#### Abstract

This evaluation report describes and assesses a compensatory education delivery syste in the school district of Saginaw, Michigan. Three reading and math programs, for selected grades between grade 1 and grade 9, had the following goals: (1) to provide intensive academic instruction to the educationnily disadvantaged; (2) to involve parents in the program; (3) to supply students with incentives for academic improvement; (4) to operate staff inservice programs; (5) to measure academic growth; and (6) to prepare students to effectively meet the academic competition of the general classroom. The 1986-87 delivery system showed a decreese from the previous year in the percentage of participants who achieved grade level in reading. There was some improvement in the percentage who achieved grade level in math. The overall results remained strong. The following recommendations were made: (l) comunications should be improved among all involved in compensatory education programs; (2) there must be more inservice activities; (3) there must be graater recognition and rewards for excellence for both students and teachers; (4) student cesting and selection procedures must be improved; and (5) efforts must be made to reduce variations in the program between building sites. Statistical data are presented in four tables and three appendices. (VM)

## PROGRAM DESCRIPTIOA

The School District of the City of Saginaw operated a compensatory education delivery systen in reading and mathematics consisting of three programs--Elementary Academe Achievement ( $A^{2}$ ), Secondary Academic Achievement ( $A^{2}$ ), and the Prevention Program ( $P^{2}$ ). The elementary $A^{2}$ was a pull-out program (periodically taking students out of regular classrooms) that involved approximately 2,029 students ingrades one through six. The secondary $A^{2}$ was a self-contained classioom program that involved 382 students ingrades seven through aine. Tbe $A^{2}$ program was the primary compensatory education delivery system as it was the older, more well-established and larger of the delivery systems. It was funded by both the federal education Consolidation and Improvement Act (ECIA) Chapter land article 3 of the State School Aid Act.
$p^{2}$ was a program that operated in regular classiooms with atudent teacher ratios of approximately 13 to 1. During this, the third year of the three year pllot effort, the program served some 202 youngsters ingrades two through four. $p^{2}$ classrooms were housed at four elementary school sites (Nelle Haley, Heavenrich, Longfellow, and Jessie Rouse). It was funded by both ECIA Chapter 1 and General fund.

Sumarized in the chart below are demographic characteristics that describe both the elementary and secondary levels of $A^{2}$ and elementary $\mathrm{F}^{2}$ in greater detail.

## DEMOGRAPHIC CHARACTERISTICS OF THE ACADEMIC ACHIEVEMEHT AND PREVEATION PROGRAMS

As can be seen from the chart above, the primary purpose of the programs was to improve the reading and mathematics achievement of a designated number of educationally disadvantaged children. The children in the program were screened for entry with the California Achievement Tests (CAT). This year approximately 2,613 pupils participated in the compensatory education programs. A count of students by building, grade, and funding source can be found in Appendix $A$.

The broad goals of these programs are to: 1) provide intensive academic instruction to the educationally disadiantaged, 2) involve parents in the program, 3) supply students with incentives for academic improvement, 4) operate staff inservice programs, 5) measure academic growth, and 6) prepare students to effectively meet the academic competition of the general classroom. These zoals are the focus of the Compensatory Educaifinn Departmenters activities throughout the $1986-87$ school year.

## PROCEDURES FOR EVALUATION

Both process and product evaluations were undertaken for the compensatory education delivery system consising of $4^{\mathbf{2}}$ and $\mathrm{P}^{\mathbf{2}}$. This year's process evaluation was accomplished by distributing and analyzing a set of needs assessment questionaires which were shared with all compensatory education teachers, a sample of regular education teachers, and each principal at the compensatory education buildings. The instruments were distributed to the respondents on December 4, 1986. Completed instruments were last received from respondents on January 19, 1987. The results of this process needs assessment were presented in a separate report published and ifsaminated earlier in the year.

The product evaluation, which is the focus of this report, addresses the results of student test performance. The California Achievement Tests ( CAT ) for grades $1-9$ served as the evaluation instruments. These tests were administered cna pretest basis in the Spring, 1986 (CAT Form-C) and on a post-test basis in Sprirg, 1987 (CAT Form-E). These two forms wers used and equated.

Mean pre- to post-test score comparisons were used to evaluate the effectiveness of the delivery systems. The agreeu upon standard was an improvement of post-test over pre-test percentile scores. The reading and then the mathematics results for the entire compensatory education's delivery system ( $A^{2}$ and $p^{2}$ combined) will be presented. Following that will appear the fert score results separately.

## PRESEATATIOA ARD ANALISIS OF DATA: PRODUCT

The primary goal of compensatory education was to increase reauing and mathematics achievement. The data presented in this section wiil indicate the extent to which this goal was achieved. Reading and then mathematics data by grade are presented below. These results are followed by a comparison of the outcomes for $p^{2}$ in both subjects. The achievement results by school are presented In Appendix B.

