DESCRIPTORS Abstracts; Annotated Bibliographies; Collective Bargaining; *College Faculty; College Planning; Employment Practices; Higher Education; *Job Layoff; Legal Problems; Needs Assessment; *Personnel Policy; Political Influences; Reduction in Force; *Retrenchment; Standards; *Teacher Dismissal; Teacher Employment

IDENTIFIERS *ERIC

ABSTRACT

A collection of approximately 75 abstracts relating to the issues of faculty reduction and layoff is presented, based on a 1981 computer search of the ERIC database. ERIC abstracts included are most likely to be of value to planners facing the prospect of faculty reduction; they provide a beginning ERIC reference source of background material related to reduction planning. The materials cover the period 1971-1981, and include the following types of publications: research reviews, essays, directories, bibliographies, journal articles, program descriptions, historical materials, guides, and research reports. Nine topics of interest represented by the publications are as follows: overviews of the issues involved in faculty reduction and summaries of the problem; ideas on alternatives to avoid layoffs; guidelines regarding standards and procedures to be used in faculty reduction; legal considerations and standards affecting faculty layoffs; political considerations and the reduction process; information needs and planning tools; guidelines for the establishment of an appropriate planning process; overviews of the issues of faculty reduction for particular types of institutions; and general information and collective bargaining agreements. Index terms (descriptors) and bibliographic information are included. (SW)

FACULTY LAYOFF LITERATURE AVAILABLE THROUGH ERIC

Assembled October, 1981 by:

Stephen R. Hample
Montana State University

Homer C. Rose, Jr.
University of Michigan

Introduction

This material provides summaries of ERIC documents relating to the issues of faculty reduction and layoff. It is taken from a computer search of the ERIC data base performed by the Clearinghouse on Higher Education in August of 1981. The search was conducted in order to provide background for a summary of faculty reduction literature being prepared for the AAUA-ERIC/Higher Education Administrator's Update series.

The search provided a collected set of valuable sources. Summaries of those most likely to be of value to planners facing the prospect of faculty reduction are shared here in order to provide a single beginning ERIC reference source of background material related to reduction planning.

It is possible to identify nine separate topics of interest in examining the literature of faculty reduction. The document summaries outlined here are grouped according to the topic which they most directly address. The nine areas are:

1. Overviews of the Issues Involved in Faculty Reduction and Summaries of the Problem;
2. Ideas on Alternatives to Avoid Layoffs;
3. Guidelines Regarding Standards and Procedures to be Used in Faculty Reduction;
4. Legal Considerations and Standards Affecting Faculty Layoffs;
5. Political Considerations in the Reduction Process;
6. Information Needs and Planning Tools;
7. Guidelines for the Establishment of an Appropriate Planning Process;
8. Overviews of the Issues of Faculty Reduction for Particular Types of Institutions; and
9. General Information and Collective Bargaining Agreements

The increasing complexity of management and planning within institutions of higher education has fostered the development of more sophisticated theories of management in higher education. Such complexity has also encouraged the development of a number of academic planning tools and models to aid administrators in management through access to data and projections of the consequences of their decisions. The use of such models and the need for increasingly sophisticated planning seems bound to increase if institutional vitality is to be insured in a period of reduced resources. Such management complexity increases the specialized skills required to manage institutions and seems likely to result in additional conflicts between administrators and faculty over governance issues. Academic planning does not produce solutions to all the problems that confront institutions, especially those that relate to social issues such as access and sexual equality. Yet by understanding the complexities of academic management and by the ability of academic planning to provide a means for the development of incremental change reflecting the concerns of the university community, an arena for the resolution of conflict within the university can be established. It is toward such ends that academic planning and academic management must strive. (Author/MSE)

Journal Announcement: RIEOCT80

Conditions affecting the moral and intellectual integrity of American colleges and universities are discussed in a series of papers collected from the 56th American Assembly on "The Integrity of Higher Education." An erosion of public confidence in higher education is noted and it is suggested that the expectations of higher education have not been met by the institutions. Declining enrollments, financial constraints, and increasing government regulations have compounded the problem of demoralization within higher education and demand that the situation be remedied. Papers included are: Not in Our Stars (Frederick dew. Bolman); The Money Crunch: A Financial Analysis (Richard E. Anderson); The Power of Government (Carl Kaysen); The University and Special Interest Groups (Lloyd H. Elliott); Governance and Administration of the University (Richard M. Cyert); Faculty Ethics in Academic Depression (Roy E. Licklider); The Integrity of the Student: A Normative Approach (Willard F. Enteman); The Curriculum (Elizabeth T. Kennan); Reflections (or Fantasies?) on the University (Clarence C. Walton). (SF)

