 Assessment; *Policy Formation; *Student Evaluation
 IDENTIFIERS United States

ABSTRACT

This booklet examines performance-based education accountability systems in the United States. It defines the four components of these accountability systems--standards and assessments, multiple indicators, rewards, and sanctions--and discusses which ones are found in each state and whether or not they appear in law or regulation. All four components may or may not exist in any one state and any or all may occur in one of two ways: as a mandate from the state or as a part of education policy and/or regulation. Data for the study were collected using phone calls to state departments of education and searches of statute books, online databases, and state Web sites. The components of accountability systems in each state are identified in a chart, and the statute number for an accountability component, if applicable, is identified by statute number. The four main categories of multiple indicators for accountability--the component that links standards and assessments to rewards and sanctions--are likewise detailed state by state. The publication is designed to help policymakers see how their state compares to others in developing performance-based accountability systems and understand what effect state authority to control the schools versus decentralization has on accountability systems. INTRODUCTION

The systemic approach of combining standards, assessment and accountability into a unified set of laws and regulations — a "performance-based accountability system" — has been coming onto the state scene for the last 25 years.

In the early 1970s, the National Assessment of Educational Progress' move to criterion-referenced testing — which measures student performance against content standards — illustrated the need for more specific standards by which to gauge student achievement. Since then, states and the federal government have introduced a variety of measures to respond to public pressures to improve schools and increase student achievement. The rise of minimum competency testing, the development of stronger statewide standards and assessments, and the use of a multitude of indicators (such as the U.S. Department of Education's "wall chart" comparison of state test performance) eventually pushed states to add another element — the use of rewards and sanctions. In numerous states, schools and districts whose students exceed standards are eligible for rewards, while those whose achievement fall below the set standards may receive a variety of sanctions, including being declared "academically bankrupt."

The accountability circle is complete when teachers, students, building and district leaders have clear instructional goals (standards), when states and local districts have developed sound assessment techniques and quality indicators, and when visible consequences for all involved parties have been put into practice (rewards and sanctions).

A complete performance-based education accountability system, therefore, includes these four components: *standards and assessments, multiple indicators, rewards and sanctions*. All four components may not exist in any one state, and any or all may occur in one of two ways — as a mandate from the state or as a piece of education policy and/or regulation.

This publication defines each of these components and discusses which ones are found in each state and whether or not they appear in law or regulation. Also included are descriptions of two of the U.S. territories. These, however, are not included in the state tables or the analysis by governance and locus of control. The publication is designed to help policymakers see how their state compares to others in developing performance-based accountability systems, what performance indicators states favor, who uses rewards and sanctions, and what effect state authority to control the schools vs. decentralization has on accountability systems. (For more information on understanding and designing standards-based accountability systems, see the ECS publication, *Designing and Implementing Standards-Based Accountability Systems: A Policymaker's Guide*.)

EDUCATION ACCOUNTABILITY SYSTEMS IN 50 STATES

Definitions of Components

Standards and assessments. Content or performance standards are written to provide clear expectations of what students must know and be able to do in designated subject areas at specific grade levels. The standards are coupled with assessments that measure how successful students are in meeting the standards.

Multiple indicators. An indicator measures either directly or indirectly the effect of a particular element on student achievement. Indicators include, for example, school or district "report cards," attendance and dropout rates, demographics and expenditures.

Rewards. A reward is granted to a teacher, school or district when student achievement exceeds the established standards or previously reported outcomes. These rewards are given for gains made; they are not given as grants or waivers to help schools work toward gains. Rewards are usually monetary.

Sanctions. If student achievement falls below levels set by the standards, or if student test scores continually fail to show gains, the state may apply sanctions against whole districts, or districts may apply sanctions against individual schools. Sanctions vary from a simple warning to intervention and take over by state officials.

State Components

The three tables that follow describe the general form of each state's accountability system. Table 1 shows which components a state has and whether they exist in statute or regulation. The word "none" indicates that the component does not exist or exists only in recommendation or publication form from the state department of education. Table 2 summarizes the information presented in Table 1, and Table 3 refers to statute numbers for those components found in state code.

