IDENTIFIERS *Florida State Student Assessment Test

ABSTRACT

The Student Assessment and Minimum Student Performance Standards Sections of the Florida Department of Education present the results of the April and October 1981 administrations of the State Student Assessment Test, Parts I (basic skills) and II (application of basic skills). Grades 3, 5, 8 and 11 were measured on minimal performance in the basic skills area of reading, writing, and mathematics. Across the tested grades, students did very well on many of the State Student Assessment Test, Part I standards, and performance was adequate on others. Some Mathematics standards were more difficult for all grade levels than were the majority of reading and writing standards. In Communication Skills, only the eleventh-grade writing standard that required students to punctuate correctly, the two eighth-grade reading logical thinking standards, and the fifth grade standard of determining the main idea of a message had mastery rates of below 70 percent. In Mathematics, less than 70 percent mastery rate was achieved by fifth graders in solving the practical problems of whole numbers and money and of interpreting graphs. Eighth graders had difficulties with solving money problems, and adding and subtracting fractions; and eleventh graders, multiplying fractions. (Author/PN)

PREFACE

The Florida Department of Education is responsible for establishing the Minimum Student Performance Standards which students are expected to master, determining student achievement of these standards, and communicating the results to citizens of Florida. This document, the State and District Report of Results, 1981-82, is an annual report which describes student achievement on these minimum standards. It provides results for the State and districts for both the State Student Assessment Test, Part I (basic skills) and Part II (application of basic skills).

The standards and skills that are measured and reported are ones that have been developed by educators throughout the State working with Department of Education personnel. These standards and skills measure minimal performance in the basic skills areas of reading, writing, and mathematics.

Grades three, five, eight, and eleven were tested on the State Student Assessment Test, Part I (SSAT-I) in October 1981 and the results are reported in this report. For the first time, the SSAT-II was administered to tenth grade students in April 1981 and these results are also reported in this publication. The eleventh and twelfth grade results for the SSAT-II administered October 1981 are also reported herein. The SSAT-II October 1981 administration for eleventh and twelfth graders includes students new to the State and those who had not previously passed the test.

ABSTRACT

A major focus of Florida's Accountability Act of 1976 was on obtaining meaningful data concerning student achievement for educators, legislators, parents, citizens, and students. This document, reporting the results of the April and October 1981 test administrations of the State Student Assessment Test, Parts I and II, has been prepared for this purpose by the Student Assessment and Minimum Student Performance Standards Sections of the Department of Education.

Similar to the 1980 results, the 1981 tenth-grade test results of the State Student Assessment Test, Part II (SSAT-II) Communication Skills subtest are positive. Ninety-five percent of all tenth graders in the State passed the Communication Skills subtest. However, performance on the Mathematics subtest was not as high: only 78 percent of the tenth graders passed this subtest.

Across grades three, five, eight, and eleven, students did very well on many of the State Student Assessment Test, Part I (SSAT-I) standards, and performance was adequate on others. Some Mathematics standards were more difficult for all grade levels than were the majority of reading and writing standards. In Communication Skills, only the eleventh-grade writing standard that required students to punctuate correctly, the two eighth-grade reading logical thinking standards, and the fifth grade standard of determining the main idea of a message had mastery rates of below 70 percent. In Mathematics, less than 70 percent mastery rate was achieved by fifth graders in solving the practical problems of whole numbers and money and of interpreting graphs. Eighth graders had difficulties with solving money problems, and adding and subtracting fractions; and eleventh graders, multiplying fractions.

CHAPTER I

INTRODUCTION

Background

The Florida Legislature expanded the role of the Department of Education through the Educational Accountability Act of 1976. Responsibilities of the Department were enlarged to include the development and measurement of Minimum Student Performance Standards for certain minimum competencies in the basic skills of reading, writing, and mathematics in grades three, five, eight, and eleven. The legislation also provided for the development and administration of a test for eleventh grade students (which is now administered in the spring of the tenth grade). Passage of this test will become a requirement for receiving a regular high school diploma in the 1982-83 school year.

