This report describes in detail the distribution of funds obligated by 8 federal agencies to 2,100 universities and colleges, and 33 Federally Funded Research and Development Centers that were managed by academic institutions, between fiscal years 1963 and 1967. The funds were provided for academic science (research and development, R. and D. plant, other scientific activities) and nonscience activities, and represented more than 95% of all direct federal support to institutions of higher education. Total federal support increased from \$1.413 million in 1963 to \$3.311 million in 1967. In 1967, \$2.323 million were provided for academic science and about \$987 million for nonscience activities. Colleges and universities in the East North Central US received \$602 million, or the largest portion of federal funds committed to a major geographic division, and 2-year institutions received more than \$117 million. The Department of Health, Education, and Welfare accounted for \$2,231 million, or two-thirds of total federal support to universities and colleges in 1967, with more than 95% of this amount obligated by the Public Health Service and the Office of Education. The report contains 20 illustrative tables in the text and 4 statistical tables in the Appendix, one of which shows the total federal obligations to all colleges and universities in 1967 by state, institution, and agency. ## GENERAL NOTE

- The Federal obligations in this study were reported by eight agencies that accounted for 95 percent of all Federal support to universities and colleges.
- Federal obligations are reported for the Federal fiscal year, ending June 30 of the year shown.
- Educational data are shown for the academic year, which varies somewhat among institutions, in hyphenated form (e.g., 1965-66 is 1 year).

## Foreword

THE RESPONSIBILITY for the continued growth of American science and technology has fallen, in large part, upon the Nation's universities and colleges. The academic community endeavors to meet this responsibility by supplying the scientific and engineering manpower and fundamental scientific knowledge required to meet the demands of the future through programs for science education and basic research.

One of the main obstacles faced by institutions of higher education is the problem of keeping pace with the rapidly rising graduate and undergraduate enrollments and growing costs of science education and basic research. It became evident as early as the 1940's that educational institutions did not have the financial resources to carry out the expansion needed to accommodate the increasing demands on their facilities. Over the past two decades, and particularly since 1960, the Federal Government has assumed an increasingly larger share of the burden of financing these activities to the point where Federal funds now account for the largest single source of support for academic science in universities and colleges. Federal support of higher education for both science and nonscience activities has grown to well over \$3 billion annually.

In 1965, agency heads were directed by the President to take all steps necessary and compatible with their primary interests and the basic statutes to strengthen the academic science capabilities of the Nation's universities and colleges. Federal administrators responded to this directive first by seeking to create new, imaginative programs—such as the Institutional Development Program of the National Science Foundation—that are specifically designed to give broad support to the development of academic science and engineering. This was followed by review of existing Government programs in search of new methods for insuring an optimal allocation of the Federal resources supporting academic institutions.

The success of these tasks requires continuing, thorough analyses of the needs of the academic community and all practical alternatives for satisfying these needs. It also requires concerted action among officials of all Federal agencies to reduce the overall costs of administering Government programs and to resolve, whenever possible, conflicts in programs which might arise from differences in agencies' missions.

Some of the basic and more difficult questions confronting responsible officials involve the determination of the best mechanism for strengthening academic science, the selection of institutions to receive Federal support, the proper distribution of Federal funds among geographic areas, and the assessment of the impact of Federal policies on academic science. This report is part of a series of studies undertaken to generate information that will help resolve these questions.

The report was prepared under the general direction of Charles E. Falk, Planning Director of the National Science Foundation. The Office of Data Management, Irvin Voltin, Head, was responsible for processing the data. The analysis and the preparation of the report were done in the Office of Economic and Manpower Studies, H. E. Riley, Head.

DECEMBER 1968.

## Acknowledgments

This report was developed in the Office of Economic and Manpower Studies, National Science Foundation, under special guidance of Kenneth Sanow, Head, Statistical Surveys and Reports Section. The survey was conducted and the report prepared under the direction of Lawrence A. Seymour, Study Director, Analytical Studies Group. Major responsibility for coordination and final review was taken by William L. Stewart. The data were compiled and the report written by Norman Friedman, Cecelia Hilgert, Robert Loycano, and Xavier Puslowski. Irene Woodall supervised the preparation of statistical material.

**In all tables of this report, details may not add to totals because of rounding. Percentages were calculated on the basis of thousands of dollars and may differ from those based on figures rounded to millions of dollars.**

## Summary

- Total Federal support to universities and colleges increased from \$1,413 million in 1963 to \$3,311 million in 1967. The yearly growth, however, had slowed from 42 percent and 32 percent in 1965 and 1966, respectively, to 9 percent in 1967.
- Academic science obligations reached \$2,323 million in 1967, a gain of \$137 million over 1966. However, among the component categories, "other science activities" increased by \$86 million or about 11 percent, while the increase in research, development, and R. & D. plant together amounted to only \$50 million or 4 percent. The two growth rates represent a continuation of a trend toward increased emphasis on science education and institutional development programs.
- Federal obligations to universities and colleges for research, development, and R. & D. plant totaled \$1,439 million in 1967. Research and development, although growing steadily to a level of \$1,324 million between 1963 and 1967, show signs of leveling off. R. & D. plant has remained relatively stable, fluctuating between \$101 million and \$126 million during this period.
- Between 1964 and 1967, support for nonscience activities grew from \$96 million to \$987 million. As a percent of the total obligations, these nonscience funds rose from 6 to 30 percent.
- The distribution of Federal support to institutions of higher education in the major geographic divisions showed little change from 1966 to 1967. Those in the East North Central division again received the largest geographic portion of Federal funds, with \$602 million, or almost one-fifth of the total. By State, relationships were fairly close between the distribution of Federal obligations to the institutions and the populations, degrees awarded, and student enrollments.
- Total Federal support to universities and colleges was more widely dispersed in 1967 than in 1966 and 1963. The 100 institutions receiving the largest amounts accounted for less than 69 percent of the total in 1967, compared to more than 70 percent in 1966 and over 85 percent in 1963. Of the obligations for academic science alone, these institutions received four-fifths in 1967. Institutions ranking from 101 to 200 increased their share of the 1967 academic science funds to 12 percent of the total, from 11 percent in 1966.

- Federal obligations to 631 2-year institutions amounted to more than \$117 million in 1967. Academic science programs, primarily science education activities, accounted for 20 percent of these funds; the remaining 80 percent was obligated for vocational education programs, construction of new facilities, and other nonscience activities. Federal support to Federally Funded Research and Development Centers associated with universities and colleges decreased by \$10 million between 1966 and 1967 to \$908 million.

- The Department of Health, Education, and Welfare continued to account for two-thirds—\$2,231 million in 1967—of total Federal support to universities and colleges. More than 95 percent of the HEW total was provided by the Public Health Service and the Office of Education, with obligations of \$1,109 million and \$1,019 million, respectively. For the other one-third, the seven remaining agencies accounted for \$1,080 million in support to universities and colleges. More than 60 percent of non-HEW outlays came from two agencies—the National Science Foundation and the Department of Defense—throughout the 1963-67 period.

## I. Introduction

### Background

This report is the third in a series prepared for the Federal Council for Science and Technology's Committee on Academic Science and Engineering (CASE). Data contained in the report cover Federal fiscal years 1963-67 (ending June 30 of the designated years). Definitions of terms used in this report and technical notes are contained in appendix A.

The establishment of the CASE data-collection system followed a 1965 Presidential directive to the heads of Federal departments and agencies instructing them to encourage the maintenance of outstanding quality in science and science education at universities and colleges, to provide funds for existing science programs, and to continue and increase Federal support for science at potentially strong institutions. To assist in the formulation of programs that would implement the policies outlined in the Presidential directive, the Committee called for a Government-wide reporting system to collect data on federally supported academic science and engineering.

Eight Federal agencies supplied the data contained in this report on Federal obligations for research and development, R. & D. plant or facilities, other science activities, and nonscience activities at U.S. universities and colleges and the Federally Funded Research and Development Centers (FFRDC's) managed by academic institutions. Data covering fiscal years 1963-66 update those

contained in previous reports in the current series.<sup>1</sup>

The collection of 1968 data on Federal funds obligated to universities and colleges will include five additional agencies: Office of Economic Opportunity, Agency for International Development, and the Departments of Housing and Urban Development, Labor, and Transportation. The addition of these agencies will enable the CASE reporting system to account for more than 99 percent (instead of the 95 percent here) of all Federal support to universities and colleges.

CASE is currently undertaking a more comprehensive data-collection system that will obtain information on the individual Federal projects in academic science. Obligations for each project will be classified according to categories that, when aggregated, will allow a more detailed analysis of Federal support for academic science. Information on Federal obligations for academic science will be supplemented by data on the utilization of manpower in Federal projects at institutions of higher education that receive Federal support for academic science.

See also "Relation to Previous Reports" at end of this chapter.

## Scope and Limitations of Data

The data for this study were provided by the following agencies, accounting for more than 95 percent of all direct Federal obligations to universities and colleges:

- Department of Agriculture
- Atomic Energy Commission
- Department of Commerce
- Department of Defense
- Department of Health, Education, and Welfare
- Department of the Interior
- National Aeronautics and Space Administration
- National Science Foundation

These agencies reported the amounts they obligated to individual institutions of higher education and related FFRDC's according to four categories: research and development, R. & D. plant, other scientific activities, and nonscience activities. This report shows details of the funds obligated to some 2,100 universities and colleges and 33 FFRDC's. Chapters II through IV discuss Federal obligations to U.S. universities and colleges. Data on the FFRDC's are shown in chapter V. The *Technical Notes* are included in appendix A. Appendix B contains information on total Federal obligations, by agency, for each university, college, or university system that received Federal funds during 1967.

