ABSTRACT

The Georgia State Department of Education administers criterion-referenced tests to all fourth-, eighth-, and tenth-grade students enrolled in public schools throughout Georgia. The testing program was initiated in the spring of 1976 with the administration of criterion-referenced tests in reading, mathematics, and career development to students in grades 4 and 8. The program was extended to include reading and mathematics tests for tenth-grade students in 1978. The tests administered in 1981 to tenth-grade students were developed in response to revised statewide graduation requirements. The new tests, referred to as the Basic Skills Tests, measure competency in reading and mathematics. An additional area of problem solving is measured as a subskill of both reading and mathematics. The tests were first administered in the fall of 1981, after which the State Board of Education established the minimum passing score. Beginning with the tenth-grade class of 1982, all students must pass the test in order to receive a high school diploma. This report presents the results of the testing programs at the three grade levels during the 1982-83 school year. In addition to the results for Atlanta students, results also are presented for students throughout Georgia. (PN)

INTRODUCTION

The Georgia State Department of Education administers criterion-referenced tests to all fourth-, eighth-, and tenth-grade students enrolled in public schools throughout Georgia. The testing program was initiated in the spring of 1976 with the administration of criterion-referenced tests in reading, mathematics, and career development to students in grades 4 and 8. The program was extended to include reading and mathematics tests for tenth-grade students in 1978.

Several changes have occurred since the program was originally implemented. A new form of the grade 8 reading and mathematics tests was administered in the spring of 1980. In 1981, both grade 4 and grade 10 tests were revised. In the spring of 1983, a third generation of the tests for grade 8 was unveiled and used statewide. This newest edition of the tests also included a revision of the objectives in both reading and mathematics, resulting in dropping a few objectives, adding a few, and combining objectives to reduce the total number of them.

The content covered by the revised fourth- and eighth-grade tests remained unchanged as well as the number of objectives. The relative emphasis given to certain objectives and the criterion levels for determining mastery of the objectives were changed, however, in the 1981 version of these tests. The revisions were made to reflect the changes in emphases and levels of performance that were occurring in classrooms throughout Georgia.

The tests administered in 1981 to tenth-grade students were developed in response to the State School Board Policy IHF, which pertains to revised statewide graduation requirements. The new tests, referred to as the Basic Skills Tests, measure competency in reading and mathematics. An additional area of problem solving is measured as a sub-skill of both reading and mathematics. The tests were first administered in the fall of 1981, after which the State Board of Education established the minimum passing score. Beginning with the tenth-grade class of 1982, all students must pass the test in order to receive a high school diploma.

This report presents the results of the testing programs at the three grade levels during the 1982-83 school year. In addition to the results for Atlanta students, results also are presented for students throughout Georgia, and in some instances, for students in the Metropolitan Educational Planning District (Metro EPD).¹

¹The Metro EPD includes Atlanta City, Cobb County, Fulton County, Gwinnett County, DeKalb County, Douglas County, Clayton County, Rockdale County, Marietta City, and Decatur City.

FOURTH GRADE RESULTS

Performance by Objective

The 20 reading and 20 mathematics objectives measured by the Grade 4 Georgia Criterion-Referenced Tests (GCRT) are presented in Tables 1 and 2.

The percentages of students in Atlanta and throughout Georgia who demonstrated mastery of each reading objective and each mathematics objective are given in Tables 3 and 4. The difference in percentage of students mastering each objective from 1982 to 1983 is provided as well as the overall achievement by objective from 1981 through 1983.

Reading. From Table 3 it can be noted that gains were made in Atlanta on 13 of the 20 reading objectives in 1983. On 5 of the objectives, there was no gain; and on each of the remaining 2 objectives, there was a decline of 1 percentage point. The gains ranged from 1 percentage point on 5 of the objectives to 10 percentage points on Objective 19 (reads and comprehends a simple passage and draws conclusions, recognizes cause and effect relationships and/or the sequence of events). On objective 20, there was a gain of 3 percentage points, and the remaining gains were each 2 percentage points.