The Minimum Student Performance Standards Section of the Division of Public Schools is responsible for establishing the standards on which students are tested. These minimum competencies were established with participation from educators and lay persons throughout the State and were approved by the State Board of Education in 1977. For compliance with the 1976 legislation which mandated passage of a functional literacy test prior to receiving a regular diploma, functional literacy is defined as "the satisfactory application of basic skills in reading, writing, and mathematics to problems and tasks of a practical nature as encountered in everyday life."

The Student Assessment Section of the Division of Public Schools developed tests designed to measure the achievement of the Minimum Student Performance Standards and application of the basic skills to everyday problems. The State Student Assessment Test, Part I (SSAT-I) was administered to Florida public school students in grades three, five, eight, and eleven in October 1981. This test measures the minimum standards and skills for the beginning of grades three, five, eight, and eleven. The State Student Assessment Test, Part II (SSAT-II) measures the application of basic skills for the beginning of eleventh grade, but the administration of this Part II test was moved to spring of students' tenth grade, April 1981.

A major focus of the Accountability Act was to obtain meaningful data concerning student achievement for educators, legislators, parents, citizens, and students. Toward this end, the Minimum Student Performance Standards and Assessment Programs provide student achievement information concerning the attainment of the state-adopted Minimum Student Performance Standards and skills. This information is provided in the form of individual student reports, classroom and school reports provided for teachers and principals, and numerous reports for districts. In addition, documents such as the present one are prepared to provide district and state achievement results, standard-by-standard and skill-by-skill.

Standards and Skills

In April 1977, the State Board of Education adopted a set of Minimum Student Performance Standards. The Minimum Student Performance Standards were developed by the Department of Education Minimum Student Performance Standards Section with wide involvement of local district educators across the State. The standards reflect a desired minimum achievement in the "3 R's" at the beginning of grades three, five, eight, and eleven.

There are "skills" related to each Minimum Student Performance Standard. Each skill, in turn, is measured by several test questions, usually four or five. The test questions are constructed to reveal whether or not students have "mastered" the minimum standards and skills. Figure 1 shows the relationship of skills to a standard and questions to a skill.

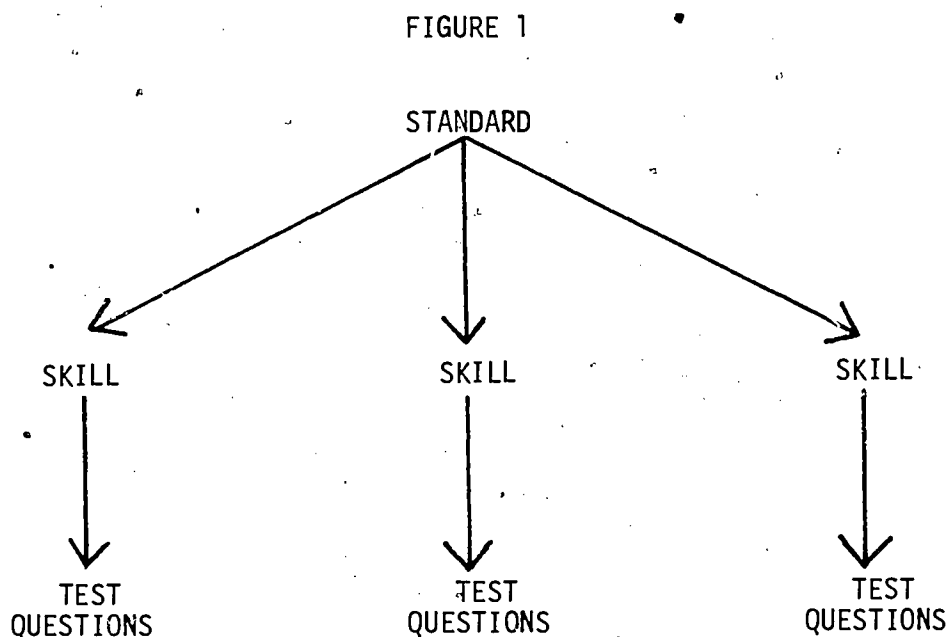

Table 1 presents the number of standards, skills, and questions included on the SSAT, Parts I and II, at each grade level tested, for reading, writing, and mathematics. The subtests of Communication Skills (reading and writing) and Mathematics on the SSAT-II are considered standards. Hence, only the number of skills and questions are listed in Table 1 for the SSAT-II.

