ED 250 124

RC 015 006

**TITLE** Rural Transportation in New York State: A Preliminary Report.

**INSTITUTION** New York State Legislative Commission on Rural Resources, Albany.

**PUB DATE** 10 Nov 83

**NOTE** 28p.; One of nine reports from the Statewide Legislative Symposium on Rural Development (1st, Albany, NY, October 5-7, 1983). For the other reports from this Symposium, see RC 015 005-013.

**PUB TYPE** Legal/Legislative/Regulatory Materials, (090) -- Collected Works - Conference Proceedings (021)

**EDRS PRICE** MF01/PC02 Plus Postage.

**DESCRIPTORS** Costs; Local Issues; Long Range Planning; Maintenance; Needs Assessment; Objectives; Policy Formation; Problems; \*Public Policy; Road Construction; Rural Areas; \*Rural Development; \*Rural Urban Differences; State Surveys; \*Statewide Planning; Tables (Data); \*Transportation; \*Trend Analysis

**IDENTIFIERS** Goal Setting; \*New York

**ABSTRACT**

The report catalogs strengths, defines problems, and establishes goals for the next two decades for rural New York in the area of transportation. Describing where rural New York is today, section one lists 12 trends, 8 strengths, and 16 weaknesses affecting transportation. Trends include increased rural population inflow and demands on local planners, switch in road emphasis from building to maintenance, and growth of regional transportation hubs and markets. Strengths include extensive road networks, rail lines, waterways, ports, airports, and terminal facilities; responsive maintenance forces; and accountable systems of local government. Problems include overdevelopment, use of obsolete technologies, inappropriate funding mechanisms, and absence of rural input in decision making. Section two presents 13 goals, including training local officials to make wise use of transportation funds, making railroads profitable, enforcing weight limits, and encouraging use of inland water systems. Section three outlines public policy questions including incompatibility of federal, state, and local regulations and replacement of disappearing federal transportation funds. A summary statement, list of workshop participants, and appended data showing cost of road neglect, means of transportation and travel time to work, and vehicles per household complete the report. # RURAL FUTURES

LEGISLATIVE COMMISSION ON RURAL RESOURCES  
STATE OF NEW YORK  
(518) 455-2544

The Commission on Rural Resources was established by Chapter 428 of the Laws of 1982, and began its work February, 1983. A bipartisan Commission, its primary purpose is to promote a state-level focus and avenue for rural affairs policy and program development in New York State.

The Commission provides state lawmakers with a unique capability and perspective from which to anticipate and approach large-scale problems and opportunities in the state's rural areas. In addition, legislators who live in rural New York are in the minority and look to the Commission for assistance in fulfilling their responsibilities to constituents.

The Commission seeks to amplify the efforts of others who are interested in such policy areas as agriculture; business, economic development, and employment; education; government and management; environment, land use, and natural resources; transportation; housing, community facilities, and renewal; human relations and community life; and health care. It seeks to support lawmakers' efforts to preserve and enhance the state's vital rural resources through positive, decisive action.

In order to obtain a clearer picture of key problems and opportunities, the Commission invited people to informal discussions at a Statewide Rural Development Symposium, held October 5-7, 1983. It was the first such effort of its kind in the state and nation. Workshop participants undertook in-depth examinations of key policy areas the Commission believed were critical to the state's future rural development.

Symposium participants focused their discussions on ends, not means. In short, the objective was to identify key trends, strengths, weaknesses, goals, and opportunities for advancement; not to present solutions. Once a clearer picture of these findings is drawn, the next step will be to identify and propose the required, and hopefully innovative, recommendations. This task will be the subject of a second, follow-up symposium. Another unique feature of the first symposium was the opportunity it provided participants to share their thinking with colleagues from throughout the state over a three-day period of intensive dialogue.

The Commission is happy to announce that the objective of the Symposium was accomplished. Preliminary reports, based on the findings, are being issued as planned, in connection with a series of public hearings it is sponsoring across the state. The aim of these hearings is to obtain public commentary on the preliminary reports. Following these, a final symposium report will be prepared for submission to the Governor and the State Legislature. It will also serve as a resource report for the second statewide symposium on recommendations.