Recent and anticipated declines in openings for new science and engineering faculty are examined, along with recommendations for national policies to counteract this. It is suggested that the decline stems from two key sources: an absence of growth in total faculty size, and low rates of retirement among present tenured faculty. The extent of the expected shortfall in hiring differs considerably by field. Some fields (such as physics) already have an accumulated hiring shortfall of several years duration. In others a shortfall is just emerging, and in still others significant reductions in hiring new faculty may not emerge at all. Faculty age, retirement rate, and enrollment projections are also discussed as they relate to the expected shortage in new faculty openings. It is suggested that damage to the nation's research effort is likely to result from the expected constriction in the flow of new faculty for three reasons: (1) the rate of research innovation, the inflow of new ideas, and the vitality of the research environment will be impaired; (2) continuity in the education and socialization of succeeding generations of researchers will be threatened; and (3) the perceived lack of opportunities for an academic career may discourage able and creative young people from pursuing careers in basic scientific research. To ensure an adequate flow of new faculty into research producing universities and to foster the research efforts of outstanding present faculty, it is recommended that the National Science Foundation establish a program of research excellence awards. The specifics of this program are detailed. (SF)

The survival of higher education institutions is addressed in this book. Strategies and procedures for assuring institutional vitality are outlined, based on the author's 30 years of studying and advising colleges and universities in various states of financial health. The major components of institutional vitality are enumerated, including a well-defined educational mission and clientele, unified administrative leadership, and vigorous cost control. Identified are those institutions in greatest danger, such as privately-supported colleges lacking a distinctive purpose and identity. Chapters discuss such topics as: improving administrative structures, policies, and leadership; management systems for handling crisis and development; anticipating and planning for the future; defining educational mission; enrollment improvement; faculty performance and cost; and implementing survival strategies. A reading list is provided at the end of each chapter for in-depth study. Avoiding error is offered as the best remedy for future ails, best accomplished by having adequate consultants and administrators keenly aware of all the functions of the higher education system. An appendix offers suggestions for increasing income. Also provided are additional references and an index. (LC)

Measures taken to cut costs at the expense of the faculty and the loss in academic quality are shown to be part of a well-organized plan being adopted throughout higher education. Problems have arisen from the activities of the private or semi-private corporate consulting organization in higher education. Taken as a whole, the uncritical use of business principles has led to sets of recommendations and proposals that threaten the future of higher education. Often these firms provide public relations assistance to force the acceptance of predetermined changes in policies. The total absence of considering the concept of quality or the purposes of higher education is the worst aspect of this management trend. References are made to the recommendations of specific consulting firms. The issues involved in the serious shortage of jobs and proposals for tenure quotas are considered. Although such factors as the shortage of public funds have affected higher education, much of the present state of affairs is due to lack of fiscal responsibility on the part of management. Faculty members need to change their position of powerlessness when acting individually through collective bargaining and unionization. (SW)

This review of retrenchment in higher education covers background information, basic concerns, suggestions for making cuts, and lessons learned from experience. Contents concern financial pressures, enrollments, faculty relations during retrenchment, services and programs during retrenchment, administration during retrenchment, and case histories of retrenchment action at specific colleges and universities. Specific topics include: enrollment trends and projections, attrition and retention, faculty development, faculty turnover and tenure ratios, alternatives to tenure, collective bargaining, student/faculty ratios, faculty reduction, student services administration, zero-based budgeting, the decision-making process during retrenchment, public funds, tuition, external funds, and operations. Some important steps that higher education institutions should take to prepare for retrenchment are suggested. Extensive notes and a bibliography are included. (SW)

Midcareer change programs and alternatives for early retirement for college faculty are considered based on the current situation of declining or stable student enrollments, diminished faculty mobility, and increased numbers of tenured faculty. Midcareer change programs fall into two general categories: (1) retraining programs designed to enable faculty members to move from their current disciplines or specialties into other areas with newer and/or greater student demand; and (2) faculty internships and fellowships in private industry or government for a summer or year. Most early retirement programs are relatively unsuccessful, but one includes a reversible component enabling faculty members to try partial retirement with the option of reacquiring full-time faculty status if they determine that early retirement was premature. Three alternatives exist: (1) provision of direct front-end cash settlement before the age of mandatory retirement (i.e., to buy up a faculty member's contract with full or partial payment; (2) provision of early annuity programs, either individual or group-based and with or without partial employment; and (3) the reversible early retirement program. The effects of these options on faculty morale in times of retrenchment are considered. (SW)

