ABSTRACT

This framework is designed to assist early care and education providers in planning and implementing early learning opportunities that will help prepare young children in Washington State for later success in meeting the essential academic learning requirements in reading, writing, and communication. The framework identifies characteristics of children from birth through age 5 in the areas of verbal communication, reading, and writing; it is not intended for use in screening, program placement, or school readiness determinations. The framework is organized into four sections. The introductory section presents the assumptions reflected in the framework and highlights the importance of building a strong foundation to support the development of literacy skills and linking that foundation to the essential academic learning requirements for kindergarten through third grade. Sections 2 through 4 focus on reading, writing, and communication, respectively. Each of these sections provides an overview of the contribution of the skills to future school success, details a continuum of characteristic skills that children typically achieve during infancy (birth to 18 months), toddlerhood (12 to 36 months), and the preschool years (30 months to 5 years), links these characteristics to essential K-3 academic learning requirements, and notes the type of assessment tool to be used such as observation or a work sample. Acknowledgment

The staff at the Office of Superintendent of Public Instruction (OSPI) would like to give special thanks to the members of the Early Childhood Literacy Task Force who have worked diligently for two years to develop these Frameworks. This task force has consisted of a broad base of early childhood stakeholders across the spectrum of birth to 5 years and Grades K-3, who have committed their time, thoughtful consideration, creativity, and hard work toward completion of this project. OSPI would also like to acknowledge additional contributors who provided input and guidance and reviewed initial drafts for revision.

We would like to acknowledge the following people for their contribution to this project:

Greg Abel Sound Options Cheryl Allen

West Valley School District

Brad Begalka

Introduction

This document is designed to assist early care and education providers in planning and implementing early learning opportunities that will help prepare young children for later success in meeting the essential academic learning requirements in reading, writing, and communication.

These learning frameworks are not intended for use as a group or individual screening tool to place children in programs or to make determinations of readiness for school. They are not intended to be used as an assessment checklist nor as an evaluation tool to make high-stakes decisions about children's program placements.

The frameworks are intended to guide you as you develop curriculum and activities for the children in your care. The focus is on being intentional as you provide early experiences—in school, the community, or at home—that lay the foundation for success as children encounter our state's public school curriculum.

Assumptions reflected in this document

- Literacy begins at birth.
- Children progress at different rates and individual children may show more or less progress at certain times.
- Learning is dependent on one skill being the basis for another skill or a number of skills at the next level.
- Careful observation of young children is critical to determine whether or not a child has a particular skill. Very young children perform skills within the context of daily events or activities which must be carefully observed for the purposes of assessment.
- Literacy is a critical tool used for thought and communication and the transmission of language and culture across generations.

Purpose

This document has been created in an effort to link the life experiences of early childhood with eventual success in school. For our children to be successful readers and writers, they must enter school with a rich experiential base. These experiences occur within the family and early care and education programs. By calling attention to the foundation that supports the development of literacy skills and linking it to the essential academic learning requirements for K–3, we can all work together to benefit our children, creating a continuum of teaching, learning, and family support for children and their families.

For students to be successful at the fourth grade level, there are important benchmarks children need to reach during infancy, toddlerhood, and preschool. The purpose of this document has been to identify characteristics of young children in the areas of verbal communication, reading, and writing which is referred to as "suggested characteristics." These suggested characteristics can mark early signs of success on the child's long educational journey. As adults who can make a difference in young children's lives, we can encourage and celebrate these individual successes.

ii

Communication

Researchers agree that oral language provides the cornerstone of written language. Speaking, listening, reading, and writing are all aspects of literacy and develop in an interdependent manner, each informing and transforming the other (Strickland, 1990). Long before children are able to match print with sound, they are using verbal language to reason, reflect, imagine, respond, analyze, observe, compare, infer, empathize, share experiences and ideas, and solve problems. Children benefit from one-on-one conversations with adults that provide them with new information, ideas, and rich vocabulary as part of their everyday experiences. Listening to stories and being encouraged to tell their own stories expands oral language development.

