ABSTRACT

The current job market for 1987 Michigan college graduates was estimated by placement directors and career counselors at 50 Michigan two-year and four-year colleges and universities. The staff rated supply and demand based on information from graduate surveys, employers, and job listings. For each major, the actual ratings are provided of opportunities for graduates at the following levels: associate and certificate, bachelor's, master's, doctoral, and professional and advanced specialists. The rating scale consists of five categories: many more jobs than graduates available (excellent), some more jobs than graduates (very good), about as many jobs as graduates (good), a few more graduates than jobs (fair), and many more graduates than jobs (poor). A listing of job fields is arranged by the level of demand for 1987 college graduates. The levels used are: excellent, very good, good, fair, poor. The list is grouped by degree level: associate, bachelors, masters, doctoral. Findings include: health services graduates at the associate and certificate level had the highest demand; at the bachelor's level, the highest demand for graduates was in industrial arts, computer and information sciences, health services, and service technologies; and master degree graduates in agricultural sciences, health services, computer and information services, and law had very good job markets. Foreward

Several studies are conducted each year by the Collegiate Employment Research Institute of Placement Services at Michigan State University to obtain information on the job market for college graduates. Among these, Recruiting Trends receives input from personnel administrators and campus recruiters on the demand for selected academic majors. However, in this study, input is received from placement and career planning staff of educational institutions throughout Michigan; thus, a wider range of majors is covered. This report provides information on the anticipated job market for 1987 graduates of two- and four-year institutions and for all degree levels.

This study confirms that the job market has stabilized after several years of growth. The market for engineers has softened, although there should be sufficient positions for most engineering graduates to obtain employment. Improvement is seen in opportunities for agricultural sciences and education graduates. The job market for business and health services graduates remains strong.

We hope you find this report useful in your work. Should you have any questions or need additional copies, please contact the Institute.

* All Staff Members at this institution collaborated on the rating form.
Only one survey was returned.

GENERAL OVERVIEW

Placement directors and career planning counselors at all Michigan two- and four- year colleges and universities were requested to rate the demand situation for 1987 graduates of each academic program offered by their respective institutions. All degree levels were covered in the questionnaires sent to each institution. Responses were received from individuals representing 50 institutions. The institutional response rate was 69% for 2 year public institutions, 93% (14) for public four-year institutions, 48% (16) for private two-year and four- year institutions.

Ratings provided by these placement officials were based on information obtained from follow-up studies of recent graduates, interviewing statistics for employer requests by major, numbers of job listings, and discussions with employers who were recruiting college students.

The following rating scale was designed to measure job market, demand:

<u>Rating</u>	<u>Code</u>	<u>Explanation</u>
<u>Excellent</u> Job Market	5	Many more job opportunities than graduates available.
<u>Very Good</u> Job Market	4	Some more job opportunities than graduates available.
<u>Good</u> Job Market	3	About as many jobs as graduates available.
<u>Fair</u> Job Market	2	A few more graduates than jobs available.
<u>Poor</u> Job Market	1	Many more graduates than jobs available.
<u>College Bound</u>	CB	Majority of graduates from two-year institutions continuing their education at four-year institutions.

For an excellent rating, the mean rating was greater than 4.5; the very good rating ranged from 3.6 to 4.4, the good from 2.6 to 3.5, the fair from 1.6 to 2.5, and the poor was less than 1.5 over. The results are summarized in two tables for each degree level. In the first table (Table 1, 3, 5, and 7), all programs were collapsed by their major CIP groupings. The groups are listed in numerical order according to CIP number and in rank order from highest to lowest. In the second table (Table 2, 4, 6, and 8), each program that was rated is listed with its CIP group. The number of placement officers rating a particular major have been included and can be found under the column designated with an "n".

Associates's Degree and Certificate graduates will face a mixed job market. Nineteen of the major CIP groups were rated good or very good. The demand for health services graduates was rated the highest. Other areas with good demand included business management, office services, technical fields in computers and information sciences, mechanics and construction, manufacturing, and home economics. Sixteen general areas rated fair, including natural resources, agribusiness, and social sciences. Industrial arts and philosophy/religion were rated poor. In the remaining six groups, the majority of graduates continued with their education at four-year institutions.

Of the 293 programs that were rated (Table 2), 55% (161) were rated with "good," "very good," or "excellent" job markets. The highest demand was in ornamental horticulture, typing, automobile vehicles and accessories marketing, surveying, civil technologies, civil drafting, industrial production technologies, and physical therapy assistance. Other areas demonstrating strong job markets included accounting, restaurant management, management science, secretarial programs/executive, word processing, and general office, data processing, electronic technology, manufacturing technology, dental assisting, respiratory therapy, and nursing, (examples with 5 or more placement staff rating the major).

