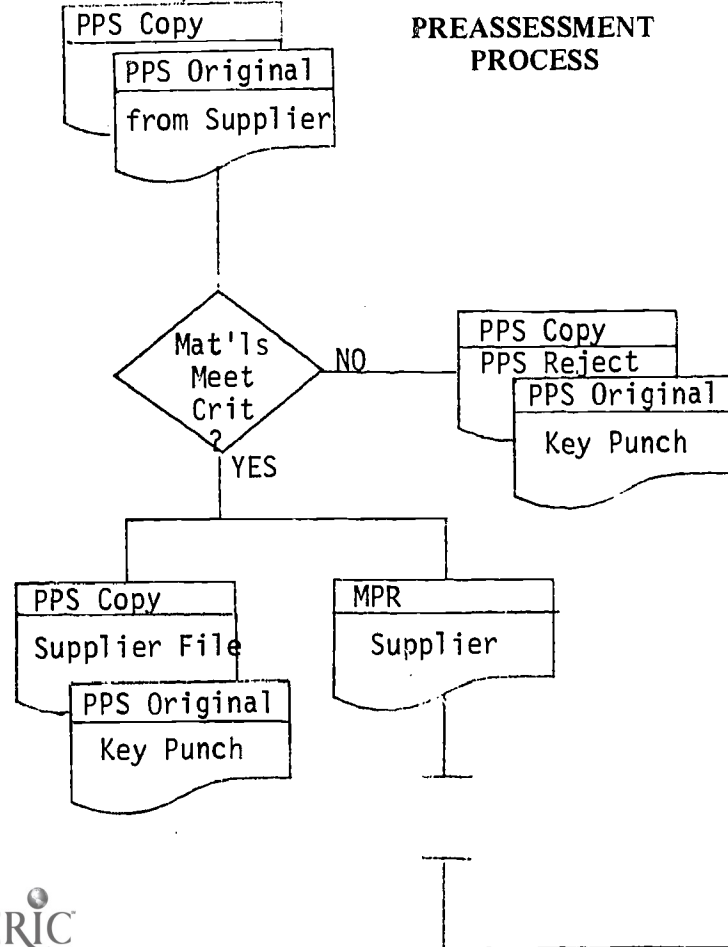

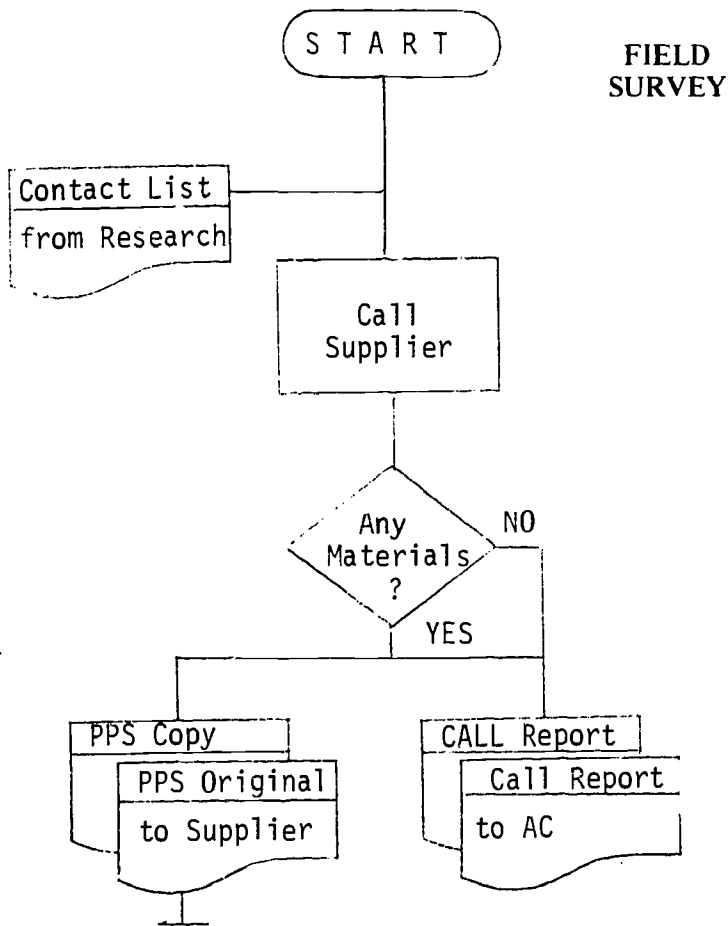

- . Files and other resources of the CVTE
- . Information systems such as ERIC and AIM/ARM
- . Products of recent research in your career education projects
- . Files and data generated during the first CCEM assessment project
- . Files and publications of associations most relevant to the producers of career education materials
- . Commercial indexes and catalogs
- . Recognized experts in the field.

The intended results of the research effort included:

1. The generation of an extensive and comprehensive inventory of commercial firms most likely engaged in the production of career education materials.
2. The identification of businessmen and professional personnel who would be likely sources of relevant data and source information.
3. The identification of career education materials suitable for initial procurement efforts.

The field survey effort, which included telephone, personal and mail contacts with identified sources and/or potential sources, was directed toward achieving these results.

The field survey efforts were centrally directed from Columbus, Ohio but were organized and conducted on a regional basis in New York, Chicago and San Francisco. Teams were assembled in each of these cities to initiate contacts and perform the necessary followup with sources in their regions. The teams were staffed with professionals who had both the training and experience necessary to rapidly gain the cooperation and participation of commercial suppliers.

An initial test of suppliers' cooperation was conducted during the first week of field effort among 25 to 30 sources located in New York and Chicago. The results of the field test verified the survey approach and provided insights for modifying the procedures for use in the full-scale survey efforts.

### FIELD SURVEY TASKS

The field survey function was responsible for procuring complimentary copies of examination copies of materials from commercial suppliers. The major tasks involved were:

- . Identifying suppliers
- . Securing suppliers' participation
- . Initiating product profile sheets on identified materials
- . Following up to facilitate material procurement.

The facing page shows the procedures and steps used to procure materials for assessment.

The following pages show the Call Report and Product Profile Sheet used to document the initial steps of the procurement process. These are two of the four basic input documents to the information retrieval system.