A project was undertaken to determine whether there are any nationally significant programs or projects dealing with the emerging problem of tenured faculty needing or wanting to reevaluate their careers and economic situations. Various approaches are described, with examples given. A section about on-campus approaches looks at the environment of individual campuses and the kinds of institutional policies and procedures used to address the issue. Interinstitutional programs are examined in terms of consortia and state systems, and internship and exchange programs. A section on extramural strategies, not officially sanctioned or planned, reviews consciousness-raising efforts, information dissemination by publications and career libraries, workshops, and emergency measures and planning programs for faculty already terminated. Among the recommendations made is a proposal for financial "annual prizes" to reward institutions for development of renewal programs. It is concluded that priorities for immediate action should include an emergency program for terminated faculty, a publication program of faculty career futures, and a program to develop and disseminate model institutional personnel policies. Appendices include a sample faculty interview form and policies, program outlines, and notes on faculty termination for Loyola University of Chicago, Southern Methodist University, Hampden-Sydney College (Virginia), and the California State University and Colleges. The State University of New York Program on Faculty Retraining is described. Retraining is defined as preparation to move from one academic field to another or from one subfield of a discipline to another. It is distinguished from faculty development, involving the acquisition of new skills or knowledge applicable to one's ongoing responsibilities. Faculty retraining is viewed as an opportunity for faculty in areas of low and declining enrollments to retrain in related or subdisciplines of growing or high enrollment. The Retraining Program has attracted faculty ranging in age from 28 to 58 from various professional and degree levels. The costs and funding procedures for the program are examined as well as application and acceptance process. Evaluations from administrators of participating campuses, and from faculty who have completed retraining indicate that the process has provided additional flexibility to colleges and universities confronted by the economics of retrenchment, declining enrollment, and high tenure ratios. It is suggested that retraining is most successful where clear guidelines are established at the outset, where it satisfies both the personal needs of faculty and institution, and where there is a good fit between the extent of career change and the length of the retraining program. Some sample questionnaires are included. Appended are guidelines for application, names of participating SUNY campuses, host campuses for retraining, faculty retraining grants awarded, a statistical summary, an outside evaluation, and articles and papers on the SUNY Retraining Program. Journal Announcement: RIEJUN79

An overview of current literature about alternatives and variations to existing concepts of tenure of faculty is presented. Tenure continues the appointment of faculty until retirement unless there is dismissal for adequate cause or unavoidable termination because of financial exigency or change of institutional program. Academic freedom is assured through procedures providing for academic due process in the case of dismissal for cause and economic security is provided by the expectation of continued employment. A combination of demographic changes, judicial decisions, shifts in the college curriculum, and financial restraint in allocation of resources for higher education suggest that this traditional understanding of tenure systems in higher education may change. In future periods of declining enrollments and financial restraint, more tenured faculty will be terminated, with tenure providing small measure of job security. Two major alternatives to tenure are contract systems and modifications combined with traditional tenure systems. There are numerous variations of contracts that replace tenure, but no major university has yet adopted any form of a contract system. Modifications include extension of the probationary period, establishing periodic evaluation of tenured faculty, establishing a nontenure track, and extensive use of part-time faculty appointments. Some major studies that document the concept and process of tenure in American higher education are cited. (SW)

The trend toward increasingly limited opportunities for careers in colleges and university research, teaching, and service and possible courses of action to deal with the situation are discussed in this collection of papers. The focus is largely on decisions to be made on the individual college or university campus. Responses that the educational administrators can take to cope with the expected over-expansion of academic manpower in relation to the number of positions available include: action for effectiveness in utilization of faculty under so-called steady-state conditions; and steps toward improved adaptation of graduate educational programs, which are the primary source of academic manpower. The following papers are presented: "Demand For New Faculty in the South, 1976-1986," by David S. Spence; "Responding with Quality," by W. Todd Furniss; "Career Options and Program Changes in Graduate Education," by Cameron Fincher; and "Influencing Academic Outcomes: The Power and Impact of Statewide Program Review," by James R. Mingle. Enrollment assumptions on which the demand projections are based are included in the appendix. (SW)

Language: English

Document Type: PROJECT DESCRIPTION (141); CONFERENCE PAPER (150)

Geographic Source: U.S.; New Jersey

Journal Announcement: RIEFEB80

The development of a staff flexibility index at Glassboro State College is presented. It was an outgrowth of retrenchment problems for tenured faculty. Institutional flexibility was defined as the continuing ability of the institution to implement new or modify existing programs, employing a rationale that sees the ability to employ new faculty or redirect present faculty to meet staffing requirements for planned program implementation and development. Projections of faculty for three sets of steady-state conditions--least optimistic, most likely, and most optimistic--were made for a five-year period. Factors that were necessary components of the index were identified and all factors were ranked in one of five categories and assigned a relative weight to reflect the potential flexibility each factor gave to the development of an overall renewal index. Budgetary factors were considered and applied to the analysis. Four implications of the project are outlined, including modification of existing reward structure to encourage voluntary reassignment and the establishment of funds for eight guest lecturers/artists in residence. Three tables outlining the factors under each of the steady-state conditions are included. (PHR)