## Relation to Prior Reports

Most of the data shown in this report are comparable to those shown in the two preceding reports on Federal support to universities and colleges compiled for CASE. However, a brief analysis has been added to chapter IV of the present report dealing with Federal obligations to 2-year institutions. In addition, a number of changes that affect the data published in earlier reports were as follows:

(1) The Department of Health, Education, and Welfare in 1966 reported that \$10,968,000 was awarded to the State University of New York Central System. Since these funds were then redistributed by the SUNY Central System among the SUNY recipient institutions, in this report the data for 1966 show HEW obligations to the SUNY Central System much lower at \$933,000 and those to the Downstate and Upstate Medical Centers much higher at \$7,032,000 and \$3,003,000, respectively.

(2) A number of Baptist institutions were erroneously shown in the preceding CASE report as receiving funds from the Federal Government. Among them, the New Orleans Baptist Theological Seminary was mistakenly reported as receiving \$58,000 from the National Science Foundation in fiscal year 1965.

Other institutions—including Samford University, Judson College, and California Baptist College—through an unfortunate combination of circumstances were mistakenly shown as receiving \$1,000 in fiscal year 1966 from the Office of Education. The actual payment of money for these three institutions was less than \$200 for reimbursement of funds provided by institutions for student loans under title II, Public Law 35-864 of the National Defense Education Act. These funds are not considered direct support to institutions of higher education as defined in this report.

Consistent with statistical reports of this nature, this report shows amounts rounded to the nearest \$1,000; awards of \$500 or less are shown as \$1,000 in order to insure that the total number of institutions that receive Federal funds are included. With respect to CASE totals, the rounding error is statistically insignificant. However, for individual institutions that receive small amounts, the rounding error can become significant and is misleading if examined from an accounting perspective. It was not anticipated at the time the reporting instructions were formulated that the rounding error for small amounts would be a source of concern or embarrassment to some institutions.

(3) An Interagency Task Force on Federally Funded Research and Development Centers, established to review the criteria for classification of FFRDC's in statistical surveys, made several changes. The agreements reached by this task force are reviewed in chapter V and the *Technical Notes* (appendix A). Generally, however, the new criteria caused several changes in the composition of the FFRDC universe. For example, the Apollo Guidance Project at the Massachusetts Institute of Technology, classified as an FFRDC in earlier CASE reports, is now included as part of MIT. Also, the Naval Arctic Research Laboratory at the University of Alaska and the

Navy Biological Laboratory at the University of California have been reclassified from FFRDC's to parts of the parent institutions. One center administered by a university consortium was added to the list of FFRDC's: Cerro Tololo Inter-American Observatory administered by the Association of Universities for Research in Astronomy, Inc. Nine OE-financed university centers that conduct research dealing primarily with the educational process were added to the FFRDC list. And NASA added one more university center, for a total of two.

(4) As a result of a reorganization, obligations to universities and colleges by the National Institute of Mental Health are included as part of the "other" Public Health Service in the tabular data for fiscal year 1967. Before 1967, the National Institute of Mental Health was part of the National Institutes of Health.

(5) Funds awarded to the central office of the City University of New York have been incorporated into a single report, identified in the tabulations as "City University of New York

Central System." Before, these funds were split between two groupings: City University of New York, all institutions, and City University of New York programs.

(6) In the NSF portion, four programs were reclassified among various categories of academic science support so that the CASE data would be compatible with those published in *Federal Funds for Research, Development, and Other Scientific Activities*.<sup>2</sup> Reporting of funds for two NSF programs—Specialized Engineering Research Facilities and Chemistry Research Instruments—were reclassified from research and development to R. & D. plant. The other two programs—Research Participation for College Teachers and Undergraduate Research Participation—were moved from research and development to "other" scientific activities.

## II. Trends in Federal Support

### Total Federal Obligations, 1963-67

Over the 1963-67 period, Federal support for all types of higher educational activities has increased by several hundred million dollars each year, from \$1,413 million in 1963 to \$3,311 million in 1967 (chart 1). Annual rates of growth varied sharply, however. For example, increases in 1965 and 1966 were 42 percent and 32 percent, respectively; but in 1967 the increase slowed to 9 percent (table 1). The rise in Federal support between 1964 and 1966 can be attributed to the opening of new channels of support during this period. Among these were the Higher Education Facilities Act of 1963, the Higher Education Act of 1965, and other programs specifically designed to strengthen developing institutions of higher education.

### Agency Patterns of Support

Among the six agencies providing more than \$100 million to academic institutions in 1967, the Department of Health, Education, and Welfare continued to experience the highest growth, both absolutely and relatively. An increase of \$279 million (14 percent) in 1967 brought HEW's total to \$2,231 million, a level more than 5½ times that of the second-ranking agency, the National Science Foundation (table 2). While HEW was increasing outlays to aid higher education in 1967, the Department of Defense and the National Aeronautics

and Space Administration were reducing theirs by \$37 million and \$11 million, respectively. These reductions represented decreases of more than 12 percent for DOD and almost 8 percent for NASA. The Department of Agriculture, the Atomic Energy Commission, and NSF posted 1967 gains of \$4 million, \$13 million, and \$20 million, respectively.

It should be noted that, within HEW, the apparent shift in the distribution of support between the National Institutes of Health and "other" Public Health Service (OPHS) in 1967 was due to a Public Health Service reorganization that transferred the National Institute of Mental Health from NIH to OPHS. This accounted for \$122 million of the \$199 million increase in OPHS obligations between 1966 and 1967.

HEW in 1967 ranked first in every category of support except R. & D. plant, where it was second to NSF. The emergence of HEW as the primary Federal source of university and college support has been due primarily to the expansion of activities of PHS in health fields and of OE in higher education. These major areas of mutual interest to HEW and institutions of higher education have accounted for sizable commitments of funds for medical and health-related research, student aid and training, and construction of undergraduate and graduate facilities.

## Categories of Support

The CASE reports cover Federal obligations in three categories of academic science—research and development, R. & D. plant, and other science activities—and in nonscience activities at universities and colleges. Both “other science” and nonscience activities are largely those connected with education. The obligations for academic science accounted for 70 percent of the total in 1967.

In 1967 the R. & D. portion (excluding plant), reached \$1,324 million (table 3). Although research and development continued to rank first among the four categories in 1967 (40 percent of the total), the \$48 million R. & D. increase in 1967 was the smallest in the 1963–67 period. In relative terms this represented a slowdown in growth from an average annual rise of 15 percent in the 1963–66 period to 4 percent in 1967.

Agencies commit their higher education funds to research and development in widely varying degrees, depending upon the character of programs required to carry out the agency's objectives (table 3). For example, OE allocates 3 percent of its higher education budget to research and development, while DOD, NASA, AEC, and the Department of the Interior classify more than 80 percent as research and development. The missions of the latter four agencies require far greater commitment to research than does that of OE, whose principal programs, such as financing the construction of undergraduate facilities, are outside the sphere of academic science.

The rapid growth in OE's higher educational programs has caused much of the sharp decline in R. & D. outlays as a proportion of the Federal total of funds going to academic institutions. With OE data, the R. & D. portion declined from 60 percent in 1964 to 40 percent in 1967. Without OE data, the R. & D. ratios would have declined only 6 percentage points, from 62 percent in 1964 to 56 percent in 1967.

Within academic science, the “other science activities” group is the only component that increased its share of total Federal obligations over the 1963–67 period. To illustrate this trend in academic science activities, average annual growth rates between 1963 and 1967 were: research and development, 12 percent; R. & D. plant, 2 percent; and “other science activities,” 22 percent. Thus,

these other science activities maintained a growth rate nearly twice that of research and development between 1963 and 1967. In line with the 1965 Presidential directive to the Federal agencies to broaden and strengthen the institutional and geographical distribution of funds to universities and colleges, the agencies have emphasized programs designed to foster institutional development wherever potentially strong institutions exist. The magnitude of newly implemented programs created for this purpose is one of the biggest single factors in the rapid growth of this other science category.

Among the agencies, only NASA significantly curtailed programs classified under the other academic science category. This was due to general budget cutbacks in many of its programs, including the Sustaining Universities Program for institutional development, which is largely in the “other science” classification.

The academic science component reached a peak of 94 percent of total Federal support to the institutions in 1964; but from that point on, funds for nonscience programs<sup>1</sup> grew from 6 percent (\$96 million) of the total in 1964 to 30 percent (\$987 million) in 1967 (chart 1). In terms of Federal program size, nonscience activities moved past R. & D. plant in 1965 and “other science” activities in 1966 and was still gaining rapidly on the leading category of support—research and development—at the end of the period. The ratio of nonscience funds to R. & D. funds rose from 10 percent in 1964 to 75 percent in 1967.

The major contributor to nonscience activities is the Office of Education. Of the \$987 million for nonscience in 1967, \$723 million were reported by OE. The pattern of growth in nonscience support since 1964 has closely paralleled growth of total OE spending for higher education. Much of the increase in these obligations has been due to the implementation of the provisions in the Higher Education Facilities Act of 1963, which assigns to OE responsibility for aiding in the construction of new undergraduate and graduate facilities. Under the CASE reporting system, most of these funds for undergraduate facilities were classified under nonscience activities.

<sup>1</sup> For the definition of nonscience programs, see *Technical Notes*, page 49.

### III. Geographic Distribution of Federal Support

#### Distribution by Geographic Division and State

The geographic distribution of Federal funds to universities and colleges reflected the overall lower rate of increase in 1967. As shown in table 4, during 1963-66, total Federal obligations to these institutions increased each year at an average rate of 29 percent. From 1966 to 1967, however, the increase apparently was leveling off at 9 percent.