It can also be seen in Table 3 that there were gains in achievement on all 20 objectives in reading for fourth graders statewide. The State's gains in achievement were greater than those in Atlanta on 17 of the 20 objectives. On 2 of the objectives, Atlanta's gains were the same as the State's, and on only 1 objective (Objective 19) was Atlanta's gain greater than that of the State. The overall achievement gain in Atlanta was 1.40 percentage points compared to 3.75 percentage points for the State. This was a reversal from last year when Atlanta's overall gain in reading exceeded that of the State. Atlanta's gain was smaller this year compared to last year, whereas the State's gain was greater compared to last year.

Mathematics. The percentages presented in Table 4 indicate that gains in achievement were made by Atlanta students on 5 the 20 mathematics objectives. On 3 of the objectives, there was no gain; and on 12 of the objectives, there was a decline in achievement. The declines were relatively small—1 percentage point on 7 of the objectives, 2 percentage points on 4 of the remaining objectives, and 4 percentage points on 1 objective. The gains were also small—1 percentage point on 4 objectives, and 2 percentage points on 1 objective.

As can be seen in Table 4, there were overall gains in achievement throughout the State on all of the 20 objectives in mathematics. The statewide gains were greater than those in Atlanta on 19 of the 20 objectives. On one objective, the gains were equal. Overall, there was an average decline of 0.65 in Atlanta on the 20 objectives compared to an overall gain of 3.50 throughout the State. As in reading, this was a reversal from last year when Atlanta's overall gain in mathematics exceeded that of the State. The State's gain this year was more than three times greater than last year.

Overall, the percentage of students mastering the reading objectives was greater than the percentage mastering the mathematics objectives both in Atlanta and throughout Georgia. For both groups, the gains were greater in reading than in mathematics, a reversal from last year.

Rank Order of Objectives

Tables 5 and 6 present the rank orders of the reading and mathematics objectives, respectively. The objectives are listed in rank order according to the percentage of students in Atlanta who mastered each objective during the 1983 testing program. For each objective, the percentage of students throughout Georgia mastering each objective also is given as well as the difference in percentage of mastery between Atlanta and Georgia.

Reading. The results of a Spearman rank-order correlation ($r_s = .93$, $p < .001$) indicate that the rank order of the objectives was similar for students in Atlanta and students throughout Georgia. The rank order of the objectives for Atlanta students also was correlated significantly with the difference in mastery levels for Atlanta and Georgia students ($r_s = .82$, $p < .001$). That is, the level of mastery for Atlanta students was closer to the level of mastery for Georgia students on the highest ranking (easiest) objectives. Conversely, the greatest discrepancy in mastery levels for Atlanta and Georgia students occurred on the lowest ranking (most difficult) objectives.

The highest level of mastery for students in Atlanta and throughout Georgia was on Objective 2 (identifies sounds of beginning consonants or two-letter combinations of consonants). More than 90 percent of the students in both groups demonstrated mastery of that objective.

The lowest level of mastery for both groups occurred on Objective 13 (reads short selections and identifies which statements are facts, and which express the writer's opinions). Only 43 percent of the students in Atlanta demonstrated mastery of the objective.

In Atlanta, mastery levels for the reading objectives ranged from 43 to 91 percent. The corresponding range for students throughout Georgia was 61 to 97 percent.

Mathematics. The rank orders of the mathematics objectives for students in Atlanta and throughout Georgia, respectively, were correlated significantly ($r_s = .95, p < .001$). That is, the objectives with the highest mastery level for Atlanta students tended to be the objectives with the highest mastery level for students throughout Georgia as well. The correlation of the rank order of objectives for Atlanta students with the difference between mastery level in Atlanta and Georgia also was significant ($r_s = .76, p < .001$). In other words, the difference in the level of mastery for Atlanta and Georgia students tended to be less for the highest ranking (easiest) objectives and greater for the lowest ranking (most difficult) objectives.