The implications of faculty workload and formula budgeting issues on higher education in the 1980s are discussed. Because of declining enrollments and tight resources it is suggested that state legislative committees in the 1980s will accelerate their requests for faculty workload data related to formulas for the allocations of full-time faculty. Executive Officers of state commissions or state boards of higher education in the United States were surveyed to determine the effect of faculty workloads on appropriations. In more than one-half of the responding states, the survey indicated that faculty workloads would affect appropriations. Impacts of this concern over faculty workloads include: increased state encroachments in academic decisionmaking, reduction of the quantity and quality of research, more state control over what is taught because of the emphasis on student credit-hour production, and an increased unionization of faculties. It is suggested that these impacts could prompt institutions to develop faculty workload formulas as a protection against the use of inadequate workload measures by state committees. (Author/SF)

A study was conducted in 1969-1970 to determine the policies for the acquisition and termination of academic tenure and the procedures used to implement these policies in state universities and land-grant colleges. Eighty institutions were studied, and the investigation was based on the official publications or statements obtained from them. It is concluded from the results of the study that: (1) policies and procedures vary in degrees of completeness, clarity, and perfection; (2) tenure plans of the institutions are as diverse as American higher education itself; (3) a comparison of the present results with those of previous studies shows improvement in policies and procedures; (4) the rank at which faculty members are eligible for tenure has not changed significantly since earlier studies; (5) probationary periods have not changed significantly since earlier studies; (6) the higher the academic rank, the larger the percentage of tenured faculty; (7) the 30 percent of responses indicating that data are not available shows a serious deficiency in recordkeeping of tenure termination proceedings and faculty dismissals; (8) tenure termination cases are not frequent in these institutions; and (9) the tenure termination rate during the study was higher in some institutions than in others. Document Type: POSITION PAPER (120)

Geographic Source: U.S.; New Hampshire

Journal Announcement: RIEDEC79

Statements and documents concerning the criteria and standards used for faculty promotion, retention, and tenure in member institutions were collected by the Deans' Council of the New England Teacher Corps Network. The response presented in this publication is made in the form of a memo to the faculty senate, from the dean of a college of education. It is concluded that as more uniformity in policies, more precision in statements of criteria and standards, and more regulation of practices are sought, there will be a gain in an important efficiency index and in institutional definitions of fairness. However, there is a consequent risk of diminished adaptiveness. In the extreme, both positions are seen as damaging, and are cautioned against. It is suggested that a Professional Equity Compact be used by institutions as a tool for equity in faculty personnel matters. Such a formal document is proposed and would contain a statement of rights, responsibilities, privileges, obligations, objectives, focused interests, and whatever other referents are thought to be important to the individual and the institution for evaluation purposes for a specific period of time. Faculty development is considered in relation to student needs through instructional development, faculty needs through personal and professional development, and the needs of the institution through a focus on organizational development. Faculty development strategies implemented at California State University, Long Beach, have addressed the need to provide augmented learning for faculty in declining departments to teach part-time in areas of high enrollment, the need for faculty renewal and revitalization, and the need to assist faculty in improving their organizational competence within academic departments and the larger organizational body. One approach to organizational development has been a consultative service to academic departments interested in conducting a departmental self-study. Environmental factors that affect college faculty and the institutions include greater choices available to students and a diversified student body, including adult students. These new environmental forces and changing expectations of colleges lead to the need to reexamine the purposes of the institutions, as well as assisting faculty of declining departments to develop secondary teaching areas. Faculty retraining activities at California State University, Long Beach, are noted, and vignettes of faculty are provided as illustrations. The Inter-Campus Faculty Consultation Program for Instructional Improvement is also described. (SW)

Document Type: BIBLIOGRAPHY (131)

Journal Announcement: RIEAUG78

The protections usually afforded by the courts and institutional custom when a tenured faculty member is dismissed for cause are not available when dismissal is the result of a determination of financial exigency. The courts have not ascertained what constitutes financial exigency, preferring to leave the definition to the governing authority and administration of each institution. The courts have relied on administrators alone to establish procedures for identification of programs and individuals to be affected by the determination of financial exigency. There are two approaches that faculty and administration may take to resolve these problems: the informal method of reaching agreement on the basis of some form of shared authority, and the formal method of including in collective bargaining agreements procedures that provide protection for faculty interests and job security. Document Type: EVALUATIVE REPORT (142); SERIAL (022)