This same slowdown was felt in the various geographic divisions, although the rates varied widely. For example, during 1963-66, the average annual growth rates ranged from 19 percent (New England) to 43 percent (East South Central division), and from 1966 to 1967 the increases ranged from 1 percent (Pacific division) to 18 percent (East South Central) and 22 percent (Puerto Rico, the Virgin Islands, and Guam). As part of the slowdown, 14 States and the District of Columbia received smaller amounts of this Federal support in 1967 than in 1966. (See table 5.)

Academic science obligations followed a similar trend. Although the average annual growth rate

of the Federal total of these funds was 18 percent from 1963 through 1966, the increase from 1966 to 1967 was 6 percent, representing a rise from \$2,187 million to \$2,323 million. All except one of the geographic divisions received more Federal support for academic science in 1967 than in 1966. The East South Central, South Atlantic, and West North Central divisions were well over the national average, with increases of 20 percent, 12 percent, and 9 percent, respectively. Smaller amounts were received in 1967 than in 1966 by 14 States and Puerto Rico, Guam, and the Virgin Islands.

The slowdown in spending was especially evident in Federal support for nonscience activities. Here, the funds more than doubled each year between 1963 and 1966 in all but one of the geographic divisions, but between 1966 and 1967 the percentage changes were much lower. In the nine principal divisions (50 States), they ranged from 36 percent more to 4 percent less; in Puerto Rico, the Virgin Islands, and Guam it was 75 percent more, for relatively small amounts. Over the longer period, nonscience support greatly

increased in importance from 1963, when it represented only 6 percent of total Federal obligations to universities and colleges, to 1967, when it was 30 percent. This shift was reflected in every State. In 14 States, the District of Columbia, and Puerto Rico, Virgin Islands, and Guam, non-science activities made up more than 40 percent of their total Federal support in 1967. Arizona had the highest percentage of non-science funds in 1967—62 percent of its total, compared to 10 percent in 1963. Generally the States with less-known, developing institutions show heaviest dependence on non-science support for construction of new undergraduate and graduate facilities.

The institutions in the East North Central division remained in the lead in receipt of Federal support, with \$602 million or 18 percent of the 1967 total. Although a larger amount than in the preceding year, this represents a slight decrease in the relative share (from 18.5 percent in 1966), partly explained by a \$19 million reduction in funds from the Department of Defense to institutions in these States. However, the DOD decrease was largely offset by an increase of nearly \$17 million from the National Science Foundation. (See table 6.) Two-thirds (almost \$400 million) of the total funds to institutions in the East North Central was obligated by the Department of Health, Education, and Welfare, which had accounted for somewhat less than one-half of this division's obligations in 1963. DOD obligations accounted for 8 percent of the total for the East North Central division, compared to 12 percent in 1966 and 18 percent in 1963.

Although the Pacific division received less support for its universities and colleges from five of the eight Federal agencies in 1967, it remained the third-largest recipient. It was awarded \$474

million, up from \$469 million in 1966 and \$211 million in 1963. This decreasing growth rate can be explained by the extensive development of academic institutions already achieved in these States in recent years. Each of the eight Federal agencies provided a smaller percentage of its total obligations to institutions in this division in 1967 than in 1966.

In general, the geographic concentration has remained at about the same level in 1967 as in 1966, but the dispersion of funds was wider than in 1963 (chart 2). The proportions of the total declined in the Middle Atlantic, Pacific, East North Central, and New England States but gained in the low-ranking divisions—West North Central, East South Central, West South Central, and Mountain.

The institutions in all divisions except New England received more than twice as much Federal support in 1967 as in 1963. The amounts more than tripled in the East South Central division, from \$53 million in 1963 to \$181 million in 1967, and in Puerto Rico, the Virgin Islands, and Guam, from \$7 million to \$24 million. Federal support increased more than 2½ times in the West South Central States, from \$86 million to \$237 million, and in the Mountain States, from \$63 million to \$166 million.

Institutions in all the geographic divisions relied much more heavily on support from HEW in 1967 than in the earlier years. This agency furnished at least two-thirds of total support in each geographic division except New England.

Among the Federal agencies obligating large sums to universities and colleges each year, the Public Health Service within HEW was the only one in 1967 to keep pace with its average annual rate of increase during 1963-66—18 percent

throughout. Its funds in 1967 increased in all geographic divisions but one. PHS support in the Mountain division increased the most in 1967—64 percent—reaching a total of \$49 million. The institutions in the Middle Atlantic division remained the largest recipients, with \$209 million in 1967.

The decrease in obligations to universities and colleges by either or both DOD and the National Aeronautics and Space Administration was felt in all but two geographic divisions. Among them, the Middle Atlantic, East North Central, and Pacific divisions had Defense cuts of more than 20 percent from 1966 obligations, and NASA decreased funds by more than 15 percent in the South Atlantic, Mountain, and Pacific States.

When considering the geographic distribution of Federal funds to higher education in States, as

in table 6, it is important to note that year-to-year changes can be greatly influenced by a few large grants or contracts. They show up only in the year obligated, although spending of the funds may extend over a period of several years. It is helpful to isolate, where possible, these large one-time grants from the recurring types of Federal support in order to avoid misinterpretation of data showing trends in the State distributions of Federal support to academic institutions.

### Distribution in Relation to Population and Selected Educational Variables

Comparisons of support of higher education to population and certain educational variables serve as “normalizers” by taking account of the large differences in the areas and populations of geographic divisions and States. The relationships examined in this section include geographic distributions of degrees awarded and rankings of States by population, degrees, enrollments, and Federal obligations for academic science.

In interpreting these relationships, some limitations must be considered. First is the timelag between input of the original investment in higher education and output in earned degrees, particularly at the graduate level. For comparison here, statistics for 1965–66 are the latest complete data available on degrees awarded in the sciences and engineering. A second consideration is that statistics do not reflect differences in the quality of education or differences in the capabilities of university faculties and graduate departments. Third, distortions in the pattern are caused by the “national” character of many academic institutions that draw students from many States, and their graduates disperse across the United States. A somewhat inaccurate picture is presented, therefore, if the benefits of Federal support are related to the particular States in which the institutions are located.

Shifts in the geographic pattern of Federal obligations from 1963 to 1967 were much like those in the number of degrees awarded during a similar period ending in academic year 1965–66 (table 7). The two largest recipients of Federal support—the groups of institutions in the East North Central and Middle Atlantic divisions—received proportionately smaller amounts in 1967 than in 1963, and the number of degrees awarded by institutions in those two divisions, while remaining higher than in other divisions, also had declined relatively during a somewhat comparable period. Among

TABLE 7.—Distributions of Federal obligations to universities and colleges and degrees awarded by universities and colleges, by geographic division and State, various years

individual States, New York had decreased in its percentage of total Federal obligations to universities and colleges located there and in the degrees awarded. Illinois registered similar declines—except that the proportion of bachelor's degrees awarded in the sciences and engineering increased. Michigan registered a relative increase in doctoral degrees awarded in the sciences and engineering, while declining in all the other percentage categories. In Pennsylvania, the institutions remained at the same level in percentage of total Federal support received in both 1963 and 1967, but declined in their percentage of total degrees.

In a different pattern, the institutions in the Pacific division received a lower share of total Federal obligations in 1967 than in 1963, but their proportion of all degrees awarded increased. California, the principal Pacific State in these comparisons, declined relatively in total Federal and academic science funds, but degrees awarded in the sciences and engineering increased for all levels.

As in the past, New England contrasted with most other divisions. Its institutions received a smaller share of Federal obligations in 1967 but showed an increase in the relative number of degrees awarded in the sciences and engineering during 1965-66.

The universities and colleges in the West North Central and East South Central divisions had relative increases in Federal obligations in 1967 but decreases in their proportions of total degrees awarded in 1965-66. The South Atlantic, West South Central, and Mountain States all showed relative increases in both Federal obligations and degrees awarded.

Table 8 shows the total Federal obligations to universities and colleges and the academic science obligations in relation to population, degrees awarded, and student enrollment. In this table, the States are listed in order of total Federal obligations to academic institutions in 1967 and ranked in terms of the other variables.

The ranking in terms of total Federal obligations differs little from that for 1966, and relationships among the variables remained fairly close. Each of the first 10 States ranked in terms of total obligations to their universities and colleges also stood relatively high in terms of population, student enrollment, and degrees awarded; California and New York were the top two States in all cases. The top six States in total obligations maintained the same ranks as in 1966; in addition, these States remained in the same standing for earned degrees in the sciences and engineering during 1965-66 as during 1964-65. For academic

<sup>a</sup> Includes the District of Columbia; excludes U.S. service schools.

<sup>b</sup> Includes M.D. and D.D.S.

<sup>c</sup> Duplicate numbers indicate "tie" for place; e.g., same number of doctor's

degrees were awarded in Kentucky and Kansas, in Oklahoma and Nebraska, and in North Dakota and Wyoming, of master's degrees, in South Carolina and New Hampshire.

science obligations, California and New York exchanged positions, with New York highest in 1967. Texas became seventh and Ohio eighth, a reversal of the previous year's positions, but rankings for earned degrees in the sciences and engineering did not substantially change for the two States. Indiana moved into the top 10 for total Federal

obligations, while maintaining similar rankings as in 1966 for population, student enrollment, and degrees awarded.

Among exceptions to the generally close relationships were Massachusetts, Maryland, and the District of Columbia, with considerably higher rank in Federal support to universities and colleges

than in population. Conversely, Florida, New Jersey, Virginia, and Maine were higher in population than in total obligations.

A closer relationship existed between the State distributions of academic science support and earned degrees in the sciences and engineering, particularly doctorates awarded. This was a reflection of academic science projects sponsored by the Federal Government, especially the mission-oriented agencies, in universities with large graduate faculties. As the doctoral degrees include M.D. and D.D.S. degrees, this relationship was strengthened by the funding of medical and dental schools by the National Institutes of Health.