Reading

Children enjoy reading and being read to as a daily part of their life. Children learn to read from within. When we study the homes of children who are reading before they start school, we find children competent in speaking, listening, and writing. These skills emerge well before the child enters kindergarten, emerging naturally from the rich literacy experiences of everyday life. Important aspects of reading include:

- Phonemic and phonological awareness (awareness of the separate sounds in words as spoken and written) are encouraged through exploring rhymes in games, poetry and songs; enjoying tongue twisters and other forms of language play; and singing songs with rhyme and alliteration. Children benefit from encouragement to use developmental spelling and from drawing their attention to letter/sound patterns in familiar words.
- Book and print awareness (the awareness that print makes sense) is enhanced by creating an
 environment rich in print of all kinds and with many opportunities for using and seeing print
 used in functional and creative ways. Adults should provide print-rich environments,
 including books, writing materials and toys with print; point out print in the environment;
 and label important things in a child's universe.
- Functions of print are understood and become meaningful to children through exposure to a wide variety of print. They learn that print gives us information, can entertain us, amuse us, and bring us comfort.
- Print concepts are the most basic conventions that govern written language. This involves the knowledge of book handling, front to back, and the knowledge that English text runs from left to right.
- Letter and word recognition begins for many children with recognition of their name in print and the letters of their name. Many children then delight in finding "their letters" in print in the environment.
- Knowledge of narrative involves becoming familiar with the elements of character, dialogue, and sequence of events in stories.

Writing

Children see adults write and want to make it a part of their life as well. When adults offer to transcribe children's talk into letters, words, and sentences that "read" the same again and again, children naturally become engaged in using writing for their own personal expression. Through experiences with "writing," children learn the difference between writing and drawing. As they become more experienced, their scribbling gets more purposeful and begins to approximate writing. Children benefit from being exposed to many opportunities to draw, paint, scribble, and write with a variety of mediums for a variety of purposes.

Since students progress at different rates on different skills, the framework is organized by levels. For each level, information is presented in the following sections:

- Suggested characteristics.
- Strategies to guide observation and document evidence of developmental progress.
- Links to essential academic learning requirement (essential learnings or EALRs).

The information included in this document is an attempt to define outcomes for early learning in line with the essential learnings to be achieved by the fourth grade. This first attempt will, of course, require refinement. We know that suggestions for refinement will come from parents, care providers, preschool and elementary teachers, and administrators and colleagues from the field of early childhood education. This dialogue will assist in defining the practice of early childhood education for all of our children.

Reading

We know that reading, writing, and communication skills, along with understanding of concepts from content areas, form the basis for literacy. The ability to read—to use one's understanding of language/symbol relationships and understanding of the world to make meaning from text—is an important skill, basic to successful learning in school, in careers, and in life.

The suggested characteristics for reading for infants, toddlers, and preschoolers are coordinated with Washington's essential academic learning requirements. They look at the age span from birth to 5 years and provide a continuum (or developmental progression) of characteristic skills that children typically achieve within each age range.

These suggested characteristics are not intended for use as a group or individual screening to place children in programs or to make determinations of readiness for school. They are intended to guide you as you develop curriculum and activities for the children in your care. The focus is on being intentional as you provide early experiences—in school, child care, or at home—that lay the foundation for success as children encounter our state's public school curriculum.

Framework for Achieving the Essential Academic Learning Requirements in

Reading Birth to Age 5

Suggested characteristics to be worked toward by age 5.

	Infant (birth to approximately 18 months)	Toddler (12 months to 3 years of age)	Preschool (30 months to 5 years of age)
1.	The student understands and uses different skills and strategies to read. 1.1 use word recognition and word meaning skills to read and comprehend text	erent skills and strategies to read. ning skills to read and comprehend text

Writing

We know that reading, writing, and communication skills, along with understanding of concepts from content areas, form the basis for literacy. Writing—the ability to express ideas and meaning through the use of symbols to represent language—is a critical skill for success in school, in careers, and in life.

The suggested characteristics for writing for infants, toddlers, and preschoolers are coordinated with Washington's essential academic learning requirements. They look at the age span from birth to 5 years and provide a continuum (or developmental progression) of characteristic skills that children typically achieve within each age range.

These suggested characteristics are not intended for use as a group or individual screening to place children in programs or to make determinations of readiness for school. They are intended to guide you as you develop curriculum and activities for the children in your care. The focus is on being intentional as you provide early experiences—in school, child care, or at home—that lay the foundation for success as children encounter our state's public school curriculum.