Geographic Source: U.S.; Georgia

Journal Announcement: RIEJUN80

The need for more consistent and comprehensive procedures for evaluating faculty performance is discussed in this newsletter. Declining student enrollments and financial restraints have created a "no growth" climate on campuses and it is suggested that this environment will require a two-thirds drop in the demand for new faculty at a time when the annual supply of Ph.D.s is increasing. Therefore a systematic faculty evaluation procedure is suggested that offers administrators a method of ensuring faculty quality and provides assistance with decisions concerning promotion, salary, tenure, and termination. The use of evaluation for faculty development and instructional improvement is also emphasized. Various techniques utilized by faculty improvement programs are mentioned and the connection between the quality of teaching and improved student learning is examined. Areas of faculty evaluation often include instruction, research, professional growth and development, student advising, university service, community service, administration and management, departmental service, and publications. A model of an evaluation system for assessing individual faculty members is presented. Multiple sources of data are identified for use in faculty evaluation. These include deans, vice-presidents, department chairmen, other faculty, self-evaluation, and students. Several recommendations for developing evaluation procedures are included. (SF)

Modifications are presented to a 1967 document that contained recommendations concerning academic freedom, academic responsibility, and tenure for faculty members in Texas public community and senior colleges and universities. The recommended standards constitute patterns or guidelines and are not binding on any institution and may be varied in any respect. Procedures concerning faculty dismissals and nonrenewals of nontenured faculty at the end of the term contract are also covered. The need for written terms of employment, information on due process proceedings in dismissal cases, and the issue of tenure during conditions of financial exigency and the phasing out of programs are addressed in appendices. Language: ENGLISH

Document Type: RESEARCH REPORT (143)

Journal Announcement: RIEMAY77

This document contains the results of California court decisions in litigation involving the status, or status and pay of part-time faculty in California community colleges. The information in the report was obtained by asking each California community college president and district superintendent to report whether their college or district was, or had been, involved in such litigation. A 100% response revealed sixteen cases involving part-time faculty. One case had been decided by the state Supreme Court, six by Courts of Appeal, four by Superior Courts, and five were pending in Superior Courts. The facts and circumstances of each case, and the significance of the Courts' decisions are presented, with the case reports organized by judicial level. It is not advisable to draw general conclusions from the legal decisions that are described since each case is a unique set of facts and circumstances. It is, however, valuable to recognize which cases have established precedents. It is also clear that Education Code 13337.5 has become the central focus of the preponderant number of cases covered in this report. Attorney general opinions and current case statuses are appended. Journal Announcement: RIEOCT80

A study of purposes, processes, and results of faculty evaluation in higher education looks at court litigation and the criteria used--or not used--in evaluation: student evaluation, peer evaluation, and faculty qualities examined in courts (defamation of character, immorality, overt undesirable behavior, incompetence, lack of qualifications). Methods used by West Virginia in handling faculty evaluation are examined. It is concluded that thorough faculty evaluation will be more important than ever in a period of retrenchment. It is found that the courts have generally taken a hands-off approach to evaluation, or have supported the institutions if they followed appropriate procedures, recognizing the necessity for institutional autonomy in such matters. Guidelines and future considerations for both faculty and administrators are given. It is recommended that faculty maintain good contacts with administrative authority; have a third party present when dealing with a difficult situation with students or administrators; keep written memos and full records; design and use student evaluations; avoid verbal attacks on administrators; keep current on laws, regulations, and policies that might affect the teaching position; and keep out of categories such as "immoral, behaviorally undesirable, or incompetent". It is recommended that administrators: keep aware of policies and regulations; be aware of their roles in carrying out these practices; keep to relevant issues and procedures in evaluation; guarantee that evaluators are competent; maintain communication with faculty; use legal counsel, be consistent, and create an atmosphere of fairness. (MSE)

Designed to be used either independently or as a companion to "The Law of Higher Education" (1978), this book serves as a reference to current legal issues, as well as to primary and secondary materials concerning higher education law. Part One, Overview of Postsecondary Education Law, examines the evolution of law relating to postsecondary education, sources of postsecondary education law, and the public-private dichotomy. In Part Two, The College and Trustees, Administrators, and Agents, the question of authority and liability is discussed. Part Three, The College and the Faculty, focuses on employment policies, personnel decisions, academic freedom, and staff reduction. Part Four, The College and the Students, examines legal status, admissions, financial aid, grades and credits, student organizations, student housing, athletics, grievance systems, and procedures suspension, dismissal and other sanctions. Part Five, The College and the Community, discusses zoning, community activities, and community access to institutional property. Focus in the next two chapters is on government relations, including state systems, state regulatory laws, state chartering, federal regulation, federal aid, and civil rights compliance. The final section, The College and the Accrediting Agencies, examines accreditation systems and agencies. For reference ease, this book is organized using the same chapter, section, and sub-section titles and numbering as the previous book, including complete case and subject indexes. Also supplied are cross references to pertinent pages and sections within the new volume and within the original volume. (LC)