### Distribution of R. & D. Obligations

Federal obligations for research and development to institutions of higher education leveled off considerably in 1967, rising to \$1,324 million from \$1,276 million in 1966. This represented a gain of 4 percent, compared with an average growth rate of more than 15 percent each year during 1963-66. As shown in table 9, institutions in the Pacific division and Puerto Rico, the Virgin Islands, and Guam received smaller amounts of R. & D. support in 1967 than in 1966. The amounts in individual States are shown in table 10.

New England registered an increase of \$21 million in 1967, which brought the total to \$188 million—12 percent higher than in 1966. This was the largest advance made by a geographic division and represented 42 percent of the total increase in Federal R. & D. obligations to universities and colleges. Institutions in Massachusetts were award-

ed more than \$146 million for research and development, a rise of 17 percent from 1966; they accounted for over three-fourths of the New England total of Federal obligations for this type of support.

The Middle Atlantic division continued to be the largest recipient of funds for research and development, although it declined slightly from 1966. Institutions in these States received \$251 million in 1967, for almost one-fifth of the U.S. total. New York and Pennsylvania both received less for research and development, and New Jersey gained slightly.

The East North Central division remained at about the same level as in 1966, with \$237 million, or 18 percent of the total Federal R. & D. support to institutions of higher education. Michigan and Illinois both showed decreases of over 4 percent.

The East South Central division had an increase of more than 20 percent in obligations for research and development. This was the result primarily of Alabama's 62-percent increase, mostly from Public Health Service awards amounting to nearly \$4 million more in 1967.

Federal support to universities and colleges for R. & D. plant fluctuated widely among the geographic divisions in 1967, as shown in table 9. Much of this fluctuation can be directly attributed to the initiation or completion of large individual plant projects. Declines were registered in 20 States, the District of Columbia, and Puerto Rico, the Virgin Islands, and Guam (table 10). Some of the decreases were substantial: Florida, 90 per-

cent; Missouri, 82 percent; California, 42 percent; and Texas, 39 percent.

While total Federal obligations to the institutions for R. & D. plant in 1967 increased less than 2 percent over 1966, in the Middle Atlantic division they almost doubled—to more than \$27 million from \$14 million. The amount in New York rose from \$7 million in 1966 to nearly \$20 million in 1967; the National Science Foundation provided \$12 million in 1967.

In the East North Central States, the R. & D. plant funds were increased by two-thirds in 1967, to \$33 million, or more than one-fourth of the U.S. total. The South Atlantic and East South Central divisions also registered substantial gains.

In recent years there has been less emphasis on research and development as a type of support to academic institutions. Instead, interest has developed in programs of education in the sciences (other science activities) and in nonscience activi-

ties. Table 9 shows the extent to which each geographic division relied on research and development and R. & D. plant support in 1963, 1966, and 1967.

R. & D. support accounted for 59 percent of total Federal obligations to universities and colleges in 1963 but only 40 percent in 1967 (table 1). In five States—Maine, North Dakota, South Carolina, Mississippi, and Idaho—R. & D. funds accounted for less than 20 percent of their totals of Federal obligations to universities and colleges. But in four States—Massachusetts, Rhode Island, California, and Alaska—R. & D. funds continued as more than half of the Federal total of academic support. As shown in table 10, the distribution of funds for R. & D. activities has not changed significantly since 1963; thus, States with institutions having outstanding science facilities continue to attract the most Federal R. & D. support.

## IV. Distribution of Federal Support by Institution

### Total Federal Obligations to Individual Universities and Colleges

In 1967 a total of 2,056 universities and colleges received Federal support (table 11) from the eight Federal agencies covered in this report, approximately the same number of institutions as in 1966. The amount of Federal funds received by the institutions reflected an apparent leveling off in the rate of increase in 1967—up 9 percent in 1967, compared to the 29-percent annual average in the period 1963–66. In 1967, over 80 percent of the Nation's institutions of higher education received Federal support; in 1963, less than half. Of the 1,190 institutions that awarded degrees in the sciences and engineering in 1965–66,<sup>1</sup> over 97 percent received Federal support in 1967—a total of 1,156.

The distribution of Federal support in 1967 was not quite as wide as in 1966 but definitely greater than in 1963. The three largest classes in terms of size of Federal program obligations showed substantial gains. The number of institutions receiving \$10 million or more in 1967 rose to 85, for just over 4 percent of the total number of universities and colleges receiving Federal funds; in 1966 the group represented just under 4 percent of the total. The number of institutions receiving \$5 million to \$10 million also increased. And the \$1 million-to-\$5 million class increased from 212 in 1966 to 222 in 1967, for 11 percent of the total.

The lowest program-size class showed less concentration. Universities and colleges receiving less than \$100,000 numbered 872 in 1967, down from 914 in 1966, and represented more than 42 percent of the total. In 1963 this group included 60 percent of the total number of institutions.

Federal funds to the 100 institutions receiving the largest amounts in 1967 (table 12) continued the trend established in the years 1963 through 1966—the total amount obligated to them was greater but accounted for a smaller proportion of

<sup>1</sup> Department of Health, Education, and Welfare, Office of Education data.

TABLE 11.—Number of universities and colleges receiving Federal obligations, ranked by size of Federal program, 1967

Size of Federal program	Number of institutions	Percent distribution
Total.....	2,056	100.00
\$10 million or more.....	85	4.13
\$5 million to \$9.9 million.....	53	2.58
\$1 million to \$4.9 million.....	222	10.80
\$500,000 to \$999,000.....	213	10.36
\$100,000 to \$499,000.....	611	29.72
Less than \$100,000.....	872	42.41

the total. In 1967 these institutions received \$2,278 million, or almost 69 percent of the total obligations, but they accounted for more than 70 percent in 1966 and 85 percent in 1963. Support to these universities and colleges declined as a part of the total obligations by about 2 percent in 1967, but had declined in this portion at an average annual rate of more than 6 percent in the period 1963–66.

The composition of the 100 institutions receiving the largest amounts of Federal obligations in 1967 varied little from that of 1966. When noting some of the shifts in the composition, it is important to consider that one large grant or contract may constitute much of the total obligation to any one institution in any one year. Although the grant or contract may extend over several years, the entire amount is reported for the year during which the obligation was made. For example, Rensselaer Polytechnic Institute and the University of California at Irvine ranked in the top 100 for the first time in 1967, primarily owing to grants of around \$2 million awarded by the Office of Education for building or remodeling graduate facilities under title II of the Higher Education Facilities Act of 1963. Seven others were new additions to the top 100: Wake Forest University, Hahnemann Medical College and Hospital, Medical College of South Carolina, Kansas State University, University of New Mexico, Medical College of Virginia, and St. Louis University.

TABLE 12.—Federal obligations to the 100 universities and colleges receiving the largest amounts, 1967

100. University of California—Santa Barbara.....	California.....	7,464	.23	5,009	.22	2,455	.25

<sup>a</sup> Main university only.

A change in reporting categories occurred in 1967. The identification of certain additional systems resulted in some universities and colleges being considered as separate entries for the first time. (See *Technical Notes*, page 45.) For example, in 1966 the University of Puerto Rico, with its component parts summed for an institutional total, ranked 51st. In 1967, with each component

reported separately, the University of Puerto Rico at Rio Piedras ranked 71st and the University of Puerto Rico at San Juan was 97th.

In 1967 the Massachusetts Institute of Technology regained the position as the largest recipient of Federal funds (\$96 million); except for 1966 it had ranked first each year since 1963. Before 1967 the Apollo Guidance Project was classified

by NASA as a Federally Funded Research and Development Center, and all Federal obligations to it were omitted from the obligations reported for MIT. In 1967, however, NASA removed the Apollo Guidance Project from the FFRDC classification and included all project obligations with those of MIT. (See *Technical Notes*, page 47.) The University of Michigan was the second-largest recipient, with \$65 million in 1967.

Eight of the top 10 recipients were the same institutions as in 1966. The University of Wisconsin at Madison and the University of Minnesota rose to the top 10, while the University of Chicago and Ohio State University dropped to 12th and 21st, respectively. Among the top 10 institutions, the University of California at Berkeley rose to fifth position; and Stanford University dropped from third to 10th, largely because of a 47-percent reduction in obligations from DOD.

Among the top 25 recipients, 14 institutions increased their shares of the total Federal support to universities and colleges in 1967. This was a notably high number of institutions increasing their proportions in a year when total funds increased at a lower rate than in previous years. In contrast, of the first 25 institutions ranked according to their total Federal obligations in 1966, only four had increased their percentages of the total from 1963.

Increased obligations from the Public Health Service in 1967 resulted in upward shifts in some of the top-ranking recipients. The University of Maryland was 15th in 1967, but 30th in 1966; obligations from PHS more than doubled—\$15 million in 1967, from \$7 million in 1966. The University of Alabama was 20th in 1967, up from 68th in 1966; PHS obligations rose to \$21 million from \$8 million. Wayne State University moved from 70th to 23rd in 1967; its PHS support was \$21 million, nearly four times the amount in 1966. The University of Arizona moved up to 25th from 36th with PHS obligations of \$16 million.

### Academic Science Obligations to Individual Universities and Colleges

Academic science obligations include those for research and development, R. & D. plant, and other science activities, such as education in the sciences and science information. Table 13 shows a close relationship between academic science support and degrees awarded in the sciences and engineering. This has developed because universities and colleges awarding relatively large numbers

of earned degrees in the sciences and engineering have tended to be among the largest recipients of Federal support for academic science.