In mathematics, the level of mastery for students in Atlanta ranged from 41 to 81 percent. The corresponding range for students throughout Georgia was 63 to 93 percent.

Students in Atlanta and throughout Georgia demonstrated the highest level of mastery in mathematics on Objective 1 (shows that the number of objects in one set is the same as or is not the same as the number in another set. . .). In Atlanta, 81 percent of the students mastered that objective compared to 93 percent of the students throughout Georgia. Atlanta students performed equally as well on Objective 11 (makes diagrams, tables, graphs, or other written records of relations. . .), again with 81 percent of the students demonstrating mastery. This objective was ranked record for students throughout the State.

The lowest level of mastery for both groups occurred on Objective 14 (states the relation between points or between geometric figures, such as points inside or outside a closed curve or a line parallel to another line). Only 41 percent of the students in Atlanta demonstrated mastery of that objective.

Skill Areas

The 20 reading and the 20 mathematics objectives, respectively, have been grouped into six skill areas. Which objectives are grouped into which skill area is shown in the column headings in Tables 9 and 10. The performance by skill area is shown in Table 7.

From Table 7, it can be seen that the highest level of performance for Atlanta and Georgia in 1981, 1982, and 1983 on the reading skills occurred in relation to Vocabulary. Throughout Georgia in 1983, 94 percent of the fourth-grade students demonstrated mastery of the average objective in the Vocabulary skill area compared to 84 percent of the fourth graders in Atlanta.

The lowest level of performance for Atlanta and Georgia occurred on Study Skills. In 1983, 74 percent of the students statewide demonstrated mastery of that skill area compared to 55 percent of the students in Atlanta.

In mathematics, the highest level of performance for all three years was on Relations and Functions for Atlanta and the State as a whole. Statewide, slightly more than 88 percent of the students demonstrated mastery of that skill area in 1983 compared to just over 78 percent of Atlanta students.

The lowest level of performance was in the area of Measurement for Atlanta students. Only a little more than one-half of Atlanta students demonstrated mastery of that skill area compared to 75 percent of the students throughout Georgia.

Scale Scores

The mean scale scores presented in Table 8 reflect the same trends reported in the previous sections. Reading scores were higher than mathematics scores for students in Atlanta, and throughout Georgia. Atlanta scores were lower than Georgia scores in all areas. Further, students statewide made gains from 1982 to 1983 in all areas, whereas Atlanta students showed losses in two mathematics areas, with no gain in the third mathematics area. Atlanta students showed an appreciable gain in inferential comprehension, as did students throughout the State.

Other Comparisons

Tables 9 through 12 are reprints of summary reports provided by the State Department of Education. The percentages of students by school achieving each of the reading and mathematics objectives are presented in Tables 9 and 10, respectively. The relative performances of Atlanta, Metro EPD, and Georgia students on the reading objectives are presented in Table 11. The corresponding comparisons for the mathematics objectives are given as Table 12.

TABLE 1
 GEORGIA CRITERION-REFERENCED TESTS (GCRT)
 GRADE 4 READING OBJECTIVES

No.	Objective
1:	Distinguishes between sentence fragments and complete sentences.
2:	Identifies sounds of beginning consonants or two-letter combinations of consonants.
3:	Identifies the sounds of long vowels and of short vowels in one- and two-syllable words.
4:	Identifies number of syllables in a word and divides words into syllables.
5:	Identifies sounds that vowels have when they appear before "L," "W," and "R," and distinguishes between the two different sounds of "C" and "G."
6:	Selects the appropriate words such as "here," "under," "beside," "around," "above" to indicate position or location.
7:	Identifies contractions and abbreviations and the words they represent.
8:	Selects appropriate verbs or adjectives which complete sentences.
9:	Selects appropriate meaning for the following word endings: "S," "ES," "IES," "ING," "ED," "LY," "ER," and "EST."
10:	Recognizes simple vocabulary words instantly when seen, without having to analyze them in order to pronounce them.
11:	Matches symbols and pronouns to the things, ideas, or persons that they represent.
12:	Reads short selections and identifies the main idea and supporting details.
13:	Reads short selections and identifies which statements are facts, and which express the writer's opinions.
14:	Arranges groups of objects or ideas into simple categories.
15:	Arranges words in order, from the most general to the most specific.
16:	Reads a simple selection, identifies "heroes," "villains," other main characters, and the setting.
17:	Distinguishes between the obvious (literal) and implied (figural) meanings in simple statements.
18:	Alphabetizes words according to the first two letters, and uses dictionaries and tables of contents to locate specific information.
19:	Reads and comprehends a simple passage and draws conclusions, recognizes cause and effect relationships and/or the sequence of events.
20:	Recognizes the correct use of basic punctuation marks and recognizes how punctuation can change the meaning of a sentence.