Territorial Descriptions

American Samoa (no data available)

District of Columbia

Responsibility for the creation and implementation of accountability mechanisms rests with the superintendent of schools, a position which currently carries responsibility for both state and district functions. Standards have been written for the district and are in use, as well as an assessment (Stanford 9) which is aligned with both standards and district goals.

Accountability for gains or losses in student achievement are part of the Professional Performance Evaluation Process, a new evaluation system for teachers. Sanctions attached to the use of this process include (1) an intervention program for teachers to help them improve their performance and help students raise their achievement scores, and (2) reassignment if scores remain low in their classrooms. The reassignment sanction is also in place for administrators if building scores are low and show no improvement. No reward component exists at this time.

Puerto Rico

Although none of the components are yet in statute, Puerto Rico is making excellent progress in education accountability. All parts of the system currently rest with the Department of Education for both development and implementation.

Standards have been written in math, science, English, Spanish, social studies, health, fine arts and physical education. In addition, standards for seven vocational technological programs have been formulated and are under revision. The standards have also been aligned to the curriculum and most of them are in alignment with the National Standards. A state assessment system is also in place. An extensive system of accountability indicators gathers both quantitative and qualitative data. Information is collected in the following areas: (1) academic program, (2) technological education, (3) technological institutes, (4) integrated services for handicapped people, and (5) schools safe of drugs and weapons. Rewards and sanctions components are being considered.

Virgin Islands

The Virgin Islands continues to build its education accountability system. Both standards and assessments have been established as goals of the Department of Education, and progress continues to be made on the development of both components. A graduation exit examination is being considered during the 1999 legislative session. Interest also exists in designing both rewards and sanctions components.

Components in State Statute

The next table, Table 3, shows which components of a performance-based accountability system exist in current statute in each state and the statute number assigned to that component in code.

The table does not show components that exist only in state regulation and/or publications from state departments of education. For instance, more than 95% of states have or are developing content standards and accompanying assessments, but only those mandated by statute are included here.

In addition, indicators may occur separately in statute, as in state report cards or school profiles, or they may be listed within state statutes that govern sanctions or rewards. Wherever they occur, they are listed here only if they include some assessment of student achievement.

Rewards also must be based on some measure of student gain; most are monetary in nature. Waivers are included as rewards only if they are granted without the need of application and are awarded as a result of gains in student achievement. Most waivers are not rewards for achievement, but rather a way to assist a school or district attempting to raise student achievement with a new plan or program they are unable to operate under current regulation.

Finally, sanctions may occur in a separate statute or be included within the public school accreditation system. Sanctions are included here only if they are based on measures of student achievement.

Alignment Issue

The existence of the various components of an accountability system does not mean those components are aligned with one another or make up a coherent accountability package. For instance, an indicator such as a state report card or school profile may have been placed in statute up to 10 years before the state mandated standards and/or assessments. Also, in many cases, state assessments are based on early curriculum frameworks, not current content standards, or are not aligned with state curriculum or standards.

In addition, though based on measures of student achievement, sanctions may be part of a school accreditation system enacted well before other components. They may have a separate set of indicators or may include indicators not tied to student achievement. When that is the case, the sanctions may not be aligned with newer statutes or regulations concerning standards or rewards.

State Patterns

Table 4 below shows which patterns of the four components of a performance-based accountability system states use. This table uses only the components found in *statute*; it does not include those found in regulation or other locations. The numbers in the first column indicate how many of the four components a state's accountability system has, and the second lists the components by number — 1 - standards/assessments, 2 - multiple indicators, 3 - rewards, 4 - sanctions. For example, California, Hawaii, New Hampshire, Utah and Wisconsin use two components mandated in statute — standards/assessments and multiple indicators. States labeled "1-2-4" use three components — standards/assessments, multiple indicators and sanctions.