In 1967, \$2,084 million was granted to institutions awarding doctoral degrees in the sciences and engineering, including medical doctorates. Although the amount obligated to these institutions was nearly 6 percent greater than in 1966, it decreased as a proportion of the total academic science obligations—just under 90 percent in 1967, compared to 91 percent in 1966. In addition to awarding all of the Nation's doctoral degrees in the sciences and engineering, these universities and colleges awarded more than 85 percent of the master's and 52 percent of the bachelor's degrees in the sciences and engineering in 1965-66. This was a slight decline in the proportion of master's degrees and a small increase in the proportion of bachelor's degrees awarded by those institutions in 1964-65.

Institutions awarding master's degrees as the highest level in science or engineering received nearly \$117 million in 1967 (table 13)—25 percent more than in 1966. In academic science support, the share for these institutions rose from a little more than 4 percent in 1966 to 5 percent in 1967. These universities and colleges awarded larger shares of both bachelor's and master's degrees in academic year 1965-66 than in 1964-65. The institutions awarding the bachelor's as the highest degree in the sciences or engineering received 3 percent of the academic science total and awarded 23 percent of the bachelor's degrees in 1965-66.

TABLE 13.—Federal obligations for academic science to universities and colleges, 1967, by level of highest degree conferred in the sciences and engineering, 1965-66

[Dollars amounts in millions]

Highest degree awarded in sciences or engineering, 1965-66	Academic science obligations, 1967		Percent of degrees awarded in the sciences and engineering, by level, 1965-66		
	Amount	Percent	Doctor's <sup>a</sup>	Master's	Bachelor's
Total.....	\$2,323.8	100.00	100.00	100.00	100.00
Doctor's <sup>a</sup> .....	2,084.2	89.69	100.00	85.49	52.33
Master's.....	116.6	5.02	.....	14.51	24.36
Bachelor's.....	71.3	3.07	.....	.....	23.31
No degree.....	51.7	2.23	.....	.....	.....

<sup>a</sup> Includes M.D. and D.D.S. degrees. Also includes academic science obligations to central systems where at least one institution in the system awarded the Ph. D. in the sciences and engineering in 1965-66. Separate data for the university systems are shown in appendix table B-4.

The universities and colleges not awarding degrees in the sciences and engineering had a two-thirds rise in academic science obligations to \$52 million in 1967. These institutions—primarily liberal arts colleges, junior colleges, community colleges, and theological schools—make up about one-half of the total number of universities and colleges. Although they participate principally in nonscience Federal activities, such as programs for the construction of new facilities, they are becoming more concerned with science activities. As a result, some of the Federal agencies have designed programs specifically for developing and strengthening the science capabilities of these less-known institutions.

The pattern of distribution of academic science support, constituting 70 percent of total Federal obligations to universities and colleges in 1967, was similar to that of total support. The principal difference was somewhat more concentration of the academic science funds than of total Federal obligations because the institutions with better scientific resources received more of the Federal support. For example, nine institutions that ranked in the top 100 for academic science did not rank in the top 100 in terms of total Federal obligations. Those nine, mainly professional institutions emphasizing science programs with large grants from PHS, were Polytechnic Institute of Brooklyn, SUNY Downstate Medical College, New York Medical College, Case Institute of Technology, Rockefeller University, Virginia Polytechnic Institute, Brandeis University, M.D. Anderson Hospital and Tumor Institute, and Louisiana State University at New Orleans.

The 100 universities and colleges receiving the most Federal support for academic science granted 90 percent of all doctorates awarded in the sciences and engineering in 1965-66, as well as 66 percent of all master's, 38 percent of bachelor's, and 77 percent of the medical degrees (table 14). These percentages were somewhat lower than those for 1964-65. Generally, universities and colleges with the largest amounts of academic science support were those awarding the largest numbers of graduate degrees in the sciences and engineering. However, among individual institutions, the University of California at Berkeley had the greatest share of all degrees awarded in the sciences and engineering but ranked only fifth in terms of academic science support.

The distribution of academic science funds was heavily concentrated within the group of univer-

sities and colleges that ranked in the top 100 in terms of total Federal obligations (table 15). These institutions received just over 80 percent of total academic science support—a little less than the 81 percent in 1966. Thus, the universities and colleges ranking below the top 100 had increased their share of the academic science total to almost 20 percent in 1967, from 19 percent in 1966 and 13 percent in 1963.

## **R. & D. Obligations to Individual Universities and Colleges**

As in other categories of support, Federal R. & D. obligations to universities and colleges were highly concentrated among the top 100 recipients of R. & D. support. Their total of \$1,166 million in 1967 made up 88 percent of the total Federal obligations for these purposes. (See table 16.) This degree of concentration has not changed significantly since 1963, when the top 100 institutions received just under 90 percent of the total.

In the past, obligations for research and development have originated in the mission-oriented agencies. When awarding grants and contracts, these agencies have traditionally sought the universities and colleges with well-established graduate programs and research facilities in the sciences and engineering. Consequently, R. & D. funds have been closely associated with Ph. D. degrees awarded in the sciences and engineering. The 96 Ph.D.-granting institutions included among the top 100 in terms of R. & D. support in 1967 awarded almost nine-tenths of all Ph. D. degrees in the sciences and engineering in 1965-66. This close relationship, much like that in 1963, shows that Federal R. & D. funds continued to be obligated to those institutions with well-developed research facilities.

Table 16 shows the agency sponsorship of research and development in the universities and colleges ranked in the top 100 in 1967. Each of the eight Federal agencies concentrated more than two-thirds of its total R. & D. obligations to institutions in this group. The Atomic Energy Commission, the Department of Commerce, and the National Aeronautics and Space Administration each obligated more than 90 percent of its R. & D. support among them.

The composition of the top 100 institutions in terms of R. & D. support was similar to that in 1966. The Massachusetts Institute of Technology retained its position as the largest recipient of

<sup>a</sup> Main university only.

<sup>b</sup> All medical degree data are shown in the figures for University of Texas Central System.

R. & D. funds; Federal obligations rose to \$86 million in 1967 from \$73 million in 1966, due primarily to the \$12 million increase from the Department of Defense. Despite a smaller total of R. & D. support, the University of Michigan remained second, receiving \$41 million. The nearly \$7 million

decrease from DOD was partially offset by increases from the Department of Health, Education, and Welfare, and the National Science Foundation. There were only four new entries on the top-100 list: St. Louis University, University of California at Riverside, University of Massachusetts

TABLE 15.—*Total Federal and academic science obligations to universities and colleges receiving the largest amounts, ranked in various groups, 1967*

Number of institutions (ranked in total Federal obligations)	Percent of total Federal obligations	Percent of academic science obligations

All other.....	17.81	7.72

setts, and Kansas State University. Within the top 10, there was one change from 1966: the University of Wisconsin at Madison displaced the University of Pennsylvania in 10th place.

### Federal Obligations to 2-Year Institutions

The 2-year institutions considered in this section are those listed in *Opening Fall Enrollment in Higher Education, 1966*, published by the Office of Education. They are included in the information on total Federal obligations and are listed with the other institutions in appendix table B-4, with total amounts received, by agency, in 1967. These institutions have been accredited or approved by a nationally recognized accrediting agency, by a State department of education, or by a State university. Institutions that are branches or components of other institutions are not considered as separate institutions here or in the OE listing.<sup>2</sup>

<sup>2</sup> Although the data reported in the CASE data-collection system include additional 2-year institutions, only those designated by OE as 2-year institutions are dealt with in this section. As a result, 91 2-year institutions were reported to CASE as receiving Federal support in 1967 but were not specifically designated by OE as 2-year institutions. Most of them were components of other institutions of higher education and, hence, did not have separate status. For example, the University of Wisconsin's 2-year campuses received Federal funds in 1967, but they were not listed by OE as separate, 2-year institutions. In total, these 91 institutions received \$13.2 million in 1967, \$2.4 million in academic science obligations and \$10.8 million in nonscience activities. In other sections of this report, however, the sums are included with the amounts reported by the agencies, and the institutions are listed in appendix table B-4.

The 2-year institution is unique in the higher education system in the United States. It provides additional educational opportunities at a time when 4-year institutions are not readily able to absorb larger enrollments. It offers three types of programs: transfer, terminal, and continuing education. Many of the terminal programs are specialized and are designed for specific occupations. The terms "junior college" and "non-degree-granting institution" are often used interchangeably with "2-year institution." Many of the recently established community colleges are 2-year institutions; they enable students to enter with only a minimum fee. Because communities have vastly different needs, 2-year colleges have developed in a variety of institutional types, including independent junior colleges, 2-year colleges in large city systems, junior colleges in multicampus districts, and technical colleges or institutes. These institutions numbered 755 in fall 1966, and enrollment reached more than 1 million—one-fifth of the total number of students enrolled in institutions of higher education.<sup>3</sup> The American Association of Junior Colleges has predicted that the enrollments will reach 3 million by 1972.<sup>4</sup>

Federal obligations to 2-year institutions amounted to more than \$117 million in 1967. A total of 629 institutions located in 46 States, the District of Columbia, Puerto Rico, and the Virgin Islands shared in this support. (See table 17.)<sup>5</sup> When compared to total Federal obligations to all universities and colleges, the amount to 2-year schools represented 3.5 percent of total funds. The number of 2-year institutions receiving support was 31 percent of all recipient universities and colleges.

Academic science obligations amounted to more than \$23 million, one-fifth of total support to 2-year institutions in 1967. Within academic science, the "other" science activities accounted for almost \$22 million, or over 92 percent. This was a result of emphasis placed on support of education in the sciences. R. & D. funds to 2-year schools were less than \$2 million in 1967; R. & D. plant support was only \$108,000.

<sup>3</sup> Department of Health, Education, and Welfare, Office of Education, *Opening Fall Enrollment in Higher Education, 1966*. Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1966.

<sup>4</sup> *1968 Junior College Directory*. Washington, D.C.: American Association of Junior Colleges, 1968.