Criteria for Mastery

Mastery of Skills

A major problem in establishing a passing criterion is determining the minimal number of correct answers necessary to classify

a student as being a master or a nonmaster of a skill. Factors to be considered include (1) the probability that a student could guess enough answers to achieve the skill, (2) the probability that a student has the skill but makes an occasional careless error, (3) the philosophy that a student who has mastered a skill should be able to do it repeatedly, (4) the possibility that a student may have the skill but be so unfamiliar with a particular form of a test question that it is answered incorrectly, and (5) practical considerations of length of the test and time required to complete it.

Because all achievement tests are subject to certain measurement errors, a probability exists that a student may be misclassified. It is possible, with a great deal of assurance, to identify as nonmasters the poorer performing students who attain few or none of the questions measuring a skill. The greatest problem in classifying students on a particular skill occurs with the borderline master--the student who scores close to the criteria that determine master or nonmaster status.

To eliminate the problem of misclassifying an actual nonmaster as a master, some educators believe that a master of an objective is one who can demonstrate the skill repeatedly. These educators would demand criteria of achievement of 100%; that is, a master should be able to exhibit the skill correctly every time. Others point out that such perfection is rarely realized. In trying to combine these two aspects of determining mastery and nonmastery, the following criteria are used to determine and report mastery of a skill for the State Student Assessment Test, Parts I and II:

<u>When The Number Of Questions To Measure A Skill Is As Follows:</u>	<u>The Minimum Number Of Questions Required To Be Answered Correctly Shall Be As Follows:</u>
2	1 of 2
3	2 of 3
4	3 of 4
5	4 of 5
6	5 of 6
7	5 of 7
8	6 of 8
9	7 of 9
10	7 of 10
11	8 of 11
12	9 of 12
13	10 of 13
14	10 of 14
15	11 of 15
16	12 of 16

These procedures for governing mastery of skills are applied uniformly regardless of the number of choices presented the student through the multiple choice items. Theoretically, questions with fewer choices result in a higher probability of guessing the correct answers. However, since a vast majority of the questions contain four choices, this factor has been disregarded.

The net effect of these procedures for scoring the tests for individual skills is to strike a reasonable balance between accuracy of classification, possibility of guessing, and practical test length. To achieve mastery status the student is required to demonstrate proficiency repeatedly, but not 100% achievement. However, since not all possible questions in a skill area can be asked (e.g., not all multiplication problems), it is not possible to be perfectly certain that a "master" can indeed correctly solve every problem he/she may face in school or real-life even when repeated proficiency has been demonstrated on the test.

Mastery of Standards

Florida students are expected to show mastery of all Minimum Student Performance Standards. However, it would be unreasonable to expect students to answer correctly every test question. For this reason, it is necessary to determine rules for judging attainment of the standards.

By action of the State Board of Education in August 1978, the criteria for mastery of each standard of the State Student Assessment Test, Part I were established as follows:

<u>When The Number Of Questions To Measure A Standard Is:</u>	<u>The Minimum Number Of Questions Required To Be Answered Correctly Shall Be:</u>
2	1
3	2
4	3
5	4
6	5
7	5
8	6
9	7
10	7
11	8
12	9
13	10
14	10
15	11
16	12
17	12
18	13
19	14
20	14
21	15
22	16
23	17
24	17
25	18

To pass the State Student Assessment Test, Part II, a student must successfully complete both the Communication Skills Standard and the Mathematics Standard by correctly answering, on any one administration of the test, the following number of required items per standard:

When The Number Of
Questions To Measure
A Standard Is:

The Minimum Number Of
Questions Required To
Be Answered Correctly
Shall Be:

CHAPTER II

STATE AND DISTRICT RESULTS FOR 1981-82

Overview of Data in Report

This chapter provides a summary discussion of the SSAT-I results for each grade tested and for the tenth grade SSAT-II. These brief analyses are followed by (1) a discussion of important points to consider when interpreting the data and (2) data provided in the appendices.