## Product Data: Reading

The pre- and post-test results for reading are presented in Table 1. These data reflect the impacts of both $A^{2}$ and $p^{2}$ programs combined.

TABLE 1. ATPAMMEAT OF TRIE PRROMAYCE STANDARD IN READING IN PERCENIILE SCORES FOR COAPEASATORY EDUCATION PARTICIPANTS, GRADES 1-9.

| Spring to Spring Comparisons by Grade | Number of Students <br> Pre- and PostTested | Percentile |  |  | Performance Standard* Attained |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Pre <br> Mean | Post Mean | Mean Gain |  |
| 1 | 56 | 2.2 | 34.0 | 31.8 | Yes |
| 2 | 289 | 7.6 | 18.9 | 11.3 | Yes |
| 3 | 310 | 14.6 | 23.8 | 9.2 | Yes |
| 4 | 304 | 17.5 | 23.1 | 5.6 | Yes |
| 5 | 253 | 16.8 | 19.5 | 2.7 | Yes |
| 6 | 339 | 13.9 | 20.3 | 6.4 | Yes |
| 7 | 77 | 13.1 | 10.4 | - 2.7 | No |
| 8 | 100 | 6.7 | 9.0 | 2.3 | Yes |
| 9 | 69 | 7.3 | 8.3 | 1.0 | Yes |

*Post-test percentile scores will evidence improvement over pre-test percentile scores.

A study of the seading results show that students met the performance standard at all grades except seven. At the seventh grade Ievel, the scores indicated an average loss of - 2.7 percentile uts between pre-and post-testings. At grade one, the larges gain (31.8 percentile points) was recorded. See Appendix B for the test results by building and funing source.

## Product Data: Mathematics

Table 2 below presents the attainment of the performance standard for spring to spring data in mathematics. The data refleit the efforts of both $A^{2}$ and $P^{2}$ programs.

TABLE 2. ATTALMENT OP THE PEPROMAECE STANDARD IM MATBEMATICS IN PRECEITLE SCORES FOR COMPLASATORY BDUCATIOM PARTICIPAUIS, EADES 1-9.

| Spring to Spring Comparisons by Grade | Number of Students Pre- and PostTested | Percentile |  |  | Performance Standard* Attained |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Pre Mean | Post <br> Mean | Mean Gain |  |
| 1 | 44 | 10.6 | 57.6 | 47.0 | Yes |
| 2 | 203 | 18.6 | 35.2 | 16.6 | Yes |
| 3 | 279 | 17.9 | 35.1 | 17.2 | Yes |
| 4 | 219 | 25.6 | 30.3 | 4.7 | Yes |
| 5 | 196 | 16.2 | 32.8 | 16.6 | Yes |
| 6 | 195 | 17.9 | 39.0 | 21.1 | Yes |
| 7 | 46 | 6.1 | 13.7 | 7.6 | Yes |
| 8 | 65 | 9.2 | 10.6 | 1.4 | Yes |
| 9 | 45 | 6.6 | 8.4 | 1.8 | Yes |

[^1]A review of mathematics results reveals that students met the performance standardinall grades. The gain score at the first grade level, indicated the largest improvement (47 percentile points) between pre- and post-testings. At the eighth grade, the smallest percentile gain ( 1.4 points) was observed. See Appendix B for the test results by building and funding source.

## Product Data: Prevention Progran (P2)

Table 3 below presents the pre-to post-test results for $p^{2}$ pupils in both reading and mathematics.
table 3. attaimerer of tar preporhance stardard in reading AID MATHEMATICS POR PRENEMTIOM PROGRAM PARTICIPAITS, GRADES 2-4.

| Spring to Spring Comparisons by Subject Area and Grade | Number of Students Pre- and PostTested | Percentile |  |  | Performance Standard* Attained |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Pre <br> Mean | Post Mean | Mean <br> Gain |  |
| Reading |  |  |  |  |  |
| 2 | 66 | 6 | 22 | 16 | Yes |
| 3 | 69 | 18 | 33 | 15 | Yes |
| 4 | 58 | 17 | 21 | 4 | Yes |
| Mathematics |  |  |  |  |  |
| 2 | 66 | 24 | 40 | 19 | Yes |
| 3 | 69 | 27 | 49 | 22 | Yes |
| 4 | 58 |  |  |  | No |

*Post-test percentile scores will evidence improvement over pre-test perceutile scores.

An examination of Table 3 reveals that the performance standard was attained in both reading and mathematics at all three
grade levels except for grade 4 in mathematics. See Appendix C for test results by building and grade.