The Commission is comprised of five Assemblymen and five Senators with members appointed by the leader of each legislative branch. Senator Charles D. Cook (R.-Delaware, Sullivan, Greene, Schoharie, Ulster Counties) serves as Chairman. Assemblyman William L. Parment (D.-Chautauque) is Vice Chairman and Senator L. Paul Kehoe (R.-Wayne, Ontario, Monroe) is Secretary. Members also include: Senator William T. Smith (R.-Steuben, Chemung, Schuyler, Yates, Seneca, Ontario); Senator Anthony M. Masiello (D.-Erie); Senator Thomas J. Bartosiewicz (D.-Kings); Assemblywoman Louise M. Slaughter (D.-Monroe, Wayne); Assemblyman Michael McNulty (D.-Albany, Rensselaer); Assemblyman John G.A. O'Neil (R.-St. Lawrence); and Assemblyman Richard Coombe (R.-Sullivan, Delaware, Chenango).

New York State Legislative Commission on Rural Resources □ Senator Charles D. Cook, Chairman

## PREFACE

The Legislative Commission on Rural Resources publishes herein one of nine preliminary reports from the First Statewide Legislative Symposium on Rural Development held October 5-7, 1983. Not only was this effort a "first" for New York State, but for the nation as well.

The purpose of the Symposium, and the public hearings that will follow, is to catalog the strengths of Rural New York, to define its problems, and to establish goals for the next two decades. Neither the Symposium nor the hearings will deal with strategy to develop our resources; address our problems, or accomplish our goals. That will be the thrust of a later Commission effort.

For the moment, it is our purpose to foster as objectively and exhaustively as possible, an understanding of where we are and where we want to go.

The Symposium reports in each subject area encompass the oral and written findings of the respective workshops, along with responses given at the Commission hearing where the reports were presented to State legislators for comment and discussion. Incorporated into this preliminary report is subsequent comment from group participants on points they felt needed amplification. Also appended to the published product is basic resource material intended to clarify points made in the reports.

I wish to personally congratulate the Symposium participants on the very sound and scholarly documents they have produced. However, their work is only preliminary to the final product which will be issued by the Commission once the hearing process is complete.

Those who read this report are urgently invited to participate in the public hearings that will be held throughout rural New York, or to submit comments in writing to the Commission. Your support, disagreement or commentary on specific points contained in the Symposium report will have a strong influence on the final report of the Commission.

Please do your part in helping to define sound public policy for rural New York during the next two decades.

Senator Charles-D. Cook

Chairman

Legislative Commission on Rural Resources

## INTRODUCTION

Transportation is vital to the future development of rural New York. It enhances the economy, improves productivity, and provides personal access to essential human services. In addition, transportation has greatly influenced the pattern of rural development and settlement throughout New York State's history.

The current physical transportation network includes an extensive road network, rail lines, waterways, ports, airports, and terminal facilities. Present trends in telecommunication technology will complement, or possibly even compete with existing transportation modes. Conceivably, an increasing number of people will not need to travel as much as they do now in order to engage in certain business or personal activities. Energy costs still play a major role in the overall picture for transportation in rural areas, and should be considered in public policy decisions.

The future effectiveness of transportation in rural New York will hinge upon the ability and initiative of both the public and private sectors to develop avenues for the cost-effective delivery of goods and services, as well as an increased capacity for personal mobility. At present, the current road system, built through a federal, state, and local government partnership, is the dominant force in rural transportation. It is expected that this will remain the primary mode for the near future.

The guarantee of mobility to rural residents is a major public policy question that requires further discussion. Symposium participants debated whether a minimum standard of mobility should be provided rural residents and the Commission seeks additional commentary on this question.

## WHERE RURAL NEW YORK IS TODAY

### Trends

- Increased population inflow.
- Increased demands on local planners.
- Switch in road emphasis from building to maintenance.
- Growth of regional transportation hubs.
- Deregulation and debate over possible re-regulation.
- Growth of regional markets.
- Increased size and weight of vehicles (farm equipment and motor carrier vehicles).
- Increase in piggyback usage out of urban hubs (currently, the extent of rural participation in this trend is unknown).
- Increased risk of liability to municipalities.
- Reduction in purchasing power of money for road maintenance.
- Growth of multi-modal approaches to providing transportation.
- Telecommunications as an aid to, but also competitor to transportation.