Although the SSAT-I is a series of mini-tests and not a single pass-fail test, students are expected to master all of the standards. A useful single numerical index is the "Quarter Four Report." This report is shown on page 14 as the percent of students passing 76 to 100 percent of the Minimum Student Performance Standards. It would be desirable to have as many students as possible master 76 to 100 percent of the standards; but 70 percent has been used in this publication for discussion of the Quarter Four Report, as well as the other results, as an indicator of adequate, or at least, not failing, performance.

Several sets of data are provided in the appendices and are presented in three ways. The first two appendices (A and B) include a list of the standards and skills with a graphic display of the percent of students in the State responding correctly to each standard or skill. The next two appendices provide the results for each district on each of the Minimum Student Performance Standards (Appendix C) and the related skills (Appendix D). The Quarter Report for each district is also included in Appendix C. In contrast to the Quarter Four Report noted above, the information in the Quarter Report in Appendix C provides the percents of students who mastered the specified percent of standards in six categories. The categories for this chart are 0, 0-25, 26-50, 51-75, 76-100, and exactly 100 percent of the standards. (An interpretive example is provided on the Appendix C title page.) The third presentation of data lists the percent of students passing the State Student Assessment Test, Part II (SSAT-II) on both the Mathematics and Communication Skills standards (Appendix E).

The standards and skills listed in Appendices A and B are presented by grade level, by subject area, and by broad content category. To aid in interpreting the graphs in the appendices and the discussion of the results included in this chapter, the standards and skills measured on SSAT-I have been grouped into broad content categories. In Communication Skills, the categories are:

For the reading subtest--*Vocabulary, Reading Comprehension,
Logical Thinking, Study Skills*

For the writing subtest--*Organization; Spelling, Punctuation, Capitalization; Grammar and Sentence Composition; Supplying Information*

For the Mathematics test, the skills and standards have been grouped by:

Number Concepts, Computation, Practical Problems, Measurement, Fractions, and Decimals

Also, in Appendices A, B, C, and D, the Minimum Student Performance Standards and related skills are listed by letter, indicating the standard, and/or by number which signifies the skill.

It should be remembered in examining all of the results provided in this publication that investigation of many variables is necessary for a complete evaluation of school programs. The 1981 test results, however, do provide information to help determine an instructional system's needs and provide a base for a more complete longitudinal evaluation or study.

Test Results Summaries

State Student Assessment Test, Part I Results by Standards

In reviewing the results of the October 1981 testing of standards for third grade, students did very well in Communication Skills with performance at an 82 percent or above mastery rate on 12 of the 13 reading and writing standards. The exception was on Standard J--recognize irrelevant and invalid statements--on which 79 percent of the students succeeded. In mathematics, third graders were tested on nine standards. Eighty-nine percent or more mastered seven of these nine. Standards E and V (determine equivalent forms of fractions, decimals, and percents; and solve money problems) were the two standards on which only 74 and 71 percent of the students passed.

Eleven Communication Skills standards were mastered by 87 percent or more of the students in grade five. Determining the main idea (Standard E) was the only standard in fifth grade Communication Skills on which less than 70 percent of the students passed. Standard C in reading and Standards C and H in writing were the standards with the next highest percent passing. Seventy-eight percent mastered reading Standard C (determine word meaning from word parts and context); 77 percent passed writing Standard H (punctuate correctly); and 72 percent passed writing Standard C (write a paragraph expressing ideas clearly). Fifth graders did not do as well in mathematics even though at least 81 percent of the students mastered 11 of the 15 mathematics standards. Solving money problems (Standard V) and interpreting graphs, tables, and maps (Standard X) were the two standards that were the most difficult for fifth graders with only 50 and 58 percent passing these standards..