Table 4 below presents the pre-t^ post-test results for $\mathrm{p}^{2}$ pupils contrasted with an $A^{2}$ comparisongroup of pupils in reading and mathematics. The comparison group was randomly selected from similar $A^{2}$ buildings at the beginaing of the school year. A $t-$ test showed no significant differences ( $\mathcal{X}=.05$ ) between the pretest means by grade.

TAR-\& 4. mean percentile gain of prevention pupils versus a comparison group of pupils II READING AND MATHEMATICS BASED ON APRIL-HAY, 1986 PRETESTING AND APRIL-HAY, 1987 POST-TESTIIG ON CAT (SPRING TO SPRING).

As can be seen in Table 4 , all mean percentile gains were greater than zero except for $P^{\mathbf{2}}$ at grade 4 in mathematics (mean. gain $=-1$ percentile). Thus the comparison group in terms of the standard that post-test percentile scores will evidence improvement over pretest percentile scores showed one more positive mean gain ( 6 of 6 cells or 100\%) than the experimental $\mathbf{p}^{2}$ group ( 5 of 6 cells or 83.3\%).

The evaluation design for testing differences between experimental $P^{2}$ and $A^{2}$ Chapter 1 students was strengthened this year by adding a randoaly selected comparison group of $A^{2}$ participants. As with the previous year, the "rule of ten" was employed as a me stringent standard of performance. The riule of ten" helps answer the question of how big a difference is needed before two group averages can be considered meaningfully different. The rule states that if a ten point difference between two group averages expressed in national percentile (NP) units is observed, it may then be concluded the difference is large enough to be meaningful.

The chart below presents the mean gain differences between experimental $p^{2}$ and the comparison $A^{2}$ groups, i.e., $p^{2}$ mean $N P$ gain - $A^{2}$ mean $N P$ gain $=$ mean $N P$ gain difference of $P^{2}$.

Mean $N P$ Gain Difference of $P^{2}-A^{2}$

|  | Grade 2 | Grade 3 | Grade 4 |  |
| :--- | ---: | ---: | ---: | ---: |
| Reading | 7 |  | 12 | 0 |
| Mathematics | 16 |  | 11 | -12 |

[^2]A perusal of the chart in light of the above 10 or more point standard for meaningful difference in terms of $\mathrm{p}^{\mathbf{2}}$ indi-. cates that three of the $s i x$ cells (grade 2 mathematics and grade 3 reading and mathematics) show $p^{\mathbf{2}}$ to have superior performance as compared to the $A^{2}$ comparison group. The other three cells (grade 2 reading and grade 4 reading and mathematics) show no meaningful difference in favor of $P^{\mathbf{2}}$. In fact, $A^{\mathbf{2}}$ out gains $\mathrm{p}^{\mathbf{2}}$ in matheatics at grade 4 by 12 percentile points.

Overall, during the three years of piloting, the prevention Program ( ${ }^{2}$ ) does not appear to produce consistent positive results to justify continuing its implementation. The need for stronger controls on the nature of the program seemed evident from the start. Given the programes additional costs and lack of consistent and sizeable gains over the $A^{2}$ program, it seems unwaranted to continue this pilot.

## SUMMART AED CORCLOSIONS

The Chapter 1 and Article 3 Academic Achievement ( ${ }^{2}$ ) and Prevention Program ( ${ }^{\mathbf{2}}$ ) were designed to provide direct instructional services in reading and mathematics to some 2,613 students in grades one through nine. The main intent of the $A^{\mathbf{2}}$ and $p^{\mathbf{2}}$ programs was to improve the pupil's reading and/or mathematics achfevement. Instruction occurred primarily in small group settings outside of the regular classioonfor $A^{2}$ at the elementarg level, and in a regular classioom setting with a reduced number of students for $A^{2}$ at the secondary level and $P^{2}$ in grades 2-4.

The 1986-87 compensatcry education delivery system showed a decrease from the previous year in terms of the percentage of grade levels meeting the standardin reading while the results improved in mathematics ( $100 \% \mathrm{vs} .89 \%$ in reading and $89 \% \mathrm{ve} .100 \%$ in mathematics for 1985-8S and 1986-87 respectively). Overall, $A^{2}$ results remain strong. Positive student achievement gains were realized again this year.