### Strengths and Assets

- Well-developed road network.
- Responsive maintenance forces.
- Professional cadre at State Department of Transportation.
- Options provided by a multimodal network connecting urban and rural users: rail, water, air, as well as highways.
- Geographic advantage of location: east-west corridors; possibility of greater development of a north-south traffic flow.
- Land space which is already accessible through rural road systems.
- Service providers (reasonably good air service to rural areas, or to urban hubs serving rural areas; well-developed motor carrier industry;

resurgence of Conrail through capital investment and new management approaches; availability of intercity bus; in some areas, a social-service mobility network; regional rail carriers which have filled in to some extent, on Conrail abandonments).

- System of local government which can be held accountable for provision of service.

### **Weaknesses and Problem Areas**

- Some aspects of the transportation infrastructure may be overdeveloped from the standpoint of shifting economic use, inability of local governments to maintain the asset, and lack of future potential.
  - Some very unused rural roads might well be left to be maintained by private interests;
  - Shifting industry needs leave certain rail lines unprofitable and subject to abandonment, unless community support is found;
  - Low usage of intercity buses may result in abandonments of service in some areas;
  - Declines in use of the more remote rural airports.
- Increasing needs among the transportation disadvantaged to get to social services, nutrition programs, and special education. Currently, waste and duplication may exist in individual social service agency budgets trying to cope with the problem.
- Difficulties encountered by the local planning process as it tries to differentiate its delivery service from that of an urban-dominated strategy:
  - Fixed-route, regular schedule bus service may be totally inappropriate for solving special mobility problems;
  - Federal and state highway building standards may require more extravagant approaches to highway maintenance and capital building than are necessary;
  - Lack of support for long-term investment in coordination of mobility programs;
  - Liability trends which impose undue burden on local governments for providing road access, especially during inclement weather;
  - Lack of available funds to enable professionals at the New York State Department of Transportation to gather data on the condition of local roads.

- Decision making which takes place outside of rural areas which nevertheless controls the development of transportation in those rural areas.
- Poor road condition in economically important, but lightly traveled road systems.
- Inadequate bridges: conflict between aging capital stock and increased weight of vehicles and loads given new technologies in trucking and farming; incomplete understanding of which bridges are or should be weight-posted; selective, inconsistent attitude toward enforcement of load-limits.
- Uneven quality of the professionals responsible for transportation infrastructure in rural areas; nonuniform standards; lack of uniformity of credentials.
- Diversion of funds from transportation to other social purposes in local budgets (here the problem was noted, but there was disagreement on its significance).
- Lack of public transportation (here the problem was noted, but there was disagreement on the extent to which the state had any responsibility to provide for personal mobility in rural areas).
- Poor intermodal connections which would benefit rural system users: bus terminals not adjacent to rail stations; congestion at piggyback ramps, inadequate investment in port facilities. Even though the corrective action must be taken in urban areas, the rural areas will benefit.
- Uncertainties surrounding deregulation: data to date show no major problems from motor carrier or airline deregulation, but concern for the future monitoring of it was expressed.
- Use of obsolete or non-cost effective technologies:
  - Base-recycling technology could reduce road maintenance costs;
  - Timely repair saves the "hidden tax" of higher motor carrier operating costs;
  - Shipper ignorance of the possible advantages of intermodal moves;
  - Duplication and wasteful approaches to social service transportation.
- Existing disparities between local jurisdictions, in proportion to the percentage of local budgets spent on transportation (e.g., rural areas may spend a larger percentage of their budgets on road maintenance).
- Lack of public education on the subject of transportation alternatives.

- Inappropriate funding mechanisms:
  - CHIPS formula based on centerline miles and population;
  - Categorical funding from federal and state sources which can lead to irrational choices;
  - Lack of incentives for cost-containment;
  - Overlooking public investment in ports where return on investment in the long-run may be good.
- Threat of rail abandonments which would result in adverse community impact. Possible loss of intercity bus service where needed.

### GOALS FOR RURAL NEW YORK

- State D.O.T. should be responsible for periodic inventory of the entire road system to ascertain condition, and make comparative regional analysis.
- Training to sharpen skills of local officials so that they can make wise allocation of funds for road and bridge maintenance, understand options, and provide feedback to monitor the system.
- There was an intense debate which could not be resolved over whether there should be a minimum standard of mobility to ensure that rural residents have access to social services, shopping, etc. Many felt this would be prohibitively expensive; others felt that a commitment to a minimum standard was necessary to provide an equitable community access.
- Introduce strategic planning where longer funding cycles could permit long term planning and construction geared to life cycle replacement; there is a need to prioritize on the basis of greatest use and poorest condition of the infrastructure.
- Exploit economies of scale in the organization and deployment of public maintenance at the local level (some districts are too small).
- Create efficient intermodal interfaces.
- Upgrade ports to make maximum cost-effective use of port and water facilities.
- Help railroads to be profitable and rebuild where traffic and technology warrant.
- Complete enforcement of weight limits.