Before the full scope implementation of the supplier contact program, a 1-day training session was conducted for each of the three regional teams. The training session included:

- . Project overview
- . Description of the total procurement and assessment process and general search objectives
- . Suggested telephone procedures and criteria for onsite visits to sources
- . Suggested approaches for securing source cooperation
- . Detailed review of field survey documentation requirements including call reports, product profile sheets, material acquisition requests
- . Review of daily phone contact procedures with the Assessment Center.

The initial telephone contact with suppliers was followed with a letter (shown on the following pages) which formally requested the suppliers' participation. Appendix D contains the telephone procedure guide and all form letters used during the survey; a detailed summary of the desk research conducted to identify suppliers; and a listing of the resources used for this purpose.

PEAT, MARWICK, MITCHELL & CO.  
CERTIFIED PUBLIC ACCOUNTANTS  
222 SOUTH RIVERSIDE PLAZA  
CHICAGO, ILLINOIS 60608

August, 1972

Dear Sir:

Peat, Marwick, Mitchell & Co. (PMM&Co.) has been designated as subcontractor to the Center for Vocational and Technical Education: The Ohio State University by the USOE to conduct a national survey and assessment of selected career education materials commercially available.

In summary, PMM&Co. has been engaged to identify, procure and assess commercially available career education materials against criteria established by the Comprehensive Career Education Model (CCEM) which has been created by USOE and the Center. Over the ninety-day period of the contract, PMM&Co. is to determine the suitability of available career education materials for grades K-14 for the career development of each student which:

- . Restructures the entire educational program around the student's real-life developmental needs
- . Integrates the academic knowledge and skills with occupational training
- . Assumes that each existing student will be prepared for a future career education program and for entry into an occupation
- . Provides for each student a program relevant to his becoming a self-fulfilled productive and contributing citizen
- . Incorporates community resources and non-school educational opportunities.

Materials which meet CCEM and career education needs will be abstracted, indexed and entered into the national information storage, retrieval and dissemination system for vocational-technical education through the Vocational Technical-Education Resource Information Center (VT-ERIC) clearing house.

To complete this task, PMM&Co. has been in telephone contact with companies and industries throughout the country which are serving the career education market. Based on our findings, we have learned that your firm has materials which hopefully will be made available for our processing.

August, 1972

2

Specifically, we request:

- (1) Completion of a product profile sheet for each piece of career education material which you market.
- (2) Agreement to provide copies of materials which we request after review of the product profile sheets.

With authorization of CCEM and USOE officials, we plan to make available at the conclusion of the project a listing of:

- . Companies serving the career education market
- . The number of career education materials identified by grade level and career education element
- . A summary of assessed materials by degree of suitability to CCEM requirements by grade level and career education elements.

Of course, no identification will be made of materials by title or source.

We appreciate the preliminary indication of the willingness of your company to participate in the project. Your cooperation and assistance in having the attached product profile sheets completed and returned to us at the earliest possible date will be welcomed.

If you have questions regarding our request, please contact:

Dr. Voie Coy  
41 South High Street  
Columbus, Ohio 43215  
(614) 221-7258

Thank you for your help.