Eighth graders were tested on 16 Communication Skills standards, and at least 84 percent of the students mastered 13 of these standards. The reading standards classified under the logical thinking category were the only two on which less than 70 percent of the students passed: only 69 percent of the students mastered reading Standard I (recognize fantasy, fact and opinion), and 68 percent mastered Standard J (recognize irrelevant and invalid statements). In the writing area, the lowest percent mastery was on Standard H (punctuate correctly) which only 77 percent of the students mastered.

In mathematics, the eighth graders' achievement was adequate on number concepts (Standards C and E); computation with whole numbers in all operations (Standards F, G, H, and I); adding and subtracting decimals (Standard L); and solving real world whole-number problems, measurement problems, and interpreting graphs (Standards T, W, and X). Performance was 61 percent or below on only two of the 14 mathematics standards, Standards J and V (adding and subtracting fractions and solving money problems). Seventy percent or more of the eighth grade students mastered all but these two mathematics standards.

Eleventh grade students did well, with at least an 80 percent mastery rate, on all but one of the Communication Skills standards. In that one instance, only 55 percent of the eleventh grade students mastered writing Standard H (punctuate correctly). Otherwise, at least an 80 percent mastery rate was attained for all reading and writing standards.

In mathematics, at least 82 percent of the eleventh grade students mastered all but two of the 11 standards. Only 63 percent of the eleventh graders were able to multiply fractions, the most difficult standard (Standard K); and only 72 percent were able to solve real-world problems involving fractions, decimals, and percents (Standard U).

In summarizing performance on the standards, the mastery rate was far above the 70 percent level on many of the standards in both Communication Skills and Mathematics. Students in all grades did very well on the majority of Communication Skills standards. In this area, students had the most difficulty (less than 70 percent mastery) with a reading comprehension standard at fifth grade, two logical thinking standards at eighth grade and a writing standard at eleventh grade. These content areas accounted for only four standards (out of the sum of all standards tested at each grade level) on which student performance in Communication Skills was less than 70 percent. In Mathematics, student achievement was less than 70 percent mastery on several standards. Performance on three standards at fifth grade, two at eighth and one at eleventh grade fell below 70 percent mastery. (See Appendix A for graphic display of results on the Minimum Student Performance Standards.)

Basic Skills Test Results by Grade

Third Grade

Ninety percent or more of the third grade students mastered seven of the ten reading skills tested in October 1981. At least 91 percent mastered the three vocabulary skills. In the reading comprehension category, 93 percent of the students mastered two of the skills, and 84 percent mastered the third skill of identifying story outcomes. The third graders did not do as well on the logical thinking category. Ninety percent were able to distinguish between real and unreal, but only 79 percent could identify an irrelevant sentence in a selection. Performance was better in the study skills category with 87 percent of these students able to follow written directions to complete a task and 90 percent able to put words in alphabetical order by first letter.

In writing, at least 96 percent mastered two of the organization skills, but only 82 percent could dictate a logical sequence of events from pictures. Third graders did very well in the category of spelling, punctuation, capitalization with 93 and 96 percent mastering the two skills in this category.

In mathematics, 90 percent or more of the third graders mastered eight of the 14 skills. Two number concepts skills; three skills in computation with whole numbers, one in measurement and two of the practical problems skills were mastered by at least 90 percent of these students. However, only 71 percent of the students were able to subtract to solve practical money problems under 50 cents (a practical problem category) and 74 percent mastered identification of halves, thirds, or fourths (a number concepts skill). Three of the four skills on which 80 through 89 percent of the students succeeded were subtracting basic combinations (82 percent mastery), subtracting 2-digit numbers without borrowing (81 percent mastery), and solving word problems involving subtraction (89 percent mastery). These three skills were spread across two categories and point to a problem with subtraction. Telling time on the hour and half-hour was the fourth skill in the 80 percent interval (with an 87 percent mastery rate) and is in the measurement category.