TABLE 2
 GEORGIA CRITERION-REFERENCED TESTS (GCRT)
 GRADE 4 MATHEMATICS OBJECTIVES

No.	Objective
1:	Shows that the number of objects in one set is the same as or is not the same as the number in another set; counts by ones, twos, threes, fives, tens, hundreds.
2:	Expresses names of numbers, including whole numbers, fractions and decimal fractions, in various ways.
3:	Reads and writes names of numbers through one million.
4:	Tells which arithmetic operation is appropriate to a given problem situation.
5:	Recalls any of the addition and subtraction facts, and any of the multiplication and division facts through products to 50.
6:	Applies and recognizes use of the properties of numbers and properties of operations without emphasis on the use of words.
7:	Adds and subtracts with numerals up to four digits (with regrouping).
8:	Multiplies a three-digit number, and divides a three-digit number by a one-digit number (with or without remainder).
9:	States the relations of a given set of elements; states pairs of elements for a given relation.
10:	Sorts and classifies objects by similarities or differences.
11:	Makes diagrams, tables, graphs, or other written records of relations (ordered pairs).
12:	Names and identifies standard geometric shapes.
13:	Selects from given geometric shapes a shape which matches one that has been turned around, flipped over, moved sideways, stretched or shrunk.
14:	States the relation between points or between geometric figures, such as points inside and outside a closed curve or a line parallel to another line.
15:	Selects a unit of measure appropriate to a situation in which time, weight, length, area, volume, temperature, or money is measured.
16:	Finds to the nearest number of units a measurement of time, weight, length, area, volume, temperature, or money.
17:	Makes estimates of measurements and makes comparisons.
18:	Collects information and makes tables, charts, and graphs of data gathered.
19:	Reads tables, charts, and graphs of information and draws inferences from the information.
20:	Specifies outcomes that are more likely, less likely, equally likely, or not likely to occur, from a given set of possible outcomes.

7:	Adds and subtracts with numerals up to four digits (with regrouping).	65	84	-19
19:	Reads tables, charts, and graphs of information and draws inferences from the information.	65	84	-19
17:	Makes estimates of measurements and makes comparisons.	64	82	-18
6:	Applies and recognizes use of the properties of numbers and properties of operations without emphasis on the use of words.	61	71	-10
12:	Names and identifies standard geometric shapes.	61	78	-17
3:	Reads and writes names of numbers through one million.	57	73	-16
16:	Finds to the nearest number of units a measurement of time, weight, length, area, volume, temperature, or money.	56	74	-22
4:	Tells which arithmetic operation is appropriate to a given problem situation.	52	72	-20
8:	Multiplies a three-digit number, and divides a three-digit number by a one-digit number (with or without remainder).	51	67	-16
15:	Selects a unit of measure appropriate to a situation in which time, weight, length, area, volume, temperature, or money is measured.	46	69	-23
14:	States the relation between points or between geometric figures, such as points inside and outside a closed curve or a line parallel to another line.	41	63	-22