Very truly yours,

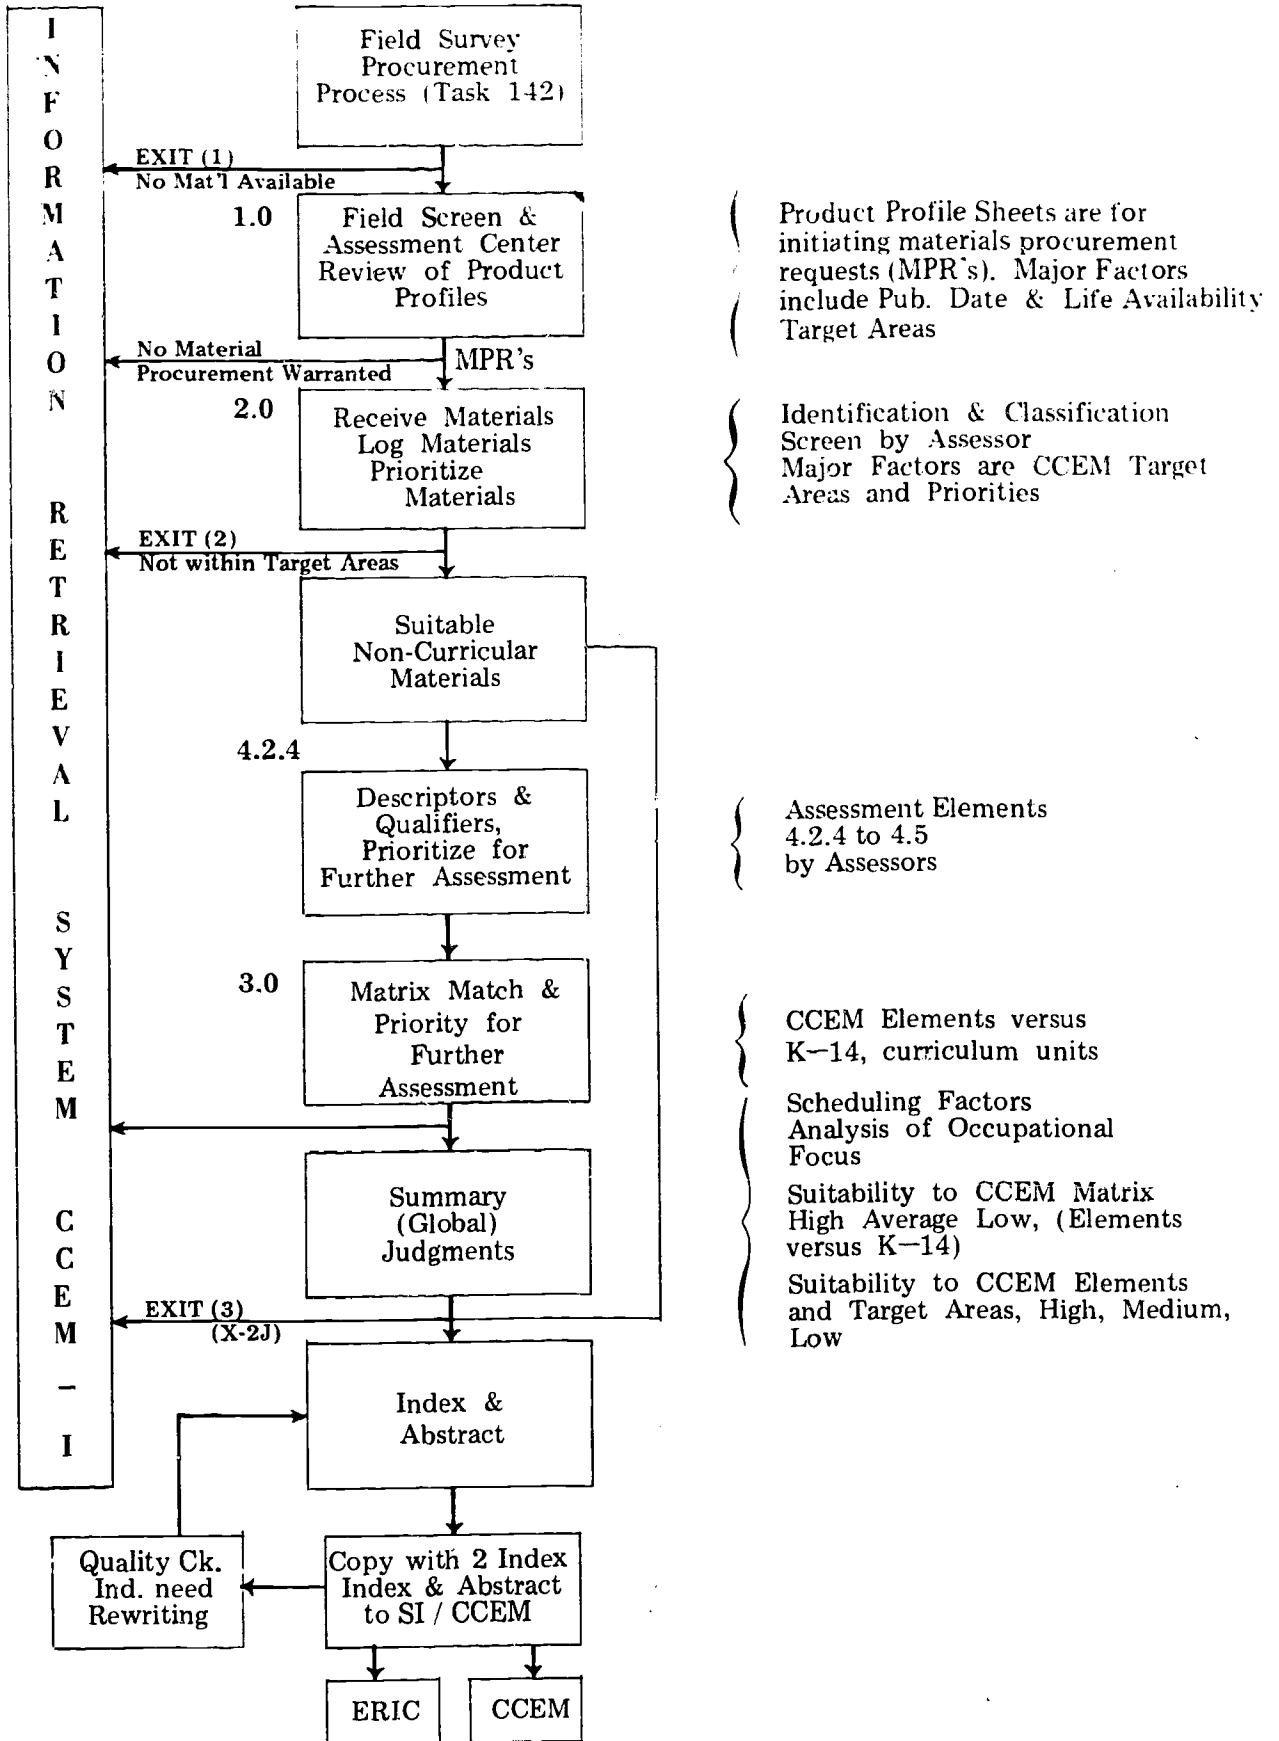

PEAT, MARWICK, MITCHELL & CO.

Clyde N. Carter  
Principal

### **III - MATERIALS ASSESSMENT METHOD**

## ASSESSMENT PROCESS SCHEMATIC

## CHAPTER III

### MATERIALS ASSESSMENT METHODS

The chapter briefly describes the materials assessment methods used in processing career education materials. Specifically, it presents an overview of the process, the assessment instrument, method of assessing, and quality control procedures. Appendix C presents a full explanation of all aspects of assessment.

#### THE ASSESSMENT PROCESS

The Assessment Center revolved around two interrelated functions:

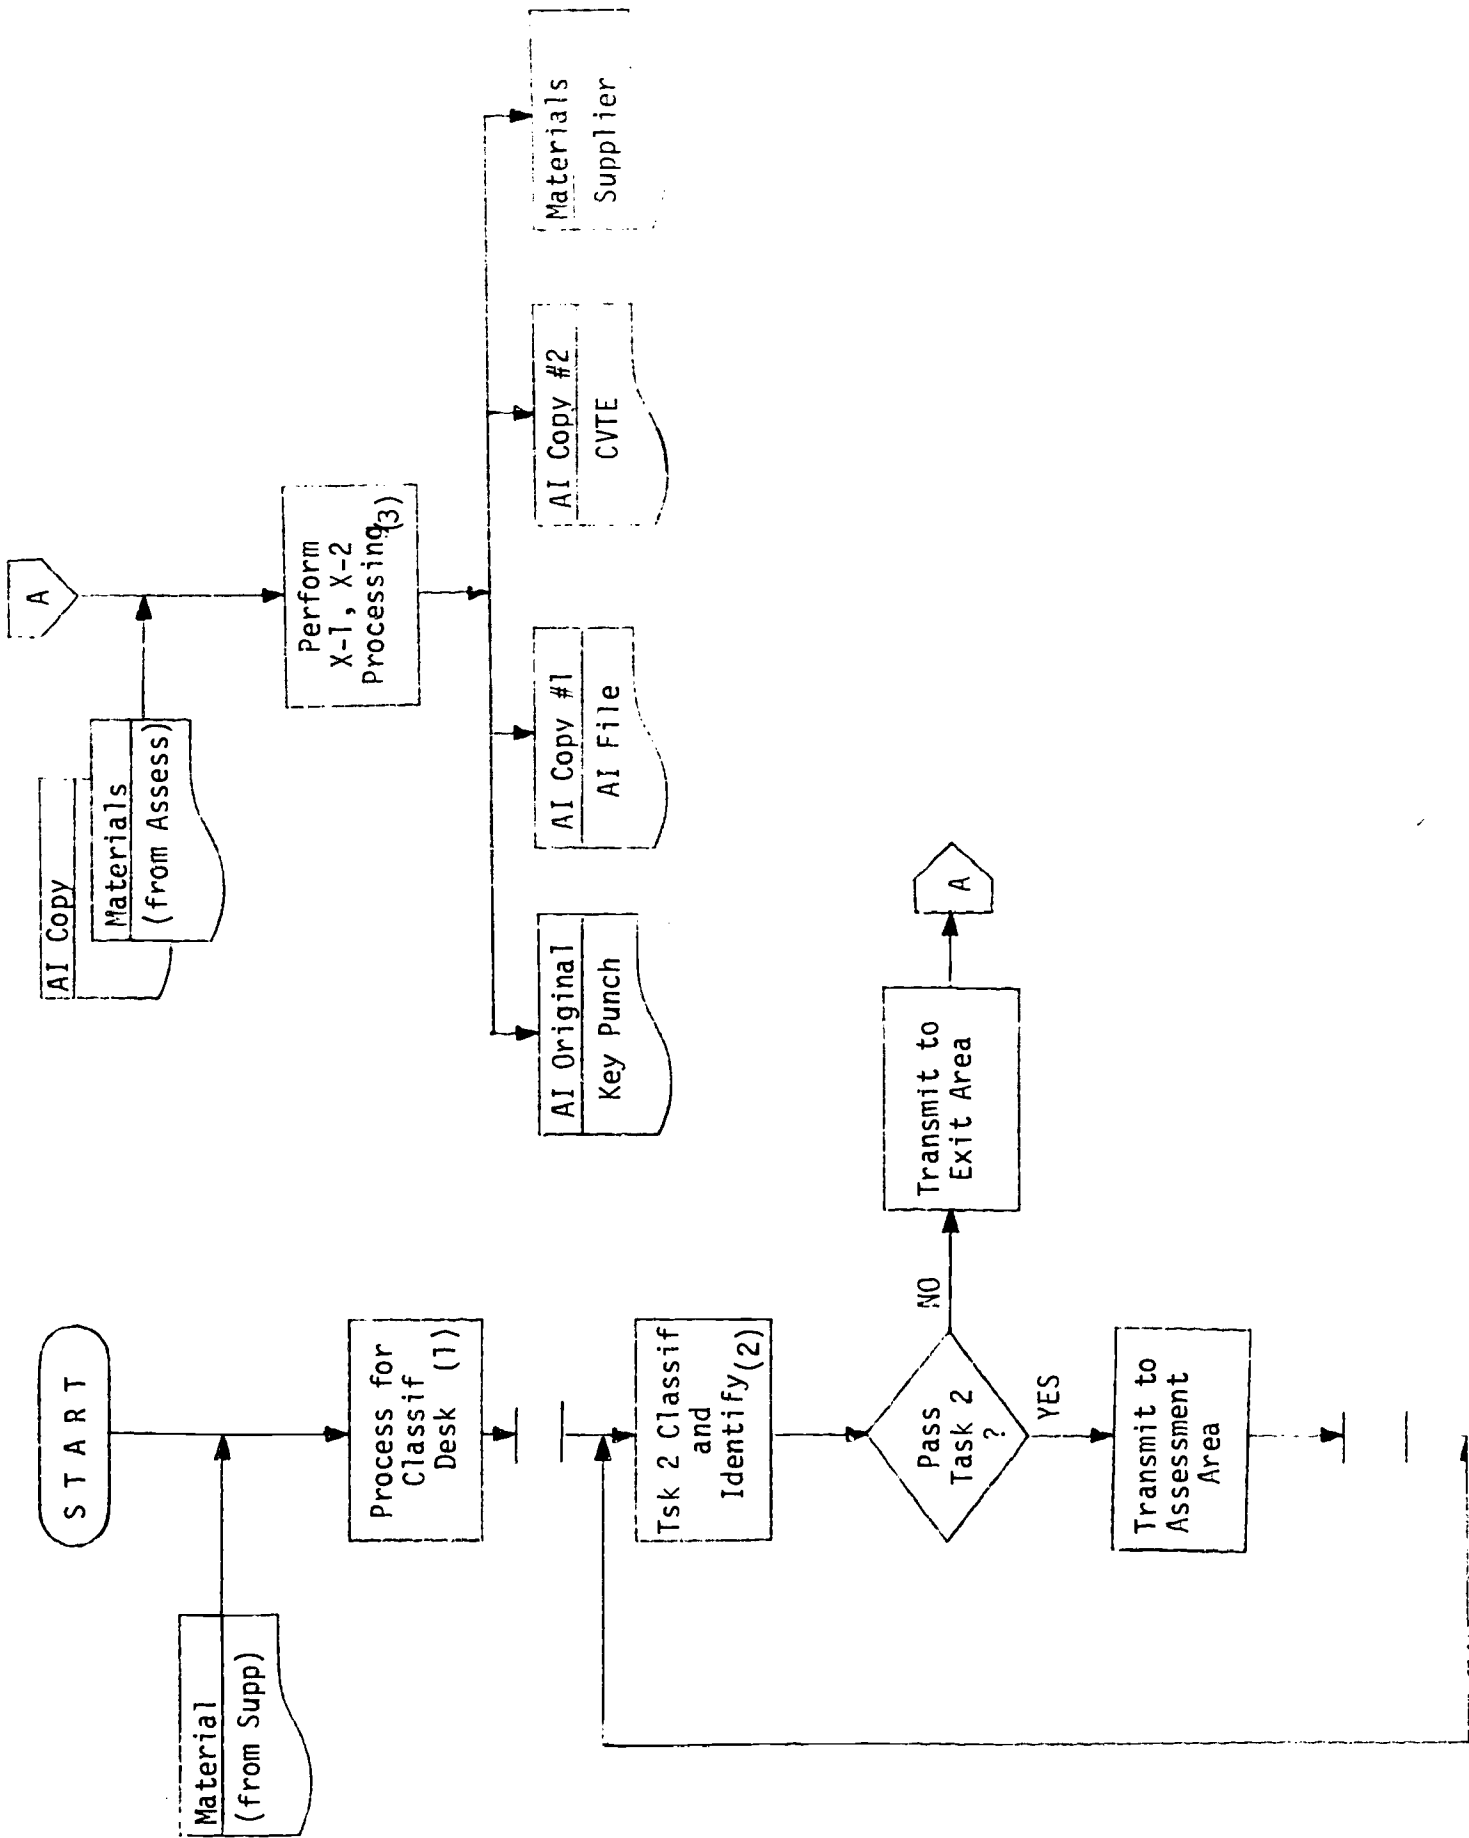

1. The flow of material from entry into the system, through the priority screens and direct assessment, on through exiting and shipment to the client.
2. The records control of all material and entry of data into the information retrieval system.

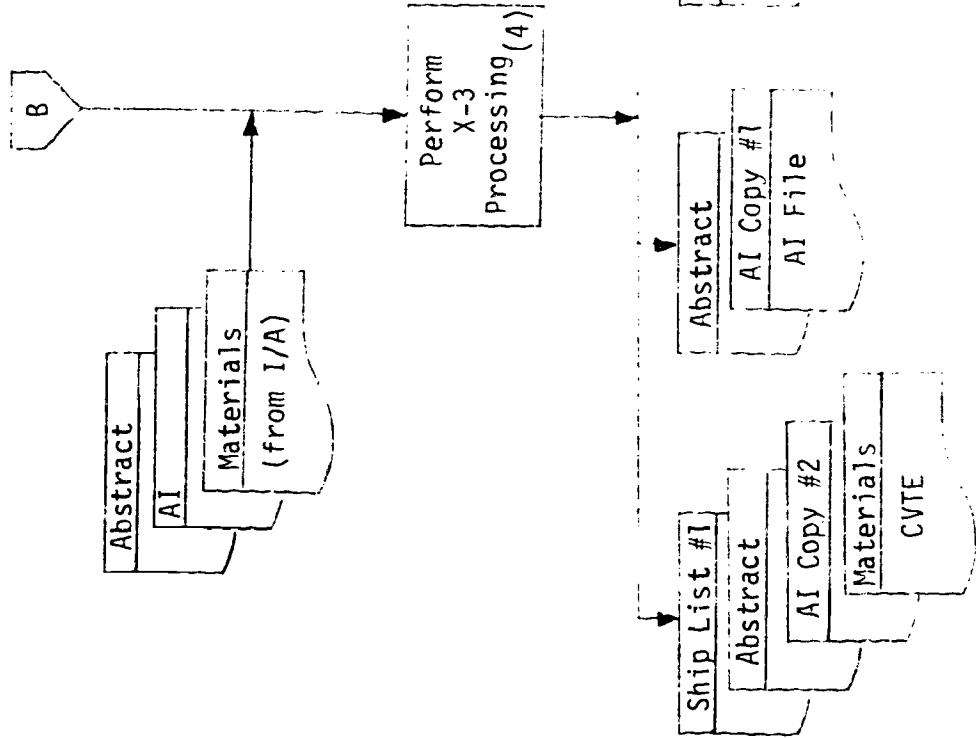

The procedural and sequential flow of Assessment Center activities is shown on the facing page (refer to steps in the process). This schematic does not represent the physical movement of an item. The organization of the Assessment Center as a total process and the actual work and record flow are shown on the following pages. The work-flow for each record or piece of material and the relationships of work stations are also indicated.

The assessment process included the following conducted in logical sequence:

1. The field survey team contacted suppliers and asked for materials which matched the Product Profile Sheet.
2. The completed Product Profile Sheets were reviewed at the Assessment Center to determine if the materials would be procured and if they were of "immediate-access" priority or could be postponed until later in the project.
3. Materials received at the Assessment Center which appeared to meet CCEM priority requirements were entered into the assessment process immediately or held in storage ("Hold") until a later time because of low immediate priority (need determined by the client).
4. Material entered into the assessment system which had been identified and classified according to the CCEM matrix arrived at a "Go/No-Go" point, (i.e., it matched or did not match the matrix requirements):
  - . Items which did not match were exited from further assessment
  - . Items which matched were assessed fully unless they were put in a "Hold" category.