Table 4: State Component Patterns

Key: 1 - standards and assessments; 2 - multiple indicators; 3 - rewards; 4 - sanctions

COMPONENTS		STATES
Number of components in state statute	Pattern of components	
0	0	Montana, North Dakota, Wyoming
1	1	Kansas, Maine, Minnesota, South Dakota, Virginia
1	2	Idaho, New York
2	1-2	California, Hawaii, New Hampshire, Utah, Wisconsin
2	1-3	Maryland, Nebraska
2	1-4	Mississippi, Vermont
2	2-3	Pennsylvania
2	2-4	Iowa
3	1-2-3	Arizona

COMPONENTS		STATES
Number of components in state statute	Pattern of components	
3	1-2-4	Alabama, Alaska, Arkansas, Colorado, Louisiana, Massachusetts, Michigan, Missouri, Nevada, Ohio, Oklahoma, Oregon, Rhode Island, Tennessee, West Virginia
3	1-3-4	Connecticut, North Carolina
3	2-3-4	New Jersey
4	1-2-3-4	Delaware, Florida, Georgia, Illinois, Indiana, Kentucky, New Mexico, South Carolina, Texas, Washington

Complete Systems

As Table 4 shows, only three states have no components of an accountability system in statute (Montana, North Dakota, Wyoming), while 10 states have complete performance-based systems in statute, having all four of the necessary components — standards and/or assessment, multiple indicators, rewards and sanctions. But again, these components may or may not be aligned with one another. A careful reading of statute numbers is the best indicator of possible alignment. If the numbers are in sequence, or come from the same section, the system is probably aligned; Texas is an excellent example of this. If one or more of the numbers appears random, the separate components may not form a complete system and may have been placed in code as many as 10 years apart.

Multiple Indicators

Multiple indicators is the component that links standards and assessments to rewards and sanctions. Because these indicators are both varied and numerous, they are presented in a separate table below, Table 5. The indicators listed were gathered from statute, regulation and state department of education documents. The two states (Idaho, New York) that have multiple indicators as their only accountability component most likely require a "report card" to the public.

As noted previously, indicators listed are either measures of gains in student achievement or are elements perceived to influence those gains. They have two primary functions. First, the state education department uses the indicators to analyze whether school improvement goals have been met. Second, the state may use them to determine whether a district or school qualifies for a reward or if the state needs to apply a sanction for low performance.

The four main categories of indicators used for the chart below relate to: (1) students, including assessment scores, diversity, dropout rate and truancy; (2) professional staff, including attendance, experience and salary levels; (3) program, for instance, curriculum, climate and parent involvement; and (4) expenditures and use of resources, which includes per-pupil expenditure. Though items in the last three categories are not immediate indicators of gains in student achievement, they are perceived by educators, legislators and researchers as having a direct relationship to student achievement.

Use of Indicators

Seven of the indicators are used by 16 or more states. They are:

- ♦ Assessment scores (41 states)
- ♦ Dropout rate (33 states)
- ♦ Student attendance (29 states)
- ♦ Expenditures and use of resources (includes per-pupil expenditure) (27 states)
- ♦ Graduation rate (18 states)
- ♦ Student behavior (includes discipline, truancy, expulsion and/or suspension) (18 states)
- ♦ Transition (education or employment after high school graduation) (16 states).

Assessment scores, the first indicator in the student category and the one states use most frequently to indicate gains in student achievement, are also one of the most complicated indicators. Various types of assessments are used to collect the student test scores reported in this subcategory, including, but not limited to, norm-referenced tests, criterion-referenced tests, performance assessments and portfolios.

Scores from these tests may be used separately or in combination to analyze gains. Current year's scores may be compared to the previous year's or years' data, using national norms or state standards, whichever is applicable. The comparisons formed may be between individual classes at specified grade levels, among buildings within a district or among districts.

Comparing individual student scores gives the most accurate data on student gains but is used less frequently than group comparison. Tracking individual student progress is more expensive than group comparisons and is becoming increasingly difficult because of the mobile nature of the American population. While it seems reasonable to compare last year's 4th-grade scores with this year's 5th-grade scores, this year's 5th graders may not be the same children as last year's 4th graders. Shifts in employment and other factors can cause drastic changes in student populations. Accurate tracking even within state borders is cumbersome, time consuming and can be prohibitively expensive. Only four states mandate the collection of data on student mobility — Alaska, Colorado, Illinois and Nevada, states that seem to have little in common.