Fifth Grade

At fifth grade, students did well on two of the three vocabulary skills with 90 and 96 percent mastery rates. However, only 70 percent of these students succeeded in identifying appropriate prefixes and suffixes, the third skill in the vocabulary category. In the reading comprehension category, performance was below 70 percent on one skill, determine the main idea in a paragraph. In the other skills of this category, two skills had a performance rate of 82 and 87 percent (determine the order of details in a selection and identify sentences with similar meanings). On the seven remaining skills of the reading comprehension, logical thinking, and study skills categories, 89 percent or more of the students were successful.

In writing, there is a similar pattern for fifth graders, with only one of all the skills, the organization skill of identifying regular plural forms of nouns, having less than a 70 percent mastery rate (68 percent). Seventy-two percent of the fifth grade students could arrange sentences in a meaningful paragraph, an organization skill. Otherwise, at least 89 percent mastered the additional three skills in this category. Ninety-three percent mastered the one skill in the supplying information category, and at least 87 percent of the fifth graders succeeded on five of the six skills in the spelling, punctuation, capitalization category.

Fifth graders did very well in the number concepts category of mathematics with 89 percent mastering one skill and 90 percent or more of the students mastering the other six skills in this category. There were two skills in the computation with whole numbers category with only 72 and 78 percent of the students passing the skills of dividing a 3-digit by a 1-digit number with no remainder and subtracting two 4-digit numbers with borrowing. The fifth grade students performed at the 87 percent mastery rate or above on the other five skills in computation with whole numbers. They did almost equally as well in other categories of computation with fractions, measurement, and some skills in practical problems. However, in this latter area, less than 60 percent of the students were able to master the three skills of (1) solving word problems by subtracting two 3-digit numbers, (2) solving purchase problems involving change from \$1.00, and (3) finding information in graphs.

Eighth Grade

Eighth graders did well in the vocabulary category. The skill having the lowest percent of mastery (78 percent) asked students to associate appropriate inflected words in context and was not tested the previous year. At least 84 percent of the students mastered the other three skills in the vocabulary category. Eighty percent or more of the students mastered the five reading comprehension skills, and at least 85 percent mastered the skills in the study skills category. The greatest difficulties appear to be in the logical thinking category in identifying facts and opinions (69 percent mastery) and identifying conclusions based on insufficient evidence (68 percent mastery).

In writing, there was at least an 84 percent mastery rate for eighth graders on all but two skills. These skills, identifying plural forms of nouns (74 percent mastery) and using the comma to separate proper names (65 percent mastery), were included in the grammar and sentence composition and spelling, punctuation, capitalization categories.

There appear to be several difficult areas in eighth-grade mathematics achievement. Two skills in number concepts, identifying (1) equivalent proper fractions and (2) decimals and percents equal to proper fractions,

had only a 67 and 50 percent mastery rate. The students did much better on the computation with whole numbers category with at least 83 percent mastery on all four skills and had a low mastery rate on only one skill of the computation with whole numbers and decimals category, dividing a decimal by a multiple of 10 (55 percent mastery). The computation with fractions category requires the greatest improvement because the percent of students succeeding on these three skills ranged from 52 to 76. There was only one difficult skill in the practical problems area, solving problems involving comparison shopping (61 percent mastery), and at least 79 percent of the eighth graders mastered the other five practical problems skills.

Eleventh Grade

The eleventh grade students did very well on all of the skills in the reading categories with between 80 and 90 percent of the students achieving seven of the skills, and 90 and 97 percent achieving the other seven reading skills. Eighty-four percent was the lowest mastery rate in the vocabulary category. At least 87 percent of the students mastered the other four skills in this category. In reading comprehension, only 80 percent of the eleventh grade students mastered the skill of determining the order of details in a selection, but at least 92 percent mastered the three additional skills in this category. The logical thinking category was the most difficult category for eleventh graders (as it was for the other grades) even though at least 81 percent of the eleventh grade students succeeded on the three skills used to measure this category. In the study skills category, 89 percent of the students were able to identify dictionary definitions of words used in context, and 94 percent were able to follow written directions to complete a task.