The way that college faculty and institutions are affected by financial exigency is examined through a study of case law. Selected cases demonstrate the legal principles involved when faculty are dismissed and seek relief in the courts. Cases concerning private colleges relate to tenured faculty, because nontenured faculty in private have legal standing unless their contract is breached. Financial exigency, even if the contract is silent on this possibility, appears to be a justifiable reason for dismissal of tenured faculty. Courts have ruled, according to the contract, that the financial exigency must be "bona fide" and must be the "bona fide" reason for the dismissal. The courts may require that the institution take reasonable efforts to find the dismissed faculty member another suitable position within the institution. Those who decide which faculty to dismiss must use fair and reasonable standards in making the determination. Public colleges base their relationship with faculty both on contract and constitutional provisions. Nontenured faculty must usually show that they have a property right to continued employment, that the dismissal violated their right of liberty, or that the dismissal violated other constitutionally protected rights, such as freedom of speech. For tenured faculty in public colleges, courts have ruled that financial exigency is a legitimate reason for dismissal. Affected tenured faculty must be accorded minimal due process procedures. A bibliography, including case citations, is included. (SW)

The relationship between faculty bargaining and the loss of institutional autonomy is explored by examining the collective bargaining experience of the Pennsylvania State College and University system. The study is chronological, tracing the theme through three stages: (1) the governance of the state system before collective bargaining (1960-71); (2) the initial experience with faculty bargaining (1971-74); and (3) financial pressures and retrenchment (1975-76). An overview is given of the growth of state controls over higher education and faculty bargaining. Appended is the table of contents of the collective bargaining agreement between the faculty bargaining agent and the Commonwealth of Pennsylvania. (MSE)

Observations on Collective Bargaining: Implications for Academic Management

Kelley, Edward P., Jr.; Rodriguez, Robert L.
Liberal Education, 43, 1, 102-17 1977

Language: ENGLISH

Faculty unionism and collective bargaining have emerged as dynamic forces on both public and private campuses throughout the country. Factors in their growth are described, along with their influence on the campus itself, trustees, students and alumni, governance, the presidency and deans, and grievance and arbitration, retrenchment, and faculty salaries. (LBH)

Document Type: CONFERENCE PAPER (150)

Journal Announcement: RIEAUG78

Papers presented at the fifth annual Conference of the National Center for the Study of Collective Bargaining in Higher Education are provided. The union's and management's views of the impact of fiscal crisis on collective bargaining are given in the first two papers by Robert W. Miner and Caesar Naples. The next two presentations by Robert Nielsen and Donald H. Wollert deal with the role of the faculty union in governance and the possible conflicts created. The remaining papers and authors deal with: (1) peer judgment and due process (Irwin H. Polishook and Thomas A. Shipka); (2) union and administrative roles in building support for higher education (Fred E. Crossland and Edward B. Fiske); (3) the pre-collective bargaining organization period (Robert E. Doherty); (4) compensation and academic bargaining (Robert Birnbaum, William W. Brown, and Courtenay C. Stone); and (5) recent legislative, administrative, and judicial developments (June M. Weisberger). Membership of the National Center's Faculty Advisory Committee and a list of publications from the Center are also provided. (SPG)

Journal Announcement: RIEAPR80

A survey of University of California faculty time-use was undertaken as a replacement for less accurate methods of estimating faculty time-use. After sections introducing the study and presenting highlights from the report, focus is on the methodology. Particulars such as the sampling procedures and measures used to evaluate data quality are discussed. Calculation methods are explained, and the activities of both full-time and part-time faculty are reported. Among major findings of the study were that full-time faculty members averaged over 62 hours a week on university-related activities of all types including: 27.1 hours on instructional activities, 22.9 hours on research/creative activities, 7.5 hours in university service, and 4.9 hours in professional activities/public service. Appendices detail the estimating procedure and the frequency distributions of responses on key variables, and provide notes on the methodology and illustrative field materials used in data collection. Journal Announcement: RIEDEC80

The impact of alternative institutional policies on faculty mix, salary expense, and turnover is assessed. Guidelines are offered to aid health science school administrators to maintain faculty vitality through a period of retrenchment and new federal retirement law. A "typical" hypothetical school of medicine is simulated using a computerized model, and alternative policy provisions are assessed through a series of simulation runs. The Tenure and Promotion Policy Simulator model is a Monte Carlo simulation that can incorporate a variety of faculty appointment arrangements that exist in medical schools and can include different hiring, promotion, tenure granting, and resignation probabilities characteristic of the clinical (physician) faculty versus the basic science faculty. The ability of individual faculty policies to achieve an annual expense rate reduction of one percent per year over a ten-year period is assessed. The following areas are analyzed: retirement, promotion and tenure, contract systems, hiring distribution (age, rank, appointment type), and faculty replacement. (SW)

EDRS Price - MF01/PC04 Plus Postage.