<sup>5</sup> In addition, three "central systems" in California received Federal obligations in 1967.

TABLE 16.—Federal obligations for research and development to the 100 universities and colleges receiving the largest amounts, by agency, 1967

Federal obligations to 2-year institutions for nonscience activities were \$94 million in 1967, accounting for 80 percent of the total. The Office of Education provided most of this amount through programs aiding vocational education, as well as the construction of new facilities.

The South Atlantic division was the largest recipient of Federal support to 2-year institutions; the 98 institutions in this division received \$21 million, almost 18 percent of the total in 1967.

This contrasts with a lower percentage of total funds received by all universities and colleges in this division in 1967. The Middle Atlantic division was the second-largest recipient with \$19 million obligated to 81 2-year institutions. The Pacific division had the largest number of recipient 2-year institutions—a total of 111, with 79 of them located in California; this division received \$16 million in 1967.

## V. Federally Funded Research and Development Centers

FEDERALLY Funded Research and Development Centers (FFRDC's) administered by universities and colleges received from Federal agencies \$908 million in fiscal year 1967 (table 18). These centers, formerly called Federal Contract Research Centers (FCRC), receive all or a substantial part of their support from the Federal Government to perform activities or manage programs that are primarily concerned with research and development and are considered beyond the capabilities of any single established organization. Although these FFRDC's function as relatively autonomous components of the university establishment, some centers make important contributions to the educational and research activities of the parent institution.

The establishment of FFRDC's was an outgrowth of World War II demands of the Federal Government for highly qualified talent to conduct scientific investigations on projects related to military objectives. At that time, neither Federal agencies nor universities were prepared, in terms of personnel and facilities, to undertake the special assignments that were largely concerned with the

development of the atomic bomb. Most of the centers were, and continue to be, established at or near universities where they could draw upon the available scientific and technical manpower.

The range of interests of these centers is quite large and their activities involve essentially all the major fields of science. Not only does their work materially affect many of the critical national programs, but it also exerts an important influence on the progress of academic science. A list of such activities undertaken by FFRDC's would include projects such as the following:

Jet Propulsion Laboratory—in California, work involving the development of unmanned lunar and space exploration, including early exploration of planets with automated spacecraft.

Lawrence Radiation Laboratory—in California, studies of controlled thermonuclear reactors to generate energy through fusion of light nuclei and important contributions toward improving the efficiency of nuclear weapons.

Los Alamos Scientific Laboratory—in New Mexico, largely concerned with weapons development, also research in rocket propulsion, reactor technology, and physical research in the medium-energy region.

<sup>a</sup> One of six administered by university consortia.

<sup>b</sup> Includes amounts subcontracted principally to industrial firms for performance, as follows: 1963, \$107 million, 1964, \$145 million, 1965, \$163 million;

1966, \$144 million, 1967, \$119 million

<sup>c</sup> Administered by both university and consortium.

<sup>d</sup> Discontinued July 1, 1967

Argonne National Laboratory—in Illinois, research in high-energy physics using the zero gradient synchrotron, somatic effects of radiation, and engineering of liquid metal fast breeder reactors.

Lincoln Laboratory—in Massachusetts, defense and other military problems involving ballistic missile defense and offense, radar discrimination, satellite

communication, and identification of underground nuclear tests.

Applied Physics Laboratory—in Maryland, includes research in such areas as naval surface-launched missiles and missile systems and Navy satellite navigation technology.

National Center for Atmospheric Research—in Colorado, problems of social concern involving long-range weather prediction, weather control, and air pollution. Learning Research and Development Center—in Pennsylvania, the scientific study of learning and the development of instructional materials and procedures.

As the needs of the Federal Government have changed, so has the universe of FFRDC's. The most recent additions, for example, include centers created under the sponsorship of the Office of Education to conduct research on modern educational problems and to develop methods to improve the educational process. Changes also occur for reasons that essentially have to do with administrative control, funding level, or primary mission.

Because the identification of FFRDC's is the responsibility of the sponsoring agency, certain problems of uniform identification have developed in the past. As a result, an interagency task force was established on January 10, 1967, by the Committee on Academic Science and Engineering (CASE) of the Federal Council of Science and Technology (FCST) to develop criteria for Government-wide classification of FFRDC's and procedures for maintaining a master listing of these centers. After adopting the new criteria, a master list of FFRDC's was prepared and the name was changed from Federal Contract Research Centers to Federally Funded Research and Development Centers to convey the fact that the activities of the centers involved more than research. The criteria adopted concern all FFRDC's managed by universities and colleges, nonprofit institutions, and industrial firms. The task force defined the types of activity and general organizational structure of an FFRDC and established additional criteria in such areas as management and control, level of Federal support, ownership of facilities, and agency-center relationships.

It was recognized by the interagency task force that FFRDC's administered by institutions of higher education generally fall into two categories. One is the "mission-oriented" center, an organizational subunit that is performing research and development or R. & D. management upon the request of the Government. The other is the "large research facility," an installation that may be a national facility and is staffed so that few, if any, scientific and professional personnel are involved in any teaching or graduate training function.

It was also recognized that, although all the centers have sufficient similar characteristics to identify them all under the single general term FFRDC, they do have in many instances significant differences in terms of management, functions, types of activity, levels of funding, areas of primary emphasis, and of course the sponsoring agencies.

Centers differ also with regard to their emphasis on basic research, applied research, and development. Although data concerning types of R. & D. activities for each center are not available in this study, a recent NSF survey shows that most of AEC's budget for FFRDC's was used in almost equal amounts for basic research and development; of DOD and HEW, largely for applied research; of NASA, mostly for basic research; and of NSF, virtually all for basic research.<sup>1</sup> These data include not only the support of centers sponsored by each agency but also funds for centers sponsored by other agencies. An agency's support for individual centers did not always reflect the same degree of emphasis on type of activity. For example, AEC's Stanford Linear Accelerator Center and the Princeton-Pennsylvania Accelerator are not involved in development activities but are mostly if not exclusively doing basic research, whereas the Los Alamos Scientific Laboratory is doing mostly development.

Another difference among FFRDC's is the practice of some centers, such as the Jet Propulsion Laboratory, to subcontract to industrial firms and other research organizations outside the university sector.

Some FFRDC's continue to carry out mission-oriented work, much of which is classified for security reasons. Others such as the Oak Ridge Associated Universities, which receives most of its Federal support for "other" scientific activities, are assuming many of the characteristics of educational institutions.

Although all of the centers have developed a special relationship with academic institutions, it varies both in degree and kind. It ranges from one which is essentially an administrative-managerial relationship to those involving joint faculty appointments for staff members, programs providing research opportunities, training, facilities, and employment for the faculty and students of co-

<sup>1</sup> National Science Foundation, *Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1967, 1968, and 1969*, vol. XVII, NSF 68-27. Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1968.

operating universities and colleges. Some centers outside the university sector, such as Oak Ridge National Laboratory (managed by an industrial firm), also provide special programs for research and research training for faculty and graduate students from institutions throughout the country.

The implementation of the new criteria led to the deletion of some centers and the inclusion of others. The Apollo Guidance Center at the Massachusetts Institute of Technology, the Naval Arctic Research Laboratory at the University of Alaska, and the Navy Biological Laboratory at the University of California are no longer classified as FFRDC's but are included in this report as part of the parent institutions. The new additions include nine university centers funded by the Office of Education (Department of Health, Education, and Welfare), the Cerro Tololo Inter-American Observatory in Chile sponsored by the National Science Foundation, and the Space Radiation Effects Laboratory funded by the National Aeronautics and Space Administration.

### Federal Science Obligations to FFRDC's, 1967

The 33 FFRDC's managed by universities and colleges received \$908 million in 1967 (table 19). Of this amount, 88 percent was allocated for R. & D. projects related to agency missions; 11 percent, for R. & D. plant and facilities in support of these projects; and the remainder, for "other" science activities.

Among the seven Federal departments and agencies sponsoring university-managed FFRDC's the Atomic Energy Commission accounted for over one-half of the funds obligated in 1967, primarily through its support to three centers: Lawrence Radiation Laboratory (\$175 million), Los Alamos Scientific Laboratory (\$102 million), and Argonne National Laboratory (\$97 million). NASA obligated \$222 million in 1967 to the Jet Propulsion Laboratory, the smallest amount reported since 1963, for its work on projects involving space exploration with unmanned spacecraft. Although this was the largest amount reported for a single university-managed FFRDC, over half of the funds (\$119 million) were transferred to industrial firms holding subcontracts. Together, AEC and NASA accounted for more than four-fifths of all Federal funds obligated to university-managed FFRDC's in 1967.

Of the 33 FFRDC's managed by universities and colleges, 26 were administered by 21 individual universities, six by four consortia, and one jointly

TABLE 19.—Federal obligations to Federally Funded Research and Development Centers administered by universities and colleges, by agency and type of program, 1967

[Thousands of dollars]

Agency	Total obligations	R. & D.	R. & D. plant	Other science
Total, all agencies.....	\$907,549	\$800,798	\$101,755	\$4,996
Atomic Energy Commission.....	510,878	411,377	94,519	4,982
Department of Defense.....	135,992	135,985	7	
Army.....	6,167	6,167		
Navy.....	62,836	62,836		
Air Force.....	66,989	66,982	7	
Department of Health, Education, and Welfare.....				
Office of Education.....	7,859	7,859		
National Aeronautics and Space Administration.....	223,984	221,420	2,564	
National Science Foundation.....	28,836	24,157	4,665	14

by a university and a consortium. The latter is Argonne National Laboratory, administered by the University of Chicago until November 1966, when the terms of a new contract placed it under the joint management of the University and Argonne Universities Association.