Using two years of assessment data may give a fairer picture of gains in student achievement when using group comparisons for allocating rewards and sanctions in an accountability system.

Analysis by Locus of Authority

Patterns within the data begin to emerge as structures of state education governance are applied. Descriptions and data from the ECS *Clearinghouse Note* entitled "State Authority To Control the Schools" were used to analyze the data by locus of authority. Table 6 defines the categories of centralized, moderately decentralized and decentralized state authority.

Table 6: State Authority to Control the Schools

This table describes the various degrees of state control as defined by state laws and constitutions.

CENTRALIZED DECISIONMAKING	MODERATELY DECENTRALIZED DECISIONMAKING	DECENTRALIZED DECISIONMAKING
<p>Typical features:</p> <ul style="list-style-type: none"> Statewide prescription of course of study and textbook adoption State code narrow or restrictive: unless local district is given authority, it is presumed not to have authority. 	<p>Typical features:</p> <ul style="list-style-type: none"> State boards and chief state school officers have some authority over curriculum Long-standing, high-stakes test (i.e., New York Regents exam or minimum competency testing, etc.) Elected chiefs/more authority of chief state school officer. 	<p>Typical features:</p> <ul style="list-style-type: none"> Allocation of authority favors local discretion Legislative mandates (i.e., courses) significant but not overwhelming Curricular requirements listed in statute without specifics as to amount of time to be devoted to each course Classification of grade structure left mostly to local districts (i.e., grouping schemes, standards for promotion, grade and grade-level placement) State agency has no real statutory power to control local education program; is there to "assist districts" Modest relationship between weak state authority over curriculum and appointed chief state school officer.

Other areas that may influence: Collective bargaining (policy trust agreements, etc.), special education, bilingual education, charter schools/choice, revision of state education code, finance litigation or other general litigation, state constitutions.
 Source: ECS Information Clearinghouse revisions of 1976 classification done by Tyll van Geel, *Authority to Control the School Program*. Note: Intent of this chart is not to imply that any one classification is better/worse than another. See Appendix A for states listed under each category and the component pattern for each state.

Table 7 groups states by degree of centralization and shows how many components of a performance-based accountability system are common to each group of states. There are 17 centralized states, 10 moderately decentralized states and 23 decentralized states. The percentages are calculated by taking the number of states with each set of components divided by the total number of states in that category.

Table 7: Frequency of Components in Statute by Degree of State Control

Number of Components	Centralized - 17	Moderately Decentralized - 10	Decentralized - 23
Four	7 - 41%	1 - 10%	2 - 9%
Three	7 - 41%	5 - 50%	7 - 30%
Two	2 - 12%	2 - 20%	7 - 30%
One	1 - 6%	2 - 20%	4 - 18%
Zero	0 - 0%	0 - 0%	3 - 13%

The extremes presented by Table 7 are obvious. Forty-one percent of the centralized states have an education accountability system with all four components, about four times the percentage in either moderately decentralized or decentralized states. Thirteen percent of the decentralized states have no performance-based accountability components in statute, while the percentage stands at zero for the other two categories.

Trends noticeable in this table include:

- ◆ Centralized states have more systems with four components than any other category.
- ◆ Moderately decentralized states favor systems with three components, usually choosing not to include rewards.

In general, the majority of states with complete accountability systems are those with centralized authority to control schools. Where states are decentralized or have local control of authority, nearly half have only