Language: English

Document Type: DISSERTATION (040)

Geographic Source: U.S.; South Carolina

Journal Announcement: RIEMAY79

Throughout South Carolina, the Technical Education System had experienced a leveling of the growth that had characterized its early years, and a sharp decline in state financial support over the last three years. At Piedmont Technical College, where enrollments had remained relatively stable, the substantially reduced state of financial allocations had forced the college to reduce expenditures across a wide range of college activities. Typically across the board reductions were made in most budget categories to balance planned revenue with forecasted expenditures. The prospects of continued austere funding by the state as well as a potential drop in enrollment required the college to look to other alternatives to achieve essential economies. While the administration had viewed staff reductions with reluctance, the statewide enrollment decline pattern and reduced appropriation prompted the president of Piedmont Technical College to request the development of a reduction in force procedure. The purpose of this research was to develop this policy. This study focused on the review, analysis and evaluation of literature concerning retrenchment and reduction in force. Additionally an analysis was made of those aspects of governance at Piedmont Technical College that defined the parameters within which the retrenchment policies could operate. A review was made also of state policies that concerned personnel reductions. As a result of this study a reduction in force procedure was developed and subsequently approved by the local governing board as official policy. The approved policy and related documents are appended. (Author/MSE)

Language: ENGLISH

Document Type: RESEARCH REPORT (143)

Journal Announcement: RIEMAR75

Results of a self-study made of the institutional planning and management of Grays Harbor College are provided. The study utilized the Systems Evaluation Applied to Renewal and Change (SEARCH) program. An analysis of the general application of the funding formula, as used in the community college system in Washington, discusses instruction funding, libraries funding, plant maintenance and operations funding, student services funding, and Administration funding. The major staffing difficulty, relative to available funds, was in the area of teaching personnel; thus, an analysis was made of the statewide average student/faculty ratio as compared with the student/faculty ratio by instructional division of the college. The results of the SEARCH study are presented as to administrative conclusions and decisions, major criteria to be utilized, and expected effect on the curriculum (Life Science Division, Business Administration Division, English-Speech Division, Health and Physical Education Division, Social Science Division, Science and Mathematics Division, Humanities Division, Vocational Division, and Administration Division). Appendixes present: A. Financial Analysis for 1973-1974; B. chart of State General Fund--Dollars per FTE; C. Non-teaching Professional Personnel MIS-6, Community College System; D. Community College Librarians; E. Community College Counselors; F. System Ratios of Classified Employees to FTE; G. and H. copies of correspondence; I. Comparison of Over-all GHC Divisional Faculty/Student Ratios to Appropriate Clusters of State Over-all Faculty/Student Ratios, Tenure Regulations, and Academic Employee Reduction Procedure. (DB)

Language: English

Document Type: PROJECT DESCRIPTION (141)

Geographic Source: U.S.; Pennsylvania

Journal Announcement: RIEFEB81

A description of reduction in force (RIF) planning as undertaken by Pennsylvania State University is presented. It is suggested that because a university is a system, adjustments to personnel functions must follow systemic rationale to be successful. It is proposed that RIF planning is a personnel planning process that can be evaluated by using universal values, responsibilities, and differentiation of personnel systems. Responsibilities of the university president, budget office, and academic units for implementing RIF, values that shape personnel systems, and the needs for adjustments in personnel forces at all levels are considered. It is noted that although specific circumstances vary from one college or organization to another and from one time to another for each organization, the formulation of plans and their continued revision and updating are indispensable activities for organization executives. A large organization, such as the Pennsylvania State University, can have departments with especially trained staff to provide planning data and analyses. (SW)

Document Type: BOOK (010)

Journal Announcement: RIEJUL75

This work, designed as a sequel to "A Constant Variable" (Cohen and Associates, 1971), is intended for the same audience--administrators, trustees, counselors, and instructors in community colleges, university professors of higher education, and graduate students preparing for work in community colleges. The book describes the external and internal pressures operating on community colleges. The external pressures are societal forces such as state-level commission and coordinating councils that mandate institutional roles, financial structures, and curriculum and instructional patterns. The internal pressures are the preexisting institutional forms and the personal predilections of the staff and students. Attention is focused on the intersection of these pressures, the points where external forces meet internal counterpressures. The book is arranged in three parts (1) Social Forces Intrude (State Influence Grows; Collective Bargaining Impinges on Management; Free Tuition Faces Its Doom; Affirmative Action Arises); (2) Institutions Respond (Reduction in Force and the Seniority System; Expanding the Market; Community Development: Impossible Dream?; Experimental College Venture); and (3) Faculty Persevere (Understanding the Faculty; Increasing Job Satisfaction; Relating Tenure, Evaluation, Faculty Development; The Open Door: How Much Is Enough?). Government: State