Performance on the writing skills was not as high. The eleventh graders did well on the one skill in sentence composition (97 percent mastery). At least 80 percent of the eleventh graders succeeded on four of the five skills in the spelling, punctuation, capitalization category; but only 42 percent were successful in using an apostrophe for possessive nouns not ending in "s."

In mathematics, the eleventh graders' performance varied in the number concepts category. Only 67 percent mastered the skill of identifying decimals and percents equal to common fractions, and 76 percent were able to round a mixed number to the nearest whole number while 81 percent were able to round numbers with no more than three decimal places. Ninety-five or 96 percent of the eleventh graders were able to master the three remaining skills. Two skills in the category of computation with whole and mixed numbers were difficult for eleventh graders because only 63 and 69 percent of the students were able to multiply a whole number and a mixed number and to subtract a whole number and a mixed number. These students did well, however, on the two skills in the computation with whole numbers category. Performance on the skills in the remaining three categories of computation with decimals, computation with percents, and practical problems were varied with one of the two skills in each category having at least an 84 percent mastery rate and the second skill in each category having a mastery rate between 72 and 75 percent.

State Student Assessment Test, Part II Results

The tenth grade students tested in the spring of 1981 did quite well on the reading portion of the Communication Skills standard of the State Student Assessment Test, Part II (SSAT-II). Distinguishing between facts and opinions was the most difficult skill with 83 percent of the students mastering this skill. Determining the main idea inferred from a selection and identifying an unstated opinion had mastery rates of 86 and 89 percent. At least 90 percent of the tenth graders succeeded on the other five reading skills.

In writing, 86 percent of the tenth grade students were able to complete a check and its stub accurately. Ninety-two percent and 96 percent mastered the other two writing skills related to (1) including necessary information when writing letters and (2) accurately completing forms used to apply for various situations (e.g., employment, credit).

As in other years, performance on the Mathematics standard was not as high as on the Communication Skills standard. While two skills were mastered by 97 and 99 percent of the students, four skills by 82 to 88 percent of the students, and four skills by 71 to 77 percent of the tenth graders, three skills had a passing rate below 70 percent. Determining the solution to real world problems involving comparison shopping was the most difficult skill with 49 percent passing. Solving a problem involving weight had a 50 percent passing rate while only 53 percent of the tenth grade students succeeded in solving problems involving the area of a rectangular region.

Quarter Four Report

The Quarter Four Report is presented as a summary of the State Student Assessment Test, Part I results for the October 1981 test administration. This chart (see total Quarter Four Report in Appendix C) presents in graphic form the percent of students in the State mastering 76 to 100 percent of the Minimum Student Performance Standards for reading, writing, and mathematics at grades three, five, eight, and eleven.

In reading, more than 70 percent of the students mastered at least three-fourths of the standards. Eighty-one percent of the eighth grade students succeeded on 76 to 100 percent of the writing standards as did 77 percent of the third graders. However, there is a serious gap between the writing performances of the third and eighth grade students and the fifth and eleventh graders. Only 57 percent of fifth graders and 51 percent of eleventh grade students mastered at least 76 percent of the writing standards. In mathematics, eighth grade students appeared to have the greatest difficulty because only 64 percent of these students succeeded on 76 to 100 percent of the mathematics standards. At least 74 percent of the students in the other three grades mastered three-fourths of the mathematics standards. Thus, writing standards seem to need improvement at the fifth and eleventh grades and mathematics at the eighth grade.