Framework for Achieving the Essential Academic Learning Requirements in

Writing Birth to Age 5

Suggested characteristics to be worked toward by age 5.

Preschool (30 months to 5 years of age)		Uses marks and/or random letters to represent	words	 Draws horizontal and vertical lines and crosses and circles 	Realizes picture in book is a symbol for the real	object	 Names and points to familiar objects in pictures and/or books 	Uses language to describe and label drawings/assigns a message to own symbols	Recounts own experiences/can relate a simple	sequence of events with beginning, middle, and end	 Uses drawings to tell/retell a story or relate an experience 	 Knows that writing and drawing are different 	Begins to notice specific print, such as letters of own name	Names some letters	May use one letter to represent a word
Toddler (12 months to 3 years of age)		Makes marks on paper purposefully	Draws horizontal and vertical lines	Uses symbols in play—uses objects to represent other things	Asks adult to write on/label child's picture	Gives simple descriptions of past events	Assigns name/label to items in own drawings	Occasionally distinguishes between writing and drawing	Sings easy songs and fingerplays with repetitive	patterns and words					
Infant (birth to approximately 18 months)	1. 1. The student writes clearly and effectively. 1.1. develop concept and design	Focuses on marks on paper	Repeats motion to make additional marks on paper	Names/labels objects and people Responds to specific sounds and voices by turning	• head	Sits up and crawls independently	•	•	•

Communication

We know that reading, writing, and communication skills, along with understanding of concepts from content areas, form the basis for literacy. Communication is a complex set of skills that enable us to exchange our ideas, thoughts, and feelings with others. Communication may be verbal, may be written, or may be through different symbol methods such as sign language. Communication may also be subtle through touch, facial expressions, and body language.

Learning to communicate well with others is critical for success in school to help teachers understand what we have learned; with family and friends as we communicate to get our needs met; and in careers as we communicate needed information to clients, customers, and co-workers.

The suggested characteristics for communication for infants, toddlers, and preschoolers are coordinated with Washington's essential academic learning requirements. They look at the age span from birth to 5 years and provide a continuum (or developmental progression) of characteristic skills that children typically achieve within each age range. They represent not only the ability to use words to express ideas and feelings but the other skills that enable communication to work—the development of vocabulary, use of appropriate language structures, and the social skills which help true communication to take place between people.

Framework for Achieving the Essential Academic Learning Requirements in

Communication Birth to Age 5

Suggested characteristics to be worked toward by age 5.

	Infant (birth to approximately 18 months)	Toddler (12 months to 3 years of age)	Preschool (30 months to 5 years of age)
	1. The student uses listening and observation skills to gain understanding. $I.I.\ focus\ attention$	skills to gain understanding.	
•	Turns to locate the source of a sound	Looks for an object or person when invited to	Looks toward person while listening to a whole
•	Makes and sustains eye contact in response to	"look"	statement and listens through a peer's statement
	other person's voice	Follows a nonverbal direction (head nod, head	 Responds by looking when directed to look at a
•	Orients to speaker when name is called	shake, point)	specific attribute (i.e., find the <u>red</u> sock, sit in the
•	Pays attention to what another person is looking at or pointing to		<u>big</u> chair)
	1.2 listen and observe to gain and interpret information	yet information	
•	Changes affect in response to another's voice,	Follows a simple direction ("bring me your sock")	Imitates other children's play ideas
	gestures, or facial expression	 Attends to short stories, fingerplays, or other 	Adapts other children's approaches to a problem
•	Responds differentially to environmental sounds	activities with interest	the child is trying to solve
•	Vocalizes or gestures in response to another's		 Takes turn in a group discussion or listens to
	voice		others and responds in a group discussion
•	Vocalizes during turn taking		 Shows understanding of another's feelings with adult support
	1.3 check for understanding by asking questions and paraphrasing	uestions and paraphrasing	
•	Inserts gestures, sounds, or word in conversational turn taking	 Independently locates objects when they are discussed by others 	 Independently asks a question on the topic another child has raised
•	Uses vocal inflection or facial expressions to gain understanding or to verify information	 Uses a question form, facial expression, or inflection to each or verify information 	Independently asks a question on the topic an adult has raised.
		Repeats a word or short phrase to verify or practice new information	 Independently rephrases another's statement