Throughout their history, most black institutions of higher education have struggled against debilitating circumstances: antagonistic communities and legislatures, poverty, poorly prepared students, competition from white colleges, and program duplication with white institutions. In the period of serious desegregation at the elementary and secondary levels, a different approach has been needed for higher education. Two broad alternatives have evolved: elimination of marginally successful black colleges, or enhancement of their programs and desegregation efforts. A variety of approaches have been taken to the concept of enhancement. Some, such as funding for more efficient management, emphasizing the institution's unique role, and changing the school's name, have a negative aspect. Others are more positive: deliberate placement of attractive programs in black institutions, improvement of student quality at entry, employment of able faculty to attract good students and funding to support their efforts. Simple infusion of extra money to black colleges may be necessary for states to disregard formula or budget guidelines and provide some "catch-up" funds to correct years of under-funding. It may also be necessary to provide the administrator with discretionary powers to adjust procedures and policies to clearly benefit the institution and its students. In sum, it is essential not to eliminate black colleges, which have fulfilled their purposes well in general, despite difficult obstacles. (MSE)

Document Type: RESEARCH REPORT (143)

Journal Announcement: RIEMAY78

The problems and promises of very small colleges, those with fewer than 750 students, are examined systematically in this pilot study. Such colleges represent an estimated four or five percent of the nation's undergraduate enrollment. This report is based on preliminary studies of three small colleges. Focus is on what this kind of institution has to offer; economic issues; dynamics of the mid-1970's; common factors (e.g., budget deficits, sources of income, enrollment decline, curriculum offerings, faculty workload and quality, student characteristics); and the issue of viability. It is concluded that these institutions are in much the same difficulty that afflicts much of unendowed private higher education, and that there is nothing inherent in the smallness of an institution that accounts for financial troubles. Journal Announcement: RIEOCT78

There is no evidence of financial crisis in higher education, if by "crisis" one means the failure of institutions to balance revenues and expenditures. Most institutions were and are making ends meet, though not without some difficulty; most colleges and universities have had trouble recruiting sufficient numbers of students. As a rule, the institutions that attracted more students increased their expenditures for instruction per student at a slower rate than those that lost students. In both public and private sectors, the institutions that have been losing students most rapidly have raised their tuition most rapidly; this threatens private enrollment more than public. Most savings have been made at the expense of teaching and professional staffs, whose salaries failed to keep up with the cost of living. Under most circumstances, there is likely to be a hair-breadth balance between expenditures and revenues in both the public and private sectors in 1980. By 1985, unless private enrollment declines, non-state supported schools are likely to face deficits in their instructional account, and the public sector books are likely to balance without any unusual effort. Serious problems are anticipated for some institutions. (Author/MSE)

Academic Freedom and Tenure: City University of New York: Mass Dismissals Under Financial Exigency

AAUP Bulletin, 63, 2, 60-81 1977

Language: ENGLISH

The AAUP investigating committee reports on the mass dismissals faced by teachers at the City University of New York, which was a direct result of the fiscal disaster in New York City. A chronology of major events in the city and the university is presented along with an assessment of their impact. (L8H)

Document Type: HISTORICAL MATERIAL (060); REVIEW LITERATURE (070)

Geographic Source: U.S.; Massachusetts

Journal Announcement: RIEAUG80

A discussion of the economics of higher education begins with an outline of the history of higher education, and a profile of American postsecondary institutions in the recent past and the present. An analysis of the outlook for enrollments follows. Data are given on enrollment trends since 1951, according to sector (public versus private), institution type, and degree level and subject area. Demographic profiles illustrate a forecast of enrollment trends through 2,000. The geographic distribution of the traditional college-age population is outlined, and graduate and professional education populations are also discussed. Financial data on recent funding and funding trends in private and public institutions and on faculty illustrate a discussion of revenue and fiscal capacity, especially as they are affected by the federal government. It is concluded that increasingly intense competition for students will be important in higher education economics in the 1980s, and there will be continuing efforts to economize. The intellectual vitality of the faculty is seen as important to the health of higher education, though the demand for new, younger faculty members is foreseen to be very small in the near future. Appended are a list of references and suggestions for further reading. (MSE)