Ninety-two programs (31%) received a fair to poor rating. These programs were found in every major academic area with the majority in agriculture, communications, and performing arts. Graduates of 40 programs were likely to continue their education.

There does not appear to be much difference in these ratings as compared to last year. Engineering and computer/information sciences fields have dropped somewhat over the year, but remain "good" overall. Some fields in agriculture have also experienced a weakening market, particularly in agribusiness and agricultural mechanics. One area that appears to have changed noticeably from last year was protective services where many programs dropped one or two places on the rating scale.

Bachelor's Degree graduates can expect to find slightly fewer job opening than graduates from last year. These findings tend to substantiate employer estimates of hiring quotas for this year, as reported in Recruiting Trends. The highest demand for graduates will be in industrial arts, computer and information sciences, health

services, and science technologies (Table 3). Seventeen of the major degree groups received ratings of "good" and another seventeen were rated "fair" (Table 3). Areas receiving only "fair" ratings included life sciences, letters, foreign languages, social services, visual and performing arts, and communications.

Of the 392 majors rated, 25% (99) were considered to encounter "very good" or "excellent" job markets. Fields of study which were rated the highest were health services (e.g. alcohol/drug abuse specialists, recreational therapy, medicine), business (systems analysis and data processing), retailing for textiles, mathematics and computational skills, and hospitality marketing. A wide variety of fields were rated with "very good" designations, particularly in business (e.g. mathematics and special education), computer science, and technical arts (e.g. electronic, instrumentation, plastics, and manufacturing).

The majority of programs (70%) received "fair" to "good" job market ratings. Graduates from these programs can expect to find job openings but they will face stronger competition. A well thought-out job search may be necessary to secure employment in one of these fields.

Seventeen programs (4%) were rated "poor" as to job market conditions. Except for a few technical fields such as petroleum engineering and biometrics, programs placed in this category were primarily natural resource (conservation, parks and recreation), languages (e.g. Baltic, Slavic and Greek), special studies (e.g. South Asian, peace, and women), literature (comparative, English), anthropology, (humanities, philosophy and theology), and fine arts.

In comparison to 1986, engineering graduates will face a weaker job markets. Last year, engineers in general could expect "good" to "very good" job markets. This year the ratings slipped slightly, ranging from "fair" to "good," with several bright spots (systems engineering, material sciences and mechanical engineering). For teachers, the job market continues to remain strong, particularly in science fields and handicap/special education. At this time, the job market for business majors continues to be strong.

Master Degree graduates in agricultural sciences, health services, computer and information services, and law can expect "very good" job markets (Table 5). Areas with "poor" job conditions include philosophy and religion, liberal or general studies, and area and ethnic studies. The remaining 26 general discipline concentrations were rated "fair" to "good".

Two hundred and twenty-eight (228) programs were evaluated (Table 8). Generally the job market appears to be favorable for most of the programs with 25% receiving a "very good" to "excellent" rating and another 67% with a "fair" to "good" rating. Only, eighteen programs were placed in the "poor" category.

For master's graduates in food sciences, hotel/motel management, transportation management, management science, special education, systems engineering, speech/audiology, and selected health services, the job market this year appears to be excellent.

At the other end of the scale, graduates from American and European studies, mining engineering, languages (Italian and Latin), literature (classics, comparative and English), liberal studies, humanities, philosophy, earth science, and fine arts will face a very tight job market.

When comparing the 1987 ratings with last year's ratings, there does not appear to be any noticeable change in the demand situation for master's candidates. The possible exception is in engineering where the labor market has weakened slightly.

At the Ph.D. level, the job market looks promising for nearly all majors. The best opportunities will be for computer and information sciences and agricultural sciences graduates (Table 1). The tightest job market will be for letters, visual and performing arts, library sciences, social services, philosophy and religion. However, none of the major programs received an overall poor rating.

Of the 116 programs rated, 52% received "very good" to "excellent" ratings. The remaining 58% were rated "fair" to "good" (Table 8). Those programs that received an "excellent" rating were concentrated in engineering, business, health services and agricultural sciences (all fields). There are signs that opportunities for Ph.D. graduates are improving. While the market for business and engineering graduates remained strong, there was improvement in other areas, particularly agriculture, education and natural sciences. Job markets continue to be weak for some fields in social sciences, humanities, particularly history, and fine arts.