5. Each item was assessed for its overall suitability and applicability to the project requirements.

ASSESSMENT PROCEDURE

- (1) . Open boxes
- . Check contents against any shipping documents
- . Transmit any invoices to accounting
- . Sort materials into Material Control Book (Entry) categories
- . Indicate date in received column of Material Control Sheet
- . Prepare Material Control Card
- . Label materials with Document # and Cost Code (from Mat'l Control Sheet)
- . Box and transmit to Classification Desk

- (3) . Check AI for completeness and materials for presence
- . Record X-1 or X-2 on Materials Control Sheet
- . Xerox 2 copies of the AI and distribute
- . Ship materials back to supplier (include letter)
- . Record shipping date on Materials Control Sheet
- . Record "Supplier" on Materials Control Sheet in "Where Sent" column

- (2) . Verify sort of separate items
- . Prepare PPS's if necessary (materials will be assessed separately)
- . Head up Assessment Instrument
  - Document # (CR #, PPS #)
  - Title
  - Author
  - Publisher
- . Complete first page of Assessment Instrument

- (4) . Check AI for completeness and materials for presence
- . Record X-3 on Materials Control Sheet
- . Xerox 2 copies of the AI and distribute
- . Xerox 1 copy of the Abstract and distribute
- . Prepare Shipping List and Xerox 1 copy for Shipping File
- . Record "CVTE" and date on Materials Control Sheet
- . Prepare materials for shipment to CVTE

AI = Assessment Instrument  
I/A = Index/Abstract

Thus, the assessment process consisted of screens or judgment decision points about each item: "Does the item meet the client requirement?" and "Is the item needed by the client now or can it be delivered later?"

