ABSTRACT

Los Angeles City College (LACC) is one of 15 California community colleges participating in a three-year longitudinal study designed to provide information on vocational education students, and student characteristics in general, as well as information about the efficacy of small sampling and methods most useful for long-term studies. Data in the first report were obtained for a sample of 558 LACC students from file records and telephone interviews with 61% of the sample. Findings revealed that: (1) of nearly 11,000 new applicants to IACC in Fall 1978, fewer than 7,000 were enrolled in classes at first census week; (2) about 40% of LACC entrants (30% statewide) had previous college experience, with about 15% (10% statewide) holding an associate degree or higher; (3) students indicated a variety of objectives in attending college; 38% had job-related objectives, 35% desired self-enrichment or had no objective, and about 28% planned to transfer to a four-year institution; (4) ethnic minority students accounted for 78% of IACC enrollment and only 34% statewide; and (5) about 60% of LACC students were working, and of these, 80% indicated their jcb was unskilled or semi-skilled. The image of the community college student as an 18-year-old just out of high school with plans to transfer after four semesters to a university appears to be correct for only a small percentage of students, at LACC and across the state. PURPOSE OF THE STUDY

L.A.C.C. is participating as one of fifteen California Community Colleges in a major statewide effort to "provide the following information about each of the participating colleges and about the group as a whole:

- (1) Detailed information about pertinent aspects of vocational education students and student bodies as a whole
- (2) Information about the effects of college programs on the lives of vocational students.
- (3) Information about the efficacy of small sampling and the methods necessary to complete a useful and meaningful long-term study.
- (4) Information about the feasibility of using a small-sample long-term study for supplying reliable information valid for the purposes of reporting to state and federal agencies on selected aspects of vocational programs.
- (5) Information on the factors within certain vocational programs which inhibit Limited English Speaking and Non-English Speaking (LES-NES) students from enrolling in and/or completing their work.
- (6) Information about needed curriculum and services for vocational education programs for disadvantaged, or handicapped students, displaced homemakers, or those in non-traditional programs."

PROCEDURE OF THE STUDY

The study was funded under Subpart 3 of PL 94-482, with Dr. M.S. Sheldon, Research Coordinator at Pierce College, acting as statewide project director, and Dr. Russell Hunter serving as full-time project administrator. The colleges listed below are participating in the study which is expected to continue for at least three years:

Antelope Valley College
Bakersfield College
Cerritos College
Contra Costa College
El Camino College
Foothill College
Golden West College
Imperial Valley College
Los Angeles City College
Los Angeles Pierce College
Sacramento City College
San Jose Evergreen College
Santa Ana College
Shasta College
Southwestern College

Colleges include urban, suburban, and rural colleges, northern and southern colleges, and colleges of varying enrollments. It is expected that combining data from all the colleges will produce a reliable picture of California Community College education.

Detailed planning of the study was done by a consortium consisting of (1) research coordinators from the fifteen colleges, (2) representatives of the State Chancellor's Office, and (3) representatives from community college research organizations. Project guidelines were prepared by this consortium in four statewide conferences. The Project Staff produced (1) a 150 page manual for data collection (2) 15 biweekly update newsletters, and (3) frequency distributions and cross tabulations of data collected from the colleges.

Data were coll stell from two sources: (1) student records, and (2) telephone interviews. The first source provided information on student demographics, student enrollment practices, and results of study (i.e. enrollments, completion ratios, GPA's). The second source provided

Page 3

information on demographics not maintained in college files (marital status, employment status, etc.) as well as student perceptions of their needs, goals, reasons for dropping courses or leaving school, and the effects of college study upon their lives.

This first report describes data gathered during Fall 1978 at L.A.C.C., with statewide comparisons presented where available. By agreement with the statewide consortium, the sample of students was to be large enough to permit estimated percentages to be within 5% (95% confidence) at the local college, and the sample was to be randomly drawn from all Fall 1978 first time entrants who were enrolled in classes at first census week.

FINDINGS

From the 10778 new applications for admission to L.A.C.C. in Fall 1978, 1138 students were selected using random number table combinations of the last two digits of the students' social security numbers. 406 of these (35.7%) were not enrolled at census week, leaving 732 in the sample, which was further randomly reduced to the required number of 558.

The following tables summarize the data collected on these students in Fall 1978. Included in some of the tables are statistics about the entire L.A.C.C. population*, and statistics, where available, weighted (by project staff) to estimate statewide figures.

SUMMARY AND CONCLUSIONS

This is the first report summarizing L.A.C.C. uath obtained through participation in a longitudinal study of a sample of first time Fall 1978 students at fifteen of the state's community colleges. Data were obtained from student records and by telephone interviews with the student.

Following are some observations of the Fall 1978 findings:

- (1) Of the nearly 11000 new applications for admission to LACC in Fall 1978, less than 7000 were enrolled in classes at first census week. About half of the 4000 not enrolled at census week did not enroll in classes at all.
- (2) Attempts were made to telephone all 558 students selected in the sample. Credible interviews were completed with about 61%, 18% had incorrect phone listings or a disconnected phone, and 21% were unable to be contacted after three tries at different times of day.
- (3) Comparisons of day-evening registrations and sex indicate the sample is representative of the LACC population. Age comparisons indicate the average sample age is about two years less than the LACC population, an expected result since the sample includes first-time students only.
- (4) About 40% of LACC entrants (30% statewise) had previous college experience, with about 15% (10% statewide) holding an AA degree or higher.
- (5) Over half the LACC entrants (also statewide) had a year or more elapse since their last school attendance.

- of objectives in attending college; about 38% job related, about 35% self enrichment or no clear objective, and about 28% transfer to a four year institution.
- (7) LACC differs significantly from statewide in the following characteristics:
 - (a) 78% of LACC students are ethnic minority; 34% statewide.
 - (b) 30% of LACC students signed up for 6 or more classes; 15% statewide.
 - (c) 80% of LACC students who work (about 2/3 of them) indicated their job was unskilled or semi-skilled; 60% statewide.
- (8) The image of the community college student being an 18 year old just out of high school planning to stay four semesters and then transfer to a four year university is correct only for a small percentage of students, both at LACC and across the state.

The next report on this project will examine persistence and academic performance through the first year and will examine student majors.