The $P^{\mathbf{2}}$ pilot showed an increase from the previous year in terms of the percentage of grade levels meeting the standardin reading while the results showed a decrease in mathematics ( $67 \%$ vs. $100 \%$ in reading and $100 \%$ vs. $67 \%$ in mathematics for $1985-86$ and 1986-87 respectively). A special analysis of $\mathrm{p}^{2}$ compared to an $A^{\mathbf{2}}$ comparison group showed that $P^{\mathbf{2}}$ showed meaningful differences in three of the six ( $50.0 \%$ ) possible comparisons with $A^{2}$. This would seem to indicate that the pilot of $\mathrm{P}^{\mathbf{2}}$ should be stopped because of the absence of consistent positive results over the course of the three year $\mathrm{p}^{2}$ pilot.

The results of the pre- to post-testing of compensatory education students indicate that overall the greatest gains in reading were made at the first grade level, but that all grades attained the performance standarj except grade 7. Mathematics gains were again the greatest at grade l, but all grades met the standard.

As mentioned earlier, a process evaluation report was completed this year and is available from the Department of Evaluation, Testing and Research. The findings from that report as well as those cited above were used in helping develop the recomendations that folled.

## RECOMHENDATIONS

Based on this year ${ }^{-1}$ process and product evaluations and a meeting with the program director, the following recommendations are offered in an effort to improve the implementation of the $A^{2}$ program for 1987-88.

1. Further improve conmunications between all individuals invoived in the compensatory education effort. A number ofessential elements are needed.

- A more detalled written plan of all components of the compensatory education programs needs to be developed. It is suggested that the plan include both an activity timeline and $118 t i n g$ of duties of director, compensatory teachers, and evaluators. A clear statement of process and product objectives and priorities for each component of the various programs is also needed.
- The initial kick-off meeting should stress the following: essential elements of the program (e.g., number of pupils to be served, number of hours of service per pupil, nature of building level plans, budget for each program site, etc.), planned changes in delivery of services, packets of new materials, timelines and deadifnes, inservice schedule, inservice education's relationship to the program's goals and objective, parent activities, evaluation activities, observations by director, etc.
- A policy statement needs to be formulated and put into effect to include:
--Staff duties directly related to program goals.
- Allotment of staff time to ensure performance of duties.
- Selection of diagnostic-prescriptive tool to focus on students needs and corrective measures.
- Determination of equitable means of fund distribution to ensure adequate materials and supplies.
- Written material (e.g., brochures, flyers, newsietters, etc.) and public gatherings (e.g., assemblies, open houses, conferences, etc.) for parents need to be developed and carried out related to the purposes, rationale, and techniques used in the $A^{2}$ program.

2. More compensatory education sponsored inservice activities. These activities might include:

- Establish a commityee of $A^{2}$ teachers to plan and execute $A^{2}$ inservices for compensatory and regular education staff. Topics for these sessions might include:
--Student monitoring techniques for secondary and elementary teachers that provide continuous feedback of progress to the student, as well as, the teacher.
- Reading and mathematics materials that are appropriate for secondary compensatory education students.
- Available computer software and its application to support compensatory aducation instruction at elementary and secondary levels.
--Techaiques to motivate secondary students to greater levels of achievement.
- Coordination of compensatory education instruction with other secondary teachers.
- -Articulation of objectives and teaching strategies between elementary and secondery.
- Explore means of encouraging attendance at professional conferences by granting conference days and compensating for expenses.
- Consider the possibility of conducting inservices for compensatory education parents in the area of parenting skills, the educational resources available to assist them in this parenting role, how to understand their child's test data, what can parents do to improve their child's behavior in school, and volunteer options for becoming involved in activities that support the instructional program.

3. Greater recognition and rewards for excellence. Excellence to be rewarded and/or recognized could include:

- Teaching excellence displayed by compensatory education instructors.
- Student accomplishrents for academic achievement and excellent behavior in the compensatory education progam are recognized in the regular classroom and school.
- Parents are told of student successes in the compensatory education program.

4. Improved student testing and student seiection procedures. Techniques to make improvements in this area might include:

- Create a system-wide testing inservice program on the appropriate methods of preparing students for taking standardized tests and the importance of following exact test directions to ensure useable results. This might be done in video form.
- Provide better inservice training to the building testing coordinators. This training should be very specific concerning the various tasks related to monitoring and coordinating the builiding level standardized testing program. The builiding level testing coordinator has a responsibility to inservice staff on how to adninister the cest in the standardized fashion and then monitor the administration in selected classes to check on the adequacy of the standardization achieved.
- Allow for teacher input as well as test data as valid means to determine the eligibility of needy students.

5. Reduce variations in Lhe program between building sites by having the director and compeasatory education staff analyze the building results presented in Appendix B. Hopefully, a plan can be formulated to reduce (or control) these variations in progran impact. Of course, in some instances it is understood that relatively poor performance was caused by unanticipated problems such as the extended illness of a key teacher, etc. To some extent, the above recommendations that increase cominaications relative to program definitions and operations willin part help reduce variations between program sites.