### THE ASSESSMENT INSTRUMENT

The assessment instrument is shown on the following pages. Its content was determined on the basis of client need and a quality level of educational evaluation. The format of the instrument was dictated by assessment procedural flow requirements, the psychological set of the assessors as they worked through the problem, and the data system requirements. The format was also affected by the need to ensure quality by reducing error possibility (e.g. recopying marks) and by the procedural and physical flow of materials. The design process was a joint effort of CCEM staff and the project consultants.

The assessment instrument was labeled, numbered and attached to the curriculum materials to be assessed. Two official numbers on the instrument made up the Document Number: the Call Report Number and the Product Profile Sheet Number. The Product Profile Sheet number was used to keep track of the materials and assessments instruments while they were in the Assessment Center.

Materials were assessed by assessors functioning in their areas of expertise. Senior assessors made the summary (global) judgments and evaluated the assessors judgments. Other specialists and technicians performed specialized assessment functions which did not occur routinely (e.g., 5 D.O.T. classifications).

### INDEXING AND ABSTRACTING

Material which passed all of the screens was judged positively assessed. Positively assessed material was processed for indexing and abstracting as prescribed by ERIC indices and descriptors in preparing abstracts of up to 200 words. Materials and their instrumentation were then routed to the ERIC staff for inclusion in the ERIC system.

Clerical and administrative technicians handled records management, item coding and entry and exit processes for materials.

### QUALITY CONTROL

An integral part of the assessment process was the maintenance of uniform standards of consistency and accuracy among assessors and within the performance of an individual assessor. The quality control function was the assigned responsibility of a senior professional designated as the Quality Control Officer. The Quality Control Officer actively participated in:

- . Project design
- . Assessor development and training
- . Design and development of the Assessment Center Staff Manual
- . Maintenance of quality performance during the ongoing assessment process.

Differentiated staffing: \_\_\_\_\_

Special support personnel: \_\_\_\_\_

Specially trained instructor: \_\_\_\_\_

#### SCHEDULING & ORGANIZATION

If this item is checked, indicate the nature of the grade organization required and the nature of the time requirement outside the normal day or year.

Unique grade organization: \_\_\_\_\_

Outside normal day/year: \_\_\_\_\_

The Assessment Center Director and Supervisor performed daily quality control checks through over-the-shoulder coaching, retraining of assessors as needed and, answering questions when assessors faced interpretation problems. In addition, Senior Assessors (professionals with considerable experience in instructional materials development and curriculum and program development) provided judgments on a material's overall suitability to CCEM requirements. Finally, the Quality Control Officer performed three types of procedural checks of completed assessment documents.

1. Total Check. At least 10 percent of the materials which had been assessed were set aside. The Quality Control Officer used the form, shown on the following page to make an independent reassessment and to verify the completeness and legibility of work, interpretation of every item, correctness of the decision and the internal consistency between interrelated items. Documents with errors were returned to the Supervisor.

2. Blind Check. A weekly sample of materials which had exited were restarted through the assessment procedure by a second assessor. The completed assessment instruments of the two assessors were compared by the Quality Control Officer to determine if the interpretation and judgment of the two assessors was consistent.

3. Spot-Check. During on-site visits, the Quality Control Officer sampled completed items to spot-check certain crucial items (e.g., exit decisions, career element, consistency between matrix elements).

In total, more than 16 percent of the assessment instruments were subjected to a quality control check by the Quality Control Officer.

#### **IV - COMMERCIAL CAREER EDUCATION MATERIAL INFORMATION SYSTEM**

**COMMERCIAL CAREER EDUCATION  
MATERIALS INFORMATION SYSTEM  
(CCEMIS)**

## CHAPTER IV

### COMMERCIAL CAREER EDUCATION MATERIALS

#### INFORMATION SYSTEM (CCEMIS)

The Commercial Career Education Materials Information System (CCEMIS) is a computerized system for storing and retrieving descriptive and evaluative data concerning career education materials. The system accepts all data recorded for each item identified as career education material. The retrieval system component can seek out and print all documents relevant to a particular sort descriptor or combination of descriptors such as Grade Level, Target Area, CCEM Element/Target Area, etc.

CCEMIS accepts descriptors of career education materials from input forms for data storage and retrieval. The facing page shows the overall operation of the system. Data is entered into the system from three basic forms: Call Report, Product Profile Sheet and the Assessment Instrument. A fourth form, the Change Form, is used to modify or add data to existing documents (Appendix D).

The input data creates two files:

1. Call Report File is maintained as a tape file and used only for the report or organizations contacted (Appendix D). It has one entry for each company or corporate division to which a call was placed.

2. Document File Master contains all information from the Product Profile Sheets and Assessment Instrument. All entries on the file are referred to as documents and are identified with nine digit document numbers. The first four numbers are the Call Report number, unique to each company, and the last five numbers are the preprinted number from the Product Profile Sheet.

A document is first entered in the data file when a Product Profile Sheet enters the system with one of the following General Status Codes:

- A - Product Profile Present,  
No Material Requested.
- B - Product Profile Present,  
Material Requested.

The material from the Product Profile Sheet is entered into the file and space is left for adding all information contained in the Assessment Instrument. When the material is assessed and enters the system, the information from the Assessment Instrument is entered into the system and the General Status Code is automatically changed as follows:

- C - Assessed, Exits System at Exit 1
- D - Assessed, Exits System at Exit 2
- E - Assessed, Exits System at Exit 2  
Under Condition "J"
- F - Fully Assessed, Exits System at Exit 3.

The system produces six reports, examples of which are reproduced in Exhibit 1:

1. Edit, Update and Change List. Prepared each time new information is added to the file, primarily for system control.

2. Organizations Contacted. Lists all organizations contacted and the product profiles submitted by the organization.
3. Detail File Report. Lists all information on the document file for backup purposes.
4. Title-Author Report. Lists the Document Number, Title and Author of all documents on the file.
5. Statistical Report. Provides statistical information about the total items in the file.
6. Material Selection Report. Provides the information needed by an educator for a specific application for career education material. The user can specify all the conditions of his environment and requirements and CCEMIS will retrieve and list all documents on the file which meet his specific needs.

The specific procedures for using CCEMIS are documented in Exhibit 2. The system has been designed to provide maximum information with minimum user effort.