- Sharing of cost of "feeder" road network between different levels of government.
- Encourage more education and informational exchange for local citizenry and, additionally, the introduction of up-to-date transportation options into both junior high and high school curricula.
- Encourage greater commercial as well as recreational use of inland water systems (including definite upgrading of the New York State Barge Canal which is long overdue).
- Repair producer to consumer market roads where economically defensible.

#### PUBLIC POLICY QUESTIONS TO BE ADDRESSED

- Guaranteeing mobility to rural residents (open debate). At the hearing which concluded the Symposium, some State legislators were in agreement that transportation-disadvantaged people be provided access to vital services. Specifically, they felt any absence of personal mobility for senior citizens in rural areas should be addressed.
- Investment mix of public dollars into highways, rail, water, air, etc.
- Make highways and feeder roads the primary emphasis in rural transportation.
- Guarantee of access to all parcels of land versus a program to make road and bridge abandonment occur in very remote rural areas.
- Continue CHIPS formula or replace it with priority funding of maintenance on the economically justified roads (workshop group leans heavily toward latter, with DOT making study as preliminary step).
- Revise AASHTO standards on road building and maintenance where local conditions warrant.
- State purchase of lands to facilitate road and bridge abandonment in very remote areas (explore other states' approaches, e.g., Illinois).
- Priority assessment of bridges; declaration of impossibility of repairing them all.
- Issue of incompatibility of federal, state, and local regulations in provision of public transportation and social service transportation coordination:
  - Incompatibility of UMTA regulations for 16 (b) 2 Section 18 programs for areas such as Madison County, which are ready at the local level to coordinate transportation;

- Lack of long-term funding for coordination out of Section 18 monies;
  - Need to reanalyze the adequacy of existing incentives for coordination, and create new ones where necessary;
  - Reluctance of many rural counties to "fight the bureaucratic battles" necessary to win Section 18 funding (planning requirements are too great).
- Need for state program to replace disappearing federal funds for transportation.

## SUMMARY

The Commission believes that interventions in natural evolutionary processes can be used by decisionmakers to achieve community goals and diminish the likelihood of serious collisions with undesirable trends. Still more important than individual problems and opportunities, however, are those positive efforts that will be designed to meet new challenges. Only through a concerted undertaking by many diverse interests will the people of the State be the victors over changes that are being experienced by rural New York.

There are societal and local trends which are influencing such key policy areas in rural New York as agriculture, community life, health care, transportation, natural resources, education, and community facilities. The momentum behind the population shifts occurring across America and in New York State, for example, may well be the most powerful engine of economic, social, and political change in the state. Yet, even this trend could change and, therefore, should be viewed as a tentative assumption about the future environmental context for decisionmaking. Continued monitoring of current trends by lawmakers, government and business officials, academics, and private citizens will provide additional insights that will serve as a catalyst for continued discussion and action on key public policy questions.

## TRANSPORTATION WORKSHOP PARTICIPANTS

### Moderator:

Assemblyman William L. Parment

### Facilitator:

David Walsh  
Local Government Analyst  
New York State Senate Research  
Services

### Resource Person:

Alice Kidder  
Senior Research Associate  
Syracuse University

### Recorder:

Peter Lopez  
Program Analyst  
Commission on Rural Resources

### Participants

Donald F. Bishop, II  
Executive Director  
The A. Lindsay & Olive B. O'Connor  
Foundation

Richard J. Brown  
Executive Secretary-Treasurer  
New York State Association of Town  
Superintendents of Highways, Inc.

Viola Burrough - Observer  
Senior Administrative Assistant  
Senator L. Paul Kehoe

W. Stearns Caswell  
Director of Planning & Research  
Bureau  
New York State Department of  
Transportation

Ray B. Chambers  
President, RBC Associates

Donald S. French  
Deputy Director, Port of Oswego  
Authority

William F. Hagan  
County Administrator  
Greene County

Gary Hayes  
Executive Director, Central New York  
Regional Planning & Development Board

Lynne Irwin  
Associate Professor, Agricultural  
Engineering  
Cornell University

Eric Nissen
