IDENTIFIERS *Missouri Mastery and Achievement Tests

ABSTRACT

The Missouri Mastery and Achievement Tests (MMAT) were developed as a result of the Excellence in Education Act of 1985, which required the state department of education to identify core competencies and key skills in reading/language arts, mathematics, science, and social studies/civics and to test a sample of students annually. State-level data on these tests is currently reported for grades 3, 6, 8, and 10. Approximately 50,000 students for each grade take these tests in grades 3 and 6, and about 5,000 students for each grade (approximately 10% of Missouri students) take the MMAT for grades 8 and 10. Spring MMAT results indicate that student achievement has leveled off in recent years, with students showing little or no improvement across most grade levels or subject areas since the implementation of the revised tests in 1991 and 1992. In relation to the initial testing in 1987, scores are up, suggesting that the tests have had positive impact on achievement. The 1996 MMAT results are somewhat encouraging in that they reflect improvement over 1987, but they reflect little recent change. (Contains 20 tables.) (SLD)

History of the Missouri Mastery and Achievement Tests (MMAT)

The MMAT was developed as a result of the Excellence in Education Act of 1985. This law requires the Department of Elementary and Secondary Education to identify "core competencies and key skills" in reading/language arts/English, mathematics, science, and social studies/civics; to test annually a sample of students throughout Missouri; and to report results to the General Assembly. Local school districts are required to measure student achievement on the key skills and to identify areas in need of instructional improvement.

The *Core Competencies and Key Skills for Missouri Schools* documents, revised in 1992 for grades 2-6 and 1991 for grades 7-10, identify key skills as required by the Excellence in Education Act. These documents were developed with the assistance of Missouri educators, and provide a framework around which districts can build a complete curriculum.

The MMAT was designed in accordance with the American Psychological Association's Standards for Educational and Psychological Testing. Missouri teachers assisted in writing test items.

The revised MMAT, like the original test, includes four multiple-choice items to measure each key skill. To demonstrate mastery of a key skill, a student must correctly answer at least three of the four items. The MMAT for grades 3, 6, 8, and 10 includes four subtests (reading/language arts/English, Mathematics, science and social studies/civics). Each subtest contains between 56 and 104 items for a total of about 300 questions per grade level. Test administration requires approximately 2 hours per subtest.

The MMAT is available for district use for grades 2-10. State level data is currently reported for grades 3, 6, 8, and 10. Many Missouri students in grades 3 and 6 take the MMAT (approximately 50,000 for each grade). A representative sample in grades 8 and 10, which includes an estimated 10 percent of Missouri students, take the MMAT (approximately 5,000 for each grade).

MMAT Data:

Scale Scores allow districts to determine how their students compare with other Missouri students and to monitor educational progress over time.

Score Distribution Data help educators determine whether instructional efforts are reaching all of the various populations of students taking the test.

Key Skill Mastery Data provides information to help teachers guide instruction for individual students and/or enables districts to evaluate the effectiveness of curriculum and identify needed changes.

Summary

The 1996 Summary Report presents trend data for the spring of 1995 and 1996. Data from the first year the revised Missouri Mastery and Achievement Tests (MMAT) were administered is also presented. The report includes data for grades 3, 6, 8, and 10.

Spring 1996 MMAT results indicate student achievement has leveled off in recent years, with students showing little or no improvement across most grade levels or subject areas since the implementation of the revised tests in 1992 (grades 3 & 6) and 1991 (grades 8 & 10). In relation to the base, or initial year of testing in 1987, scores are up, indicating instruction has impacted students at most levels of achievement in a positive way. The 1996 Summary Report has trend data for scaled score averages, score distribution and key skills mastered.

Scaled Score Averages - In grades 3, 6, 8, and 10 Missouri students demonstrated, on the average, an upward trend in achievement. Grade 10 shows no meaningful improvement in English and social studies since establishment of the 1987 baseline. (Reference Figure A, Page 5)

Score Distribution Data - Student scores have leveled off over time and remain flat for 1996. With the exception of grade 10 in English/language arts and social studies, scores are up in relation to the base or initial year of testing (1987). However, there has been no significant change in the lowest two quintiles since the 1992 and 1991 revision years. (Reference Figure B, Page 6)

Key Skills Mastered - The average students' performance in general has remained stable. Grade 10 has regained percentage points to match 1994 levels in the areas of math and science, after a 7% and 5% drop respectively in 1995. (Reference Figure C-E, Pages 7-16)

The 1996 MMAT results are somewhat encouraging, in that student scores have improved over the established 1987 baseline. But on the whole, most data shows student scores stable or flat in recent years. The MMAT continues to provide a framework for fulfilling one of the major goals of the Excellence in Education Act - Encouraging academic excellence for all of Missouri's public school students.