TABLE 7
PERFORMANCE BY SKILL AREA
GRADE 4 READING AND MATHEMATICS, 1981-83

A. Percentage of Students Achieving Objectives in Each Reading Skill Area:

Skill Area	Atlanta				Georgia			
	1981	1982	1983	1983-82	1981	1982	1983	1983-82

EIGHTH GRADE RESULTS

Performance by Objective

The 11 reading and the 12 mathematics objectives measured by the 1983 Grade 8 Georgia Criterion-Referenced Tests (GCRT) are presented in Tables 13 and 14, respectively. Both the objectives and the tests measuring their achievement were revised for this year. As can be seen, there has been considerable consolidation of the objectives in both reading and mathematics. In reading, objectives dealing specifically with sounds and syllabication have dropped out of the Grade 8 GCRT, whereas objectives concerned with recognizing propaganda techniques and making predictions and comparisons have been added. It is clear that the primary emphasis is on skills involved in comprehension and problem solving. In mathematics, although no skills have been dropped completely, there has been much in the way of combining objectives and refocusing emphasis, particularly in respect to increased attention to problem solving.

Inasmuch as the GCRT for Grade 8 is new this year, comparison of the results with those of previous years is limited to a consideration of scale scores, which are based on a common scale that equates different forms of the tests.

Rank Order of Objectives

The rank orderings of the reading and mathematics objectives are provided in Tables 15 and 16. The objectives are listed in rank order according to the percentage of students in Atlanta who mastered each objective during the 1983 testing program. The percentage of students throughout Georgia who mastered each objective also is shown, in addition to the difference between the level of mastery for Atlanta and Georgia students.

Reading. The Spearman rank-order correlation calculated on the respective rank ordering of the objectives for Atlanta and Georgia students revealed a significant correspondence ($r_s = .92, p < .001$). In other words, the objectives which were most difficult for Atlanta students also tended to be the most difficult for students throughout Georgia; conversely, the objectives which were easiest for Atlanta students tended to be the easiest for students throughout Georgia.

A rank-order correlation was calculated also on the rank order of objectives for Atlanta students with the difference in mastery level for Atlanta and Georgia students. It was found that the rank order of the objectives for Atlanta students was correlated significantly with the difference in mastery levels between Atlanta and Georgia students.

($r_s = .65, p < .02$). That is, the level of mastery for Atlanta students was closer to the level of mastery for Georgia students on the highest ranking or easiest objectives. Conversely, the greatest discrepancy in mastery levels for Atlanta and Georgia students occurred on the lowest ranking or most difficult objectives.

Students in Atlanta and throughout Georgia showed the greatest level of achievement on Objective 6 (interprets figurative language). In Atlanta, 74 percent of the students demonstrated mastery of the objective compared to 88 percent statewide. The lowest level of achievement for Atlanta students occurred on Objective 4 (recognizes implicitly stated main ideas, details, sequences of events, and cause and effect relationships), with 31 percent of the students demonstrating mastery. This objective is ranked eighth out of the 11 objectives for the eighth graders statewide, with 54 percent of the students showing mastery. It is of interest that the second lowest objective for both Atlanta students and students statewide is Number 2 (recognizes explicitly stated main ideas, details, sequences of events, and cause and effect relationships), with 32 percent of Atlanta students demonstrating mastery, compared to 52 percent for the State. These two objectives together constitute the heart of the comprehension objectives, the latter having to do with literal comprehension and the former having to do with inferential comprehension.

Mastery levels in reading for students in Atlanta ranged from 74 to 31 percent. Throughout Georgia the range extended from 88 to 50 percent.

Mathematics. The results of a Spearman rank-order correlation ($r_s = .95, p < .001$) indicate that the rank order of the mathematics objectives was similar for students in Atlanta and throughout Georgia. The rank order of the objectives for Atlanta students was correlated significantly also with the difference in mastery levels for Atlanta and Georgia students ($r_s = .91, p < .001$). That is, the level of mastery for Atlanta students was closer to the level of mastery for Georgia students on the highest ranking (easiest) objectives. Conversely, the greatest discrepancy in mastery levels for Atlanta and Georgia students occurred on the lowest ranking (most difficult) objectives.