**CCEMIS Reports  
(Illustrative Only)**

- . **Edit, Update and Change List (Call Report)**
  
- . **Organizations Contacted**
  
- . **Detail File Report**
  
- . **Title - Author Report**
  
- . **Statistical Report**
  
- . **Material Selection Report**

3. SELECTED COMMERCIAL/INDUSTRIAL CORPORATIONS	130	15
4. INDIVIDUALS AND MISCELLANEOUS ORGANIZATIONS	<u>11</u>	<u>1</u>
TOTAL	864	100%

## CHAPTER V

### SUMMARY OF FIELD SURVEY EFFORTS

This chapter describes the scope of survey activities and the results of the procurement efforts.

#### SURVEY CONTACTS

Extensive efforts were made to identify commercial or quasi-commercial businesses that have career education materials available. The detailed steps and procedures for doing so and the system for procuring those that meet CCEM-I objectives are set forth in Chapter II of this report.

As shown on the facing page, 864 contacts were made with commercial producers of educational materials, industrial/commercial firms, Chambers of Commerce and individuals who reportedly had career education materials available. Of this total, 580 were commercial suppliers. This group was judged as the primary market target. It is estimated that the 580 firms represent 75 to 85 percent of the suppliers of career education materials and that they produce from 85 to 90 percent of the materials available.

Of the 580 commercial suppliers contacted, 313 (54 percent) reported that they had materials available and were willing to cooperate as shown on the following page. In addition to having materials currently on the market, 128 of the 313 reportedly have additional materials under development. Also, 35 of the 267 suppliers that now have no materials available indicated that materials were being readied for the market. Hence, more than 340 of the 580 firms have or will soon have career education materials available commercially.

#### MATERIALS PROCESSED

Most of the 313 suppliers responded to the request for materials with a single contact. However, several required five or six. In total, 1,130 contacts were made by field survey personnel to obtain the materials judged appropriate for assessment (see following pages).

On the basis of initial field survey contacts and the suppliers' estimates of the number of materials that would meet CCEM-I criteria for assessment, 5,128 Product Profile Sheets were mailed. Of this number, 3,607 were returned completed. It is assumed that after receipt of printed materials, suppliers determined that some of the materials they had originally identified as applicable were not.

A review of the Product Profile Sheets resulted in the initiation of 2,766 Material Procurement Requests. This represented approximately 77 percent of the materials identified. This high percentage of applicable materials was attributable to the accuracy of the Product Profile screening process.

Approximately 85 percent of the Requests for Materials resulted in their receipt, and all materials were assessed. Of the 2,344 units received (12,859 pieces of materials), 2,016 were positively assessed. All positively assessed materials were indexed and abstracted for subsequent entry into the Education Research Information System (ERIC).

SURVEY PARTICIPATION

**SELECTED CHARACTERISTICS  
OF ASSESSED MATERIALS**

Materials applicable to specific grade levels (indicated by suppliers) as a percent of the total materials procured and assessed ranged from 2 percent for kindergarten to nearly 14 percent for grades 12 as shown on the following page. By grade groupings, nearly 22 percent were applicable to K-6, 27 percent to grades 7 - 9, 36 percent to grades 10 - 12, and 13 percent to grades 13 and 14.

**MEDIA CHARACTERISTICS  
OF SCREENED MATERIALS**

<u>TYPE MATERIAL</u>	<u>AMOUNT</u>	<u>PERCENT</u>
1. PRINTED	2270	54%
2. FILM	1362	32
3. MANIPULATIVE	110	3
4. AUDIO-VISUAL	<u>447</u>	<u>11</u>
TOTAL AMOUNT	4189*	100%

**\*The count is greater than 2344 due to multi-media packaging of units.**

Of the materials assessed, more than 50 percent were printed as shown on the facing page. Approximately one-third were film and the remainder were either audio-visual or manipulative.

Suppliers were requested to indicate the selling price of materials on the completed Product Profile Sheets. The responses are shown on the following page. The costs ranged from a few cents for a piece of printed material to more than \$8,000 for a set of films. Of the 3,607 Product Profile Sheets processed, suppliers indicated that the cost of 2,388 (66 percent of total) were available at \$100 or less. However, a relatively large number - - 16 percent - - did not include cost information.

**COST DISTRIBUTIONS OF  
SCREENED MATERIALS\***

	<u>COST RANGE</u>	<u>NUMBER</u>	<u>PERCENT</u>

5.	OVER \$750	69	1.9
6.	UNKNOWN	<u>561</u>	<u>15.6</u>
	TOTAL	3607	100%

\*Based on completed Product Profile Sheets.

## VI - FINDINGS AND RECOMMENDATIONS

## CHAPTER VI

### FINDINGS AND RECOMMENDATIONS

The findings resulting from our engagement are presented in this chapter, followed by our recommendations for CCEM actions.

#### FINDINGS

Findings resulting from the assessment of materials are presented in tabular form in Appendix A. Because multiple responses could be made in several judgments, statistical treatment is not always valid without qualification. In addition, several judgments were highly subjective.

The Quality Control Function carefully monitored the consistency of responses by individual assessors and responses from different assessors on similar materials. However, the comparative frequency, rather than number of responses, is a more reliable indicator of the applicability and quality of materials assessed against CCEM criteria.

It is estimated that 75 to 80 percent of the suppliers of commercial career education materials were contacted in the Field Survey effort. A review of these contacts by publishing organizations and research groups indicates that these firms produce from 85 to 90 percent of the materials available. The time and cost of obtaining the remainder of materials was judged excessive at this time.

The Field Survey procedure included careful screening (through structured interview guides and a review of catalogs) of the appropriateness of materials before the decision was made to enter them into the assessment process. Hence, 86 percent of the materials entering the assessment process were positively assessed. Of the 14 percent of the materials which exited the process, 9 percent were classified as non-career education material or incomplete units. The remaining 5 percent exited because they did not fit the content-discipline, CCEM target area emphasis, CCEM consumer population or element/grade level.

Nearly 40 percent of the cooperating suppliers classified themselves as independent commercial and an additional 20 percent as affiliated commercial organizations. Approximately 11 percent classified their organization as a film producer or distributor. Of those remaining, most did not indicate type of organization.

Only four firms declined to participate in the project. However, only 20 - 30 percent of the cooperating companies made their material available on a complimentary basis.