All but \$14,000 of the \$5 million in "other" science activities was awarded to FFRDC's engaged in atomic energy programs. The two largest amounts went to Oak Ridge Associated Universities (\$3 million) and Argonne National Laboratory (\$1 million). These funds went chiefly for research training and graduate education.

The \$10 million net decrease in total obligations from 1966 resulted from a rise of \$17 million in research and development and declines of \$26 million and \$1 million in R. & D. plant and other science activities (table 20). Behind these changes in the overall level of funding are several fluctuations in the budgets of individual centers, caused by completion of existing programs and initiation and expansion of new ones. The completion of the 20-bev linear accelerator at AEC's Stanford Linear Accelerator Center in 1966 resulted in a \$26 million drop in R. & D. plant support and an \$8 million rise in R. & D. funds. This rise in R. & D. support was counterbalanced by an \$8 million reduction in NASA's R. & D. support to the Jet Propulsion Laboratory, largely a result of the end of the Surveyor and Lunar Orbiter programs.

Among the FFRDC's showing an overall gain between 1966 and 1967, AEC's Argonne National

TABLE 20.—*Federal obligations to Federally Funded Research and Development Centers administered by universities and colleges, by type of program, 1963-67*

[Millions of dollars]

Program	1963	1964	1965	1966	1967
Total	\$814.1	\$862.4	\$895.3	\$917.6	\$907.5
Research and development	668.9	732.3	744.1	784.2	800.8
R. & D. plant	138.9	122.5	141.7	127.6	101.8
Other science activities	6.4	7.5	9.4	5.8	5.0

Laboratory led with an increase of \$10 million, \$6 million of which was allocated to construct a 12-foot bubble chamber to be used with a zero gradient synchrotron in high-energy physics research.

More than 90 percent of the \$102 million obligated for R. & D. plant was reported for AEC-sponsored centers, with about 78 percent going to Lawrence Radiation Laboratory, Argonne National Laboratory, Stanford Linear Accelerator Center, and Brookhaven National Laboratory. These centers received funds for R. & D. plant ranging from \$16 million to \$25 million.

### Trends in Federal Support—Influence of Largest Centers

For the period 1963-67, total support to FFRDC's grew at an average annual rate of

nearly 3 percent. However, the trend of total Federal obligations to all FFRDC's was heavily influenced by the relatively stable funding of six FFRDC's receiving more than \$60 million each in 1967 (chart 3). This group is composed of Jet Propulsion Laboratory, Lawrence Radiation Laboratory, Los Alamos Scientific Laboratory, Argonne National Laboratory, Lincoln Laboratory, and Brookhaven National Laboratory. FFRDC's combined showed a more rapid rate of growth during the period.

These large centers received \$691 million in 1963 and \$727 million in 1967. The \$36 million increase represents an average annual growth of over 1 percent—a figure well below the nearly 10-percent average annual increase for the other FFRDC's—from \$123 million in 1963 to \$180 million in 1967. It is noteworthy also that these six large centers were in existence throughout the period; the "other" group includes nine centers established after 1963.

Although less than one-fifth of the FFRDC's accounted for more than four-fifths of Federal funds in 1967, it is likely that the next few years will see a continuation of the trend toward a wider dispersion of Federal allocations. As the newly formed centers develop and new ones emerge, they will claim an increasing share of total FFRDC obligations.

## APPENDIX A

### Technical Notes

#### Concepts and Limitations

The dollar amounts shown in this report represent obligations to institutions of higher education incurred by eight Federal agencies. These data reflect actual obligations by the reporting agency during a fiscal year (July 1 to June 30) regardless of when funds were appropriated by Congress or when funds were spent by a recipient.<sup>1</sup> Data on agency obligations for each of the types of activities covered by this report are shown for the entire 1963-67 period; however, geographic data are given for the years 1963, 1966,<sup>2</sup> and 1967 only.

Certain allocations for financial assistance by Federal agencies were excluded from the study, notably repayable loans such as those made by the Office of Education for undergraduate and graduate construction and Federal agency support of employee training and development activities. Obligations were reported in amounts rounded to the nearest thousand dollars.

Amounts in this report represent obligations of funds to universities and colleges, including funds awarded through fiscal or other agents, such as university foundations. Data for individual institutions represent direct support from Federal agencies and do not make allowances for amounts subcontracted to or from other institutions. Consequently, the location of actual performance of obligated amounts cannot be identified if that performance takes place at some site other than that of the institution receiving direct support from Federal agencies. In cases of interagency transfer of funds, the agency that made the final distribution of the funds to academic institutions reported the obligations.

<sup>1</sup> Data for the Atomic Energy Commission were provided in terms of costs rather than obligations but are treated as substantially the same thing in this analysis.

<sup>2</sup> Data on fiscal year 1966 include an element of double counting for certain DOD obligations totaling approximately \$30 million, distributed among 24 universities.

Federal agencies also made grants to an administrative center for a university system made up of several educational institutions at different locations. In many cases, the Federal funds given to the university system filter down to individual institutions. As a result, the amounts reported for such individual institutions may be understated. Since the final allocation of funds is not known at the time the award is made, the agencies report the funds as an award to the "central system."<sup>3</sup> "Central system" obligations in fiscal year 1967 have been reported for the following:

- University and State College of Arizona System
- California State College System
- Peralta Junior College District System
- San Diego Junior Colleges System
- State Center Junior College District System
- University of California System
- Louisiana State University System
- University of Missouri System
- City University of New York System
- State University of New York System
- Union College and University System
- University of North Carolina System
- Texas A. & M. University System
- University of Texas System
- University of Wisconsin System
- Wisconsin State University System
- Mesa County Junior College District System
- Columbia University System
- University of Puerto Rico System

In seven of these university systems, obligations for 1966 and prior years to branches and campuses

<sup>3</sup> In the two previous reports on Federal support to universities and colleges prepared by the National Science Foundation for the Office of Science and Technology, Federal grants to university "central systems" were generally reported as "all campus" grants. Data on Federal obligations to "central systems" are shown in app. table B-4. The two previous reports were: National Science Foundation, *Federal Support for Academic Science and Other Educational Activities in Universities and Colleges, Fiscal Year 1965* (NSF 66-30) (Washington, D.C. 20550), 1966; and *Federal Support to Universities and Colleges, Fiscal Years 1963-66* (NSF 67-14) (Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office), 1967.

of institutions were not shown separately but were included with those for the parent institution. Barnard College of the Columbia University System is an example of one such branch that now has been reclassified to the "institution" level, and as such, funds obligated to Barnard College in 1967 are shown separately. The other six systems include:

- San Diego Junior Colleges System
- Mesa County Junior College District System
- Louisiana State University System
- University of Missouri System
- University of Texas System
- University of Puerto Rico System

For the University of Minnesota the situation was reversed; i.e., the parts of the university that were formerly classified as separate institutions are now considered to be part of the university at the branch level. Consequently, in this report the branch data are summed into one institutional total under the entry, University of Minnesota.

Among the categories of support reported by Federal agencies, amounts shown for individual institutions may not always indicate the way the funds are actually spent by universities or colleges. For instance, the Department of Defense reported its entire obligations to universities and colleges for research and development, although some of the funds were actually expended for plant and facilities.

Some of the obligations by Federal agencies under institutional grant programs for general or special purposes were included under the category "other scientific activities," although actual expenditure of these funds is spread among research and development, R&D plant, and other scientific activities. Again, it is extremely difficult to categorize the purposes for which such funds are expended because of the close functional relationship between research and education.

### **Relationship of the CASE Study to the Federal Funds Series**

Both the CASE study and *Federal Funds for Research, Development and Other Scientific Activities*<sup>4</sup> obtain data on obligations by Federal agencies for research and development and R. & D.

<sup>4</sup> National Science Foundation, *Federal Funds for Research, Development, and Other Scientific Activities, Fiscal Years 1965, 1966, and 1967*, vol. XV, NSF 66-25. Washington, D.C. 20402: Supt. of Documents, U.S. Government Printing Office, 1966.

plant to universities and colleges and their associated Federally Funded Research and Development Centers. The CASE study is oriented toward obtaining information on total Federal support for individual institutions of higher education, while the *Federal Funds* study obtains data on research and development and R. & D. plant obligated by Federal agencies to all sectors of the economy, including universities and colleges. In *Federal Funds* the emphasis is on character of activity and field of science, rather than individual recipients.

In general, there is conformity of concepts and definitions used in the two studies. It should be noted, however, that data showing Federal obligations to universities and colleges compiled in the two studies do not and cannot conform in all respects. Information used in *Federal Funds* is based on the agencies' budgets which, of course, cannot show details on the recipient of funds. Also, since the CASE study covers eight Federal departments and agencies and *Federal Funds* obtains reports on a Government-wide basis, there is a difference representing the amounts obligated to universities and colleges by agencies not in the CASE study.

Among other differences is the fact that the National Institutes of Health reported its General Research Support Grants Program as research and development in *Federal Funds* and "other scientific activities" in the CASE study. Similar reporting differences occurred in the case of the National Aeronautics and Space Administration's Sustaining University Program. The National Science Foundation provided estimates to *Federal Funds* of amounts expended by universities for research and development and R. & D. plant from institution-based grants. For individual institutions of higher education, the allocation of funds from this program differs widely among various categories of support and, consequently, all of the Foundation's obligations for Institutional Grant Programs were reported as "other scientific activities" in the CASE study.

In cases of interagency transfers of funds, the present study instructs the agency that actually obligates funds to an academic institution to report the obligation. This, again, is because the study is oriented toward obtaining information on individual universities and colleges. In *Federal Funds*, on the other hand, agencies initiating the interagency transfers report the obligated amounts.