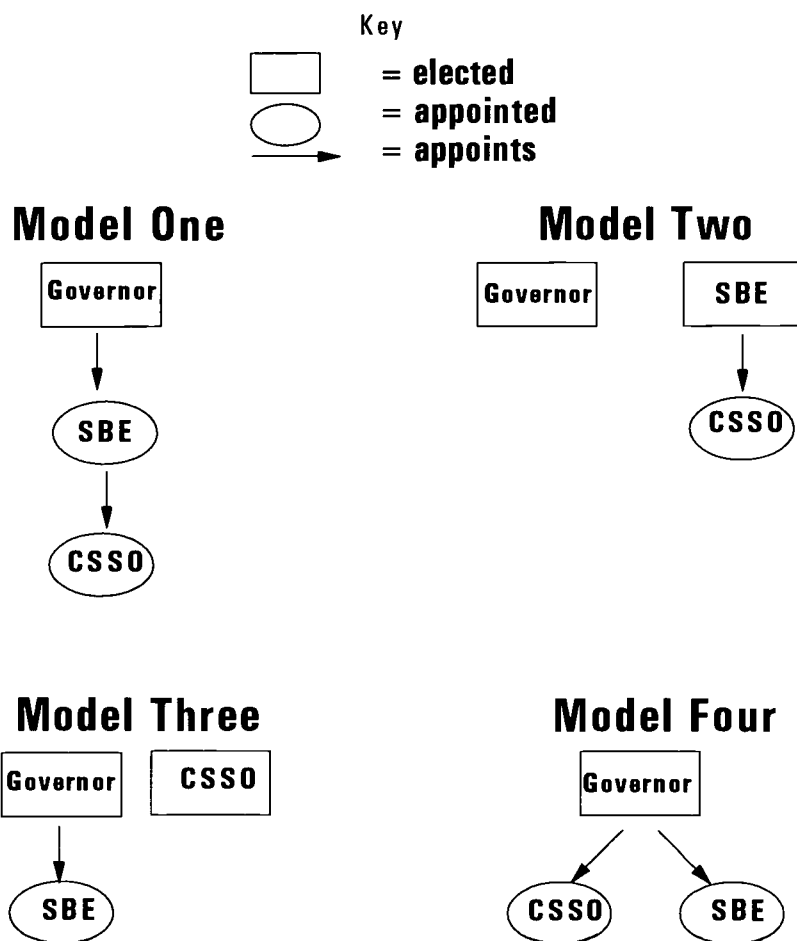

one or none of the four components. The struggle between centralized government and local control has indeed had an impact on the creation and growth of performance-based accountability systems.

Analysis by Models of Governance

Governance structure models (see Figure 1 below) developed by Campbell and Mazzoni also were used to analyze the use of performance-based accountability systems (see Appendix B for more information). These four models focus on the policymaking components of the state education agency — the chief state school officer (CSSO) and the state board of education (SBE) — and on the formal links between these roles and the governor's office.

Figure 1

Basic Models of Education Governance

No particular trends were evident when Models 2 and 4 were compared with whether a state was decentralized, moderately decentralized or centralized. There were, however, some interesting trends when similar comparisons were made using Models 1 and 3. These comparisons are detailed in the tables and analyses below.

Model 3 is defined by an elected chief state school officer and governor, with the governor appointing the state board of education. It is the only model in which the chief is elected.

Table 8: COMPARISON — Model 3 Governance Structure and Locus of Authority

Key: 1 - standards and assessments; 2 - multiple indicators; 3 - rewards; 4 - sanctions

Centralized			Moderately Decentralized			Decentralized		
State	Statute	Statute/ Regulation	State	Statute	Statute/ Regulation	State	Statute	Statute/ Regulation
Arizona	1-2-3	1-2-3	California	1-2	1-2	Idaho	2	1-2
Georgia	1-2-3-4	1-2-3-4	Oklahoma	1-2-4	1-2-4	Montana	0	0
Indiana	1-2-3-4	1-2-3-4	Oregon	1-2-4	1-2-4	N. Dakota	0	0
N. Carolina	1-3-4	1-2-3-4				Wyoming	0	0

Three things are noticeable in Table 8. First, the number of components states use in an accountability system is directly related to how centralized or decentralized the education system is. Second, centralized states using this model tend to have complete systems with four components. Third, moderately decentralized states all have three-component systems with rewards as the missing component. Finally, decentralized states tend to have no accountability system.

Model 1, as analyzed in Table 9, is defined by an elected governor appointing the state board of education, which, in turn appoints the chief state school officer. It is the only one of the four models in which the chief is appointed by an appointed board of education.