*Missouri Department of Elementary and Secondary Education,
Assessment Section*

Scaled Score Averages

- Scaled score averages monitor educational progress over time.
- Each subject is shown for 1995 and 1996 for grades 3, 6, 8, and 10. Each subject is also shown for the first year the revised MMAT was administered (1992 for grades 3 and 6, and 1991 for grades 8 and 10).
- In 1987 a baseline was established and the average for each grade and subject was set at 300.
- **A change of about 11 points over time is considered educationally meaningful.**

Figure A: Scaled Score Averages

Grade	Year	Reading/ English/ Lang. Arts	Math	Science	Social Studies	Average
3	1992	323	339	364	336	341
	1995	325	345	372	347	347
	1996	325	346	374	348	348
6	1992	308	349	347	322	332
	1995	315	370	365	335	346
	1996	314	372	369	335	348
8	1991	318	331	339	315	326
	1995	319	349	353	323	336
	1996	317	355	357	321	338
10	1991	313	326	327	302	317
	1995	306	328	322	297	313
	1996	308	339	333	300	320

Summary:

Students, on the average, demonstrated a slight upward trend in performance in Grades 3, 6, 8, and 10 for 1996. Student scores have risen since the 1987 baseline was established but achievement has leveled off in recent years. Grade 10 has shown no meaningful improvement in English and social studies since the baseline year.

Score Distribution Data

- Score distribution data can be used to monitor the specific effects of instruction over time. Each subject area is shown for grades 3, 6, 8, and 10 for years 1995 and 1996. Each subject is also shown for the first year the revised MMAT was administered (1992 for grades 3 and 6, and 1991 for grades 8 and 10).
- In 1987 the scaled scores were rank-ordered. The ranked scores were divided into five equal parts. Twenty-percent of the students fell into each part or cell, thus establishment of a baseline.
- Overtime, the percentage of students in the bottom two cells should decrease, and the percentage of students in the top two cells should increase. The percentage of students in the bottom two cells should be close to zero.

		19	24	23	15	18	15	15	19	16	22	25	24

Summary: Student scores have leveled off over time and remain flat for 1996. With the exception of grade 10 in English/language arts and social studies, scores are up in relation to the base or initial year of testing (1987). However, there has been no significant change in the lowest two quintiles since the 1992 and 1991 revision years.

Median Student Mastery

- The chart shows the percent of key skills mastered by the **average or median** student in Missouri in each subject area for grades 3, 6, 8, and 10.
- The number at the top of each grade and subject represents the total number of skills tested for that subject area and grade level.
- Each number represents the percent of key skills mastered by the average student in Missouri for the noted year.

Figure C: Percent of Key Skills Mastered by the Average Student By Year

Summary:

The chart indicates the average student achievement, in general, has remained stable. Grade 10 has regained percentage points to match 1994 levels in the areas of math and science, after a 7% and 5% drop respectively in 1995.

Median Student Mastery In All Subject Areas

- The chart presents a summary of all subject areas for grades 3, 6, 8, and 10.
- Data is presented for 1995 and 1996. Data is also shown for the first year the revised MMAT was administered (1992 for grades 3 and 6, and 1991 for grades 8 and 10).
- The chart shows total key skills for all subject areas mastered by the median student in the noted grade level.

Figure D: Median Student Mastery All Subject Areas

Grade	1992 (Grades 3 & 6) 1991 (Grades 8 & 10)	1995	1996
3	41 key skills mastered out of a total of 53 $41/53=77\%$	42 key skills mastered out of a total of 53 $42/53=79\%$	42 key skills mastered out of a total of 53 $42/53=79\%$
6	45 key skills mastered out of a total of 74 $45/74=61\%$	48 key skills mastered out of a total of 74 $48/74=65\%$	48 key skills mastered out of a total of 74 $48/74=65\%$
8	40 key skills mastered out of a total of 73 $41/73=55\%$	41 key skills mastered out of a total of 73 $41/73=56\%$	41 key skills mastered out of a total of 73 $41/73=56\%$
10	38 key skills mastered out of a total of 80 $38/80=48\%$	37 key skills mastered out of a total of 80 $37/80=46\%$	39 key skills mastered out of a total of 80 $39/80=49\%$

Summary:

The chart indicates the average student performance, in general, has remained stable. Grade 10 has regained percentage points after a drop in 1995.

Key Skill Mastery Data

- The information on pages 9-16 shows the percent of students in Missouri mastering each tested objective for the years 1995 and 1996, in grades 3, 6, 8, and 10. Data is also shown for the first year the revised MMAT was administered (1992 for grades 3 and 6, and 1991 for grades 8 and 10).
- The key skills are presented in *Core Competencies and Key Skills for Missouri Schools*, published by the Missouri Department of Elementary and Secondary Education. The key skills are listed by the code number used in respective publication and a brief descriptor.
- Each tested objective is measured by four items. The student must answer at least three of the four correctly to demonstrate mastery of the key skill.
- A change of 5 or more percentage points between years is educationally meaningful.
- See Figures C & D for percentage of key skills mastered by median students and total skills mastered by grade.