During the project, 33,614 pieces of material grouped in 3,607 units were identified. As indicated earlier, many units contained large numbers of individual pieces as sets or series. In addition to this relatively large amount of materials now available, 162 of the 580 commercial suppliers (28 percent) indicated that career education materials were under development.

Of the materials entering the assessment process, 54 percent were printed. Approximately 32 percent were classified as film. The remainder were manipulative and audio-visual.

The cost of materials ranged from a few cents per piece of material to \$8.000 for one set of films. However, 66 percent of the more than 3,600 units entering the assessment process sell for less than \$100.

Career education materials are available commercially for all grade levels. On the basis of judgments on applicability to specific grade levels, there are more than 250 units appropriate for use in kindergartens and nearly 1,750 for grade 12.

More than 1,000 units were determined appropriate for each of the following instructional strategies:

Discussion . . . . .	1,709
Self-instruction. . . . .	1,357
Group or panel discussions. . .	1,237
Individual or group counseling. . . . .	1,018

Only one unit was judged appropriate for micro-teaching and psychodrama.

Assessors were given the opportunity to identify each unit by one or more of 21 descriptors. A total of 3,661 responses were given for the 2,016 positively assessed units. The descriptor "provisions for individualized, small group or large group instruction" was used 649 times. "Suggested community relations and community agency support programs, which may include parent education" was determined applicable to only two units. Other descriptors frequently used included: teaching suggestions - 506, suggested resources - 454, bibliography - 374 and guidance materials - 546.

Judgments were made regarding the degree of appropriateness (high, average, low) of each unit to the CCEM matrix by grade level and element. Each document could be judged applicable to a maximum of three elements and to as many grade levels as appropriate. General findings are as follows:

The frequency of applicability to grades K-14 in descending order were:

- Career Awareness
- Attitudes and Appreciations
- Educational Awareness
- Economic Awareness
- Beginning Competency
- Employability Skills
- Decisionmaking

Most units classified as applicable to self-awareness are for grades 9-12. Of these, approximately 50 percent were judged average, 25 percent high and 25 percent low

- . Educational awareness units are most applicable to grades 7-12. From 15 to 20 percent were judged high
- . Significant numbers of career awareness units are available for all grades (at least 195). About 60 percent of the total judgments indicated average applicability. However, more than 50 percent of units for grades 4, 5 and 6 were judged low
- . At least eight economic awareness units were judged appropriate for grades K-12. The majority of judgments of appropriateness for all grades was that materials are average. However, nearly 50 percent of the units for grades 5 through 9 were judged to be low
- . Only 136 decisionmaking units were judged applicable. Most of these units were judged appropriate for grades 11 and 12 and judged as having average applicability. Of the 136, only 21 were determined appropriate for grades 1 through 6. However, approximately 50 percent of those were judged high
- . Most judgments of applicability for beginning competency were for grades 10 - 14. More than 50 percent of the judgments were that units were of average applicability. Materials were judged applicable for grades 4, 5 and 6 and most of them were classified as having low applicability. None were assessed as having high applicability for grades 1 through 9
- . Units determined appropriate for employability skills were judged most suitable above grade 9. Only five judgments of appropriateness were made for lower than grade 7
- . A large number of materials were judged applicable to the attitudes and appreciations element. Although the highest frequency was for grades 6-12, at least 100 units were indicated for each grade level. However, the percent judged high is significantly lower than for other elements where high frequency was indicated.

Judgments on the appropriateness of units to target areas by elements resulted in most units being classified as appropriate for curriculum, career information, career preparation and guidance. Only 41 positive judgments were made for the other nine target areas. The element most frequently indicated was career awareness, followed by attitudes and appreciations. Materials determined appropriate for career awareness also received the highest frequency of judgments of high applicability.

These and other findings resulting from this project indicate that great effort has been made by commercial suppliers to provide career education materials. However, on the basis of CCEM criteria, comparatively few materials were judged highly appropriate for a number of elements, target areas and grade levels (i.e., self awareness materials below grade 9; educational awareness below grade 6; career awareness for grades 4, 5 and 6; economic awareness; decisionmaking; beginning competency; employability skills; and attitudes and appreciations at all grade levels). This is confirmed by judgments of over 400 suitability to CCEM needs for materials. 74 percent of materials were rated low for "innovativeness, substantive;" nearly 83 percent rated low for "innovativeness, procedural;" and approximately 68 percent rated low for participant involvement.

### RECOMMENDATIONS

CCEM has significant opportunities to aid users of career education materials in identifying available materials and their sources. In addition, CCEM can assist commercial suppliers by maintaining an active, accurate inventory of this information. This can be accomplished without infringing on the prerogatives of individual school officials or teachers or the proprietary interests of commercial businesses.

If appropriate, CCEM can also be of major assistance to commercial suppliers of career education materials by conducting seminars to help them better understand the specific needs of the consumers. Many suppliers are attempting to be responsive by merely changing titles and/or inserting chapters in traditional materials. Most of these materials only minimally meet CCEM-I objectives. In part, this has been done because of the time required to develop new materials. However, several suppliers are unclear about the definition, theory and desired nature, scope and use of career education materials.

Specific recommendations are as follows:

1. Place the results of the project(s) in the ERIC system.
2. Establish and make available necessary resources for continuing the process of identifying, procuring, assessing, abstracting and indexing career education materials.
3. Place high emphasis on screening materials through careful review of catalogs to determine their probable appropriateness before issuing Material Procurement Requests. This will substantially reduce the resource and time requirements associated with each positively assessed unit.
4. Adopt and implement systems used in this project and make modifications and refinements deemed necessary to keep them efficient and operable at the least required cost.
5. Maintain and expand relationships with suppliers as appropriate. This requires prompt and responsive handling.
6. Do not change the CCEM matrixes or definitions for at least one year. Although refinements might improve the structure, they can be confusing to both consumers and suppliers.

7. Distribute detailed findings of this project to LEA's as soon as possible.
8. Begin a formal plan of action to convey CCEM's concept of career education and provide specific direction in terms of required types of commercially produced materials.

In summary, CCEM - - in conjunction with other educational agencies, institutions, organizations and commercial suppliers - - has a unique opportunity to assume leadership in improving the nature, scope and use of educational materials. Much of its success in doing so will depend on taking immediate advantage of the comprehensive data assembled in this project and its earlier companion study of the availability of non-commercial material.