In mathematics, Objective 5 (determines probabilities) reflected the highest mastery level for students in Atlanta and for students throughout Georgia. For Atlanta students, however, Objective 10 (organizes data) was tied with Objective 5 in mastery level. For students statewide, Objective 10 was one percentage point below Objective 5. The lowest level of mastery for both groups occurred on Objective 4 (identifies relations and properties of sets of points).

Mastery levels in mathematics ranged from 70 to 38 percent for Atlanta compared to a range that extended from 86 to 63 percent for students throughout Georgia.

Scale Scores

The 20 reading and the 20 mathematics objectives, respectively, are grouped into three general skill areas. The 1981, 1982, and 1983 performances by skill area for Atlanta and Georgia are presented in Table 17. The groupings of objectives into skill areas are shown as column headings in Tables 18 and 19. Although it was not possible to compare the 1983 eighth-grade GCRT results with the 1982 results in terms of percentage of students showing mastery of each objective (as explained earlier), it was possible to show comparisons by skill area because the use of scale scores in this connection made the 1983 results comparable to those from earlier years. The area of Problem Solving in reading shows N/A ("not applicable") for 1981 and 1982 for both Atlanta and the State because this particular area was reported for the first time in 1983.

The highest level of reading achievement in 1983 for both groups was in Literal Comprehension. This was also the area in which both groups made the greatest gains from 1982 to 1983. Atlanta students moved from a scale score of 190 to 197, and students throughout the State moved from 201 to 207. In most of the skill areas, eighth graders statewide scored higher than Atlanta's eighth graders in all three years.

In mathematics, both Atlanta students and students throughout the state showed a consistency of performance across skill areas in 1983, with the State 10 scale points higher than Atlanta in each area. Both Atlanta and the State showed gains in all areas from 1982 to 1983. As in reading, students throughout the state scored higher in mathematics than did students in Atlanta in all skill areas for all three years.

Other Comparisons

Reprints of the summary reports distributed by the State Department of Education are shown as Tables 18 through 21. The percentages of students at each school achieving each of the reading and mathematics objectives are presented in Tables 18 and 19, respectively. The relative performances of students in Atlanta, Metro EPD, and Georgia on the reading objectives are presented in Table 20. The corresponding comparisons for the mathematics objectives are given as Table 21.

TABLE 13
GEORGIA CRITERION-REFERENCED TESTS (GCRT)
GRADE 8 READING OBJECTIVES

No.	Objective
1	Distinguishes between fact and opinion.
2	Recognizes explicitly stated main ideas, details, sequences of events, and cause and effect relationships.
3	Interprets instructions.
4	Recognizes implicitly stated main ideas, details, sequences of events, and cause and effect relationships.
5	Interprets word meanings and patterns of language.
6	Interprets figurative language.
7	Recognizes propaganda techniques.
8	Uses reference sources.
9	Makes generalizations and draws conclusions.
10	Makes predictions and comparisons.
11	Recognizes the relevance of data.

NOTE: For a complete statement of each of the above objectives, add the phrase "in the context of academic, everyday, or employment materials."

REPORT ON THE FIRST YEAR'S ADMINISTRATION
OF THE BASIC SKILLS TESTS
1982-83

The Georgia Basic Skills Tests (BST) was developed by the Georgia Department of Education to certify minimal competencies of high school students in the areas of reading and mathematics. Beginning with the class of students who entered the ninth grade for the first time in the fall of 1981, all high school students must pass the reading and mathematics subtests in order to qualify for a high school diploma.

Students who are covered by the BST requirement were tenth graders during the 1982-83 school year and took the test for the first time in October 1982. The students who did not pass one or both subtests were scheduled for a retest in March 1983.

Results of the fall administration and the spring administration have been presented in previous reports. The purpose of this report is to provide an analysis that combines the results of the fall and spring test administrations.

Participation: Tenth Graders at Year End

The number of tenth graders enrolled in the Atlanta Public Schools at the end of the 1982-83 school year is presented according to three categories: regular, special education, and bilingual (limited English proficiency). Excluded in the total are students who attend alternative schools, and students who are assigned to self-contained special education classes. They are excluded because there is no grade code established for them. The total across all three categories is presented as well. The percentage which appears for each of the three categories is the percentage of the total tenth-grade enrollment.