Table 9: COMPARISON — Model 1 Governance Structure and Locus of Authority

Key: 1 - standards and assessments; 2 - multiple indicators; 3 - rewards; 4 - sanctions

Centralized			Moderately Decentralized			Decentralized		
State	Compo- nents in Statute	Compo- nents in Statute/ Regulation	State	Compo- nents in Statute	Compo- nents in Statute/ Regulation	State	Compo- nents in Statute	Compo- nents in Statute/ Regulation
Arkansas	1-2-4	1-2-4				Alaska	1-2-4	1-2-4
Kentucky	1-2-3-4	1-2-3-4				Connecticut	1-3-4	1-2-3-4
West Virginia	1-2-4	1-2-4				Illinois	1-2-3-4	1-2-3-4
						Maryland	1-3	1-2-3-4
						Massachusetts	1-2-4	1-2-4
						Missouri	1-2-4	1-2-4
						New Hampshire	1-2	1-2
						Rhode Island	1-2-4	1-2-4
						Vermont	1-4	1-4

Three things are again noticeable in Table 9. First, of the 12 states using Model 1, four have a rewards component, but unlike Model 3 (Table 8), they predominantly appear in decentralized states rather than centralized. Second, the majority of states with four components now appear in decentralized states, not centralized. Finally, there are no moderately decentralized states that use Model 1 as a governance structure.

The comparisons show a fairly logical connection. Complete systems will appear in the type of centralization that the governance model is primarily designed to support. Model 3 is a tightly controlled structure with two elected officials holding power over an appointed board, thereby centralizing the power. States that have a centralized locus of control logically would move toward completion of an accountability system more quickly using this model.

Model 1 is a more loosely controlled structure with an elected governor appointing a board that in turn appoints the chief state school officer. Power is diffused through a larger number of people at the top of this structure, so states with a decentralized locus of authority logically would move toward a complete system using this model. The progress toward a complete system may not be as quick as in centralized states using Model 3, however, because decentralized states are more dedicated to the philosophy of local control and would not tend to move toward a state accountability system quickly no matter which governance model is in place.

CONCLUSION

Original data for this project were collected over a period of six months in spring 1997 and updated through January of 1999. After searching statute books, online databases and state World Wide Web sites, researchers made phone calls to state departments of education in 28 states to check data or secure more information that would make each state profile as accurate as possible in Tables 1 and 3. Information was updated in January 1999.

These phone calls brought a human aspect to both the details and patterns that the tables display. In all cases, individuals contacted seemed genuinely proud of education in their states and were looking forward to changes that would improve the education provided to their citizens. They also spoke about three problematic items that also became more apparent as the data were analyzed. Those problems were: (1) the nonalignment of system components, (2) the differences resulting from placing some components in statute and others in regulation, and (3) the absence of rewards in many accountability systems.

Nonalignment of System Components

The issue of nonalignment presented itself both in data analysis and in phone conversations with state superintendents, state education department staff and experts connected with state legislatures. First, systems that seemed to be complete in the data showed weaknesses when statute number sequence was analyzed. Careful reading of the statute showed that in some cases, multiple indicators were from a previous report card system, sanctions were tied to a previously existing accreditation system based on inputs rather than outcomes of student learning, or what appeared to be standards was simply the original mandate for curriculum frameworks or basic required curricula for graduation.

Also, in many cases, the state testing system was not yet aligned with new state content standards. If these systems are not aligned, they become confusing and cumbersome for educators at all levels who must implement and use them.

Statute vs. Regulation

The differences caused by placing some components in statute and others in regulation may prove to be minimal. Having to search both state code and regulation to complete the data collection proved to be both difficult and confusing. Many phone conversations centered around this issue, although confusion was usually resolved with one or two contacts in each state.

In talking with an education department staff person in Kansas, a state whose system is all in regulation except for standards and assessments, this question finally surfaced: "Do components in regulation have the same 'teeth' as components in statute?" Accountability systems are complex and costly, and if the power to implement and maintain the system is not present, even a well-planned system could prove ineffective. The Kansas staffer observed that in that state, *where* the accountability system was placed did not seem to be an issue. All Kansas school districts are in compliance with the system, and there have been no court challenges. Kansas has a decentralized locus of authority. Are regulation and statute power perceived in the same way within states that are moderately decentralized or centralized?