## Definitions of Terms<sup>5</sup>

*University or college* consists of all parts of the academic institution—such as a college of liberal arts, professional school, hospital, school of agriculture, agricultural experiment station, etc.—except an associated Federally Funded Research and Development Center. Universities and colleges include all institutions of higher education in the United States that offer at least 2 years of college-level studies in residence. Included in this report are institutions listed in the Office of Education's *Education Directory, Part 3, Higher Education*, with the addition of some institutions that have applied for accreditation but have not yet received it. Institutions shown separately in the report are generally thought to possess a significant degree of autonomy with respect to their educational and administrative responsibilities. Thus, universities and colleges organized under systems (e.g., groups of institutions collectively having legal status and generally accorded recognition by a State, by a board of education, or other relevant organization) are shown as separate institutions in cases where significant autonomy exists. Obligations to branches and campuses of institutions are not shown separately but are included in the total for the parent institution. Obligations to service schools by the Department of Defense were excluded from the study.<sup>6</sup> Also excluded were funds awarded to

<sup>5</sup> These definitions of terms were established by the Interagency Task Force of the Federal Council of Science and Technology's Committee on Academic Science and Engineering.

<sup>6</sup> The names and locations of service schools are: Air Force Institute of Technology, Wright-Patterson Air Force Base, Ohio (DOD); U.S. Air Force Academy, Colorado Springs, Colo. (DOD); U.S. Army Command General Staff College, Ft. Leavenworth, Kans. (DOD); U.S. Coast Guard Academy, New London, Conn. (Treasury); U.S. Merchant Marine Academy, New York, N.Y. (Commerce); U.S. Military Academy, West Point, N.Y. (DOD); U.S. Naval Academy, Annapolis, Md (DOD). U.S. Naval Postgraduate School, Monterey, Calif. (DOD).

the U.S. Department of Agriculture Graduate School.

*Federally Funded Research and Development Centers* in this report are organizational units associated with universities and colleges whose creation and operation are not primarily related to the main function of the administering universities and colleges. Generally, these units have been established to meet a particular R. & D. need of a Federal agency. New Government-wide criteria for identifying these centers have been developed by an interagency task force. To be classified as an FFRDC, an organization should:

(a) perform primarily one or more of the following: basic research, applied research, development, or management of research and development. Specifically excluded are organizations engaged primarily in: routine quality control and testing, routine service activities, production, mapping and surveys, and information dissemination.

(b) constitute a separate operational unit within the parent organization or be organized as a separately incorporated organization.

(c) perform actual research and development or R. & D. management either upon direct request of the Government or under a broad charter from the Government, but in either case under the direct monitorship of the Government.

(d) receive its major financial support (70 percent or more) from the Federal Government, usually from one agency.

(e) have or be expected to have a long-term relationship with its sponsoring agency (about 5 years or more), as evidenced by the specific obligations it and the agency assume.

(f) be established in the contract so that most or all of the facilities are owned or funded by the Government.

(g) have an average annual budget (operating and capital equipment) of at least \$500,000.

As a result of the development of uniform criteria in identifying FFRDC's, the list of these centers has been revised since the publication of the last report. Those changes that affect data in this report are shown below:

### Centers merged with administering university

<i>State and name of center</i>	<i>Sponsoring agency</i>	<i>Administering university</i>
Alaska—Naval Arctic Research Laboratory	DOD(Navy)	University of Alaska
California—Navy Biological Laboratory	DOD(Navy)	University of California at Berkeley
Massachusetts—Apollo Guidance Project	NASA	Massachusetts Institute of Technology

## Centers added to list of FFRDC's associated with academic institutions in FY 1967

<i>State and name of center</i>	<i>Sponsoring agency</i>	<i>Administering university</i>
California—Center for Research and Development in Higher Education.....	HEW(OE)	University of California at Berkeley.
California—Center for the Study of the Evaluation of Instructional Programs.....	HEW(OE)	University of California at Los Angeles.
California—Stanford Center for Research and Development in Teaching.....	HEW(OE)	Stanford University.
Georgia—Research and Development Center in Educational Stimulation.....	HEW(OE)	University of Georgia.
Massachusetts—Center for Research and Development in Educational Differences. <sup>7</sup> .....	HEW(OE)	Harvard University.
Oregon—Center for the Advanced Study of Educational Administration.....	HEW(OE)	University of Oregon.
Pennsylvania—Learning Research and Development Center.....	HEW(OE)	University of Pittsburgh.
Texas—Research and Development Center in Teacher Education.....	HEW(OE)	University of Texas.
Virginia—Space Radiation Effects Laboratory.....	NASA	College of William and Mary.
Wisconsin—Center for Research and Development for Learning and Re-Education.....	HEW(OE)	University of Wisconsin.

Chapter V of this report lists 33 FFRDC's. Of these, 26 are administered by specified universities; six are managed solely by university consortia; and one, Argonne National Laboratory, is managed jointly by the University of Chicago and Argonne Universities Association. The institutions comprising the membership of the managing consortia are as follows:

*Associated Universities, Inc.*

Columbia University  
 Cornell University  
 Harvard University  
 Johns Hopkins University  
 Massachusetts Institute of Technology  
 University of Pennsylvania  
 Princeton University  
 University of Rochester  
 Yale University

*Association of Universities for Research in Astronomy, Inc.*

University of California  
 University of Chicago  
 Harvard University  
 Indiana University  
 University of Michigan  
 Ohio State University  
 Princeton University  
 University of Texas  
 University of Wisconsin  
 Yale University

*University Corporation for Atmospheric Research*

University of Alaska  
 University of Arizona  
 University of California  
 University of Chicago  
 Colorado State University  
 University of Colorado  
 Cornell University  
 University of Denver

*University Corporation for Atmospheric Research—Con.*

Florida State University  
 University of Hawaii  
 Johns Hopkins University  
 University of Maryland  
 Massachusetts Institute of Technology  
 University of Michigan  
 University of Minnesota  
 New York University  
 University of Oklahoma  
 Pennsylvania State University  
 St. Louis University  
 Texas A. & M. University  
 University of Texas  
 University of Utah  
 University of Washington  
 University of Wisconsin

*Oak Ridge Associated Universities*

University of Alabama  
 University of Arkansas  
 Auburn University  
 Catholic University of America  
 Clemson University  
 Duke University  
 Emory University  
 Fisk University  
 University of Florida  
 Florida State University  
 University of Georgia  
 Georgia Institute of Technology  
 University of Kentucky  
 Louisiana State University  
 University of Louisville  
 University of Maryland  
 Medical College of Virginia  
 Meharry Medical College  
 University of Miami  
 University of Mississippi  
 Mississippi State University  
 University of North Carolina

<sup>7</sup> This center was discontinued as of July 1, 1967

*Oak Ridge Associated Universities*—Continued

North Carolina State University  
North Texas State University  
University of Oklahoma  
University of Puerto Rico  
Rice University  
University of South Carolina  
Southern Methodist University  
University of Tennessee  
University of Texas  
Texas A. & M. University  
Texas Christian University  
Texas Women's University  
Tulane University  
Tuskegee Institute  
Vanderbilt University  
University of Virginia  
Virginia Polytechnic Institute  
West Virginia University  
College of William and Mary

*Argonne Universities Association*

Carnegie-Mellon University  
Case Western Reserve University  
Illinois Institute of Technology  
Indiana University  
Iowa State University

University of Missouri  
University of Notre Dame  
University of Wisconsin  
Washington University (St. Louis)  
Wayne State University

*Academic science* includes the sum of activities classified under three categories: research and

development, R. & D. plant, other science activities. Each of these categories is defined below.

*Research* is defined as scientific inquiry. It includes basic studies—those oriented toward deeper or more meaningful understanding and knowledge per se in a particular subject or field—and applied studies—those aimed at new or more complete knowledge in the light of potential practical application.

*Development* is the systematic use of scientific knowledge directed toward the production of useful materials, devices, systems, or methods, including design and development of prototypes and processes. It excludes quality control, routine product testing, and production.

*R. & D. plant* includes all direct, indirect, incidental, or related costs resulting from or necessary to the construction of, acquisition of, major repairs to, or alterations in structures, works, fixed equipment, facilities, or land for use in scientific research and development at a university or college, or at a Federally Funded Research and Development Center. Fixed equipment includes accelerators, reactors, wind tunnels, radio telescopes, etc.

*Other academic-science activities* represent obligations for all other activities that are science-related but not included elsewhere. Included are obligations to a university or college that represent direct funding (excluding repayable loans) of science-related activities for purposes such as scholarships, fellowships, traineeships, institutes, course-content improvement projects, and other science education pursuits; facilities and equipment to be used primarily for education activities; collection, storage, handling, and dissemination of scientific and technical information; and institutional grants for general or specific purposes.

*Nonscience activities* include all support of fields of endeavor at universities and colleges other than those specified as academic science.

## APPENDIX B

### Statistical Tables

<i>Table</i>	<i>Page</i>
B-1. Total Federal obligations to 100 universities and colleges receiving the largest amounts, 1967-----	52
B-2. Federal obligations to 100 universities and colleges receiving the largest amounts, by type of program, 1967-----	54
B-3. Federal obligations for academic science to 100 universities and colleges receiving the largest amounts, by agency, 1967-----	56
B-4. Total Federal obligations to all universities and colleges, by State, institution, and agency, 1967-----	58

TABLE B-1.—Total Federal obligations to 100 universities and colleges receiving the largest amounts, by agency, 1967

[Thousands of dollars]

Institution	State	Total	Agriculture	AEC	Commerce	DOD	HEW	Interior	NASA	NSF

\* Two-year institution, as designated by the Office of Education.

† Administrative center for the university systems. The Central Systems listed in the table represent funds going to part of a university system, such as a graduate center, that encompasses the teaching and research activities of a number of institutions

that form the system. In addition, in some cases, the funds shown for the Central System may be distributed eventually to institutions that are part of the system.

‡ Main university only.