Not Covered by Policy. The total number of tenth graders at the end of the school year can be subdivided into two categories: those who were covered by the BST requirement and those who were not. For the first year's administration, the BST requirement affects the students who entered ninth grade for the first time in the 1981-82 school year. Thus, the tenth-grade repeaters in 1982-83 and those who entered the ninth grade in the 1980-81 school year were not covered by the BST requirement. These figures also are presented according to the three categories specified previously.

Covered by Policy. The numbers and percentages of the 1982-83 tenth-grade students who were ninth graders for the first time in 1981-82 are given in this section. It should be noted that while special education and limited English proficiency (bilingual) students are required to pass the test in order to receive a regular high school diploma,

these students are not required to take the test if the student, parent/guardian, and teacher agree that it is not in the student's best interest to participate in the testing program. A signed agreement is required for these cases.

In order to make an accurate assessment of the extent to which students were tested who were covered by the policy and required to be tested, one should examine the data presented in the table for the section labeled "Regular Education Students — Covered by Policy." The assessment of the extent to which special education and bilingual students were appropriately tested can be conducted only by the examination of individual permanent record folders which are kept at the schools. That is, this type of information is not maintained on computer files.

It can be seen from Table 22 that 3,981 of the 4,091 tenth-grade, regular education students covered by the policy were tested during the year in an Atlanta Public Schools (APS) high school. The 110 regular students for whom no test record was on the APS file include those who enrolled after the fall test administration from a school in another Georgia system or who enrolled after the spring test administration began. If students were tested in another Georgia system, the records will be found in the students' permanent record folders which are maintained at the school. This information does not appear on computer file, since the students were not tested as part of the APS testing program. Students who were not enrolled from a Georgia public school until after the spring test administration began will be tested for the first time in the fall of 1983. In at least one instance, an APS student's test record was not on the computer file although the student passed the test and was included on the list provided the school in the fall. Therefore, in order to verify the count of the remaining students for whom no test record exists on the computer file, it will be necessary to check the school records for each of these students when school reopens.

Finally, there is the category for students covered by the policy and for whom there are test records. These figures provide the bases on which the percentages in the next two sections (Reading and Mathematics) are computed.

Classification of Students by Test Results

Students who took the BST at least once during the 1982-83 school year in an APS high school were classified into two categories: those who had passed by the end of the year and those who had not passed by the end of the year. Within these two classifications, students were further subdivided into a group of those who passed the first time they took the test and those who passed the second time they took it (i.e., on the retest).

Results in Reading

Passed Test by Year's End. Of the 3,981 regular education students who took the BST, 3,781 (or 95%) passed the reading subtest by the end of the year. In the special education category, 82 of the 218 students (37.6%) passed by the end of the year, and by year's end, 22 of the 27 bilingual students (81.5%) passed. Combined across all categories, 91.9 percent of the students who took the Reading subtest passed by year's end.

Not Passed by Year's End. The 341 (8.1%) students who had not passed the Reading subtest by year's end include 200 (5.0%) of the 3,981 regular students, 136 (62.4%) of the 218 special education students, and 5 (18.5%) of the 27 bilingual students.

Results in Mathematics

Passed Test by Year's End. On the mathematics subtest, 3,459 regular education students who took the BST had passed by year's end. This figure represents 86.9 percent. Of the special education students, 29.4 percent had passed by the end of the year, and 88.9 percent of the bilingual students had passed by year's end.

Not Passed by Year's End. The results for this category indicate that 522 students or 13.1 percent of the regular education students covered by the policy and who took the Mathematics portion of the BST, 154 or 70.6 percent of the special education students, and 3 or 11.1 percent of the bilingual students had not passed by the end of the year. A total of 679 students or 16.1 percent had not passed the mathematics subtest by year's end.