Absence of Rewards

Finally, rewards appear to be the absent component in many state accountability systems. There are 10 states with complete (1-2-3-4) systems in statute, aligned and unaligned. If the systems described as 1-2-4 were to add rewards, nearly half of the states would have complete systems. Several problems exist, however, in the creation of this component.

First, experts disagree on whether incentives and rewards are effective in public education. They often produce changes in behavior and practice, but there is question as to whether these changes are permanent or transitory.

Second is the issue of fairness. Rewards must be based on indicators that are valid and reliable. They also must be awarded and disseminated in a manner that is perceived as fair by all those eligible for the rewards.

Finally, there is the issue of trust. A reward is somewhat like holding a carrot in front of a horse. What happens when the carrot disappears? The reward component and the initial appropriation of funds must be sustained over time if educators are to perceive rewards as useful and valuable.

People in several states shared information and opinions about rewards in phone conversations. The component is being considered in many of the states that have a 1-2-4 system, but the words state officials used to describe how the process was proceeding were "carefully" and "cautiously." In many ways, the other three components in an accountability system deal with students. The rewards component deals directly with adults, particularly with teachers. People in many states, including California and New York, said they are working on the issue.

Questions for Future Study

1. How does the governance structure of a state affect creation of an education accountability system?
2. What factors or characteristics of a state, including governance models and locus of control, affect the design of these systems?
3. How is implementation of an accountability system affected by these factors or characteristics?
4. If system components are aligned, that is, if they use the same measures of student learning, do educators perceive them to be more equitable?
5. Are systems where all components are fully aligned more successful in improving student achievement than nonaligned systems?

APPENDIX A

State Authority to Control the Schools

This table more fully describes the various degrees of state control as defined by state laws and constitutions. Also listed is the component pattern in each state as it appears in the statute only.

Key: 1 - standards and assessments; 2 - multiple indicators; 3 - rewards; 4 - sanctions

CENTRALIZED DECISIONMAKING	MODERATELY DECENTRALIZED DECISIONMAKING	DECENTRALIZED DECISIONMAKING

APPENDIX B

Education Governance Structures in the 50 States

States that conform to a basic model:

MODEL ONE (12 states)	MODEL TWO (8 states)	MODEL THREE (11 states)	MODEL FOUR (9 states)
Alaska	Alabama	Arizona	Delaware
Arkansas	Colorado	California	Iowa
Connecticut	Hawaii	Georgia	Maine
Illinois	Kansas	Idaho	Minnesota
Kentucky	Michigan	Indiana	New Jersey
Maryland	Nebraska	Montana	Pennsylvania
Massachusetts	Nevada	North Carolina	South Dakota
Missouri	Utah	North Dakota	Tennessee
New Hampshire		Oklahoma	Virginia
Rhode Island		Oregon	
Vermont		Wyoming	
West Virginia			

States that do not conform to the basic model:

Florida — The state board of education (SBE) consists of seven elected cabinet members: the governor, secretary of state, attorney general, comptroller, treasurer, commissioner of agriculture and chief state school officer (CSSO).

Louisiana — Eight state board members are elected, and the governor appoints three members. The SBE appoints the CSSO.

Mississippi — The governor appoints five SBE members, while the lieutenant governor and speaker of the house each appoint two members. The SBE appoints the CSSO.

New Mexico — Ten SBE members are elected, and the governor appoints five. The SBE appoints the CSSO.

New York — The state legislature elects SBE members, and the SBE appoints the CSSO.

Ohio — State board is a hybrid, with 11 members elected and eight appointed by the governor with the advice and consent of the senate.

South Carolina — Legislative delegations elect 16 SBE members, and the governor appoints one SBE member. The CSSO is elected.

Texas — The SBE is elected, and the governor appoints the CSSO.

Washington — Local school boards elect SBE members, and the CSSO is elected by the citizenry.

Wisconsin — There is no SBE, and the CSSO is elected.