QUARTER FOUR REPORT OF 1981 RESULTS

Minimum Performance Standards for
Reading, Writing and Mathematics at
Grades 3, 5, 8 and 11
State Student Assessment Test, Part I

Considerations for Interpretation

The results contained in this report describe student performance on skills measured by the 1981-82 assessment tests. These data, without reference to other factors, should not be construed as a complete evaluation of state and district student performance. A comprehensive evaluation of programs requires much additional information.

Districts have a variety of characteristics. A misuse of these data would be to judge a district as effective, or not, based merely on these results. The district's educational goals, curriculum, and community characteristics also need to be considered in such an evaluation.

Other points which might be pertinent when interpreting the results in this report are:

1. The 1981-82 assessment did not measure all goals of education. Only basic skills in reading, writing, and mathematics were included. Within these basic skills, only a portion of them could be tested in the time available. Thus, conclusions should be limited to the specific subjects and skills tested rather than to the entire curriculum.
2. It should be remembered that the standards and skills tested in 1981-82 are minimal standards and skills that each student should attain. Achievement of these basic skills reflects only the first step on the instructional ladder. Educators need to be alert to the fact that these are minimal skills and must continue to provide more advanced learning experiences in a variety of content areas and levels.
3. The 1981-82 Part-I tests administered in October 1981 measured entering skills for the grade levels tested--in other words, skills taught in preceding grades. Consequently, scores are reflective of a school's or district's achievement only if students received at least the previous year's instruction at the specific school in the district.
4. The measured skills tend to form a hierarchy of difficulty. For example, vocabulary skills are prerequisite to, and easier than, comprehension skills which, in turn, precede critical reading skills. Therefore, performance may reflect these varying difficulty levels. Very high percents on the easier skills accompanied by low percents on the more difficult skills would not be unusual.
5. Results in this report are based on attainment of standards and skills, not on items. Achievement of a standard or skill is determined by the number of items answered correctly according to a specified criterion (see Chapter I). It is possible to accumulate high percents on some of the items measuring a skill and still fail to pass a standard.

6. The test results for the performance standards are dependent upon the skills being measured. The mastery rates for the standards will vary to the extent that the skills differ from grade to grade and to the extent that individual skills may be included or excluded from the test in any given year.

With these considerations in mind, examination of the data presented in this report can point to curricular strengths and weaknesses. From such an examination, the need for remedial programs or different allocations of resources may become apparent. The purpose of the Assessment Program is to provide data to aid decision-makers at all levels of educational functioning. Hopefully, utilization of the data in this report will enter into the curricular decisions made throughout the State.

PERCENT OF STUDENTS IN THE STATE RESPONDING CORRECTLY TO SKILLS

1981

GRADES 3, 5, 8 AND 11, SSAT - I

AND

GRADE 10, SSAT-II

Grade 3 - Reading

VOCABULARY

- 1. Identify printed equivalents to orally presented words. 9
- 2. Associate words with words of opposite meaning. 96
- 4. Associate contractions with their component words. 91%

READING COMPREHENSION

- 6. Identify specific details in a selection. 93%
- 7. Determine the stated effect of an action. 93%
- 8. Identify story outcomes. 84%

LOGICAL THINKING

- 9. Distinguish between real and unreal. 90%
- 10. Identify an irrelevant sentence in a selection. 79%

STUDY SKILLS

- 12. Follow written directions to complete a task. 87%
- 14. Put words in alphabetical order by first letter. 90%

Grade 3 - Writing

ORGANIZATION

- 2. Classify objects under appropriate headings. 91%
- 3. Arrange four pictures in a sequential pattern. 96%
- 4. Dictate a logical sequence of events from pictures. 82%

SPELLING, PUNCTUATION, CAPITALIZATION

- 9. Identify correct spelling of common words. 93%
- 13. Capitalize the first word of a sentence. 96%

NUMBER CONCEPTS

- A 1. Count up to 100 objects. 98%
- B 2. Read and write numbers less than 100. 99%
- E 7. Identify halves, thirds, or fourths. 74%

COMPUTATION WITH WHOLE NUMBERS

- F 9. Add three 1-digit numbers (sum less than 19). 98%
- F 10. Add two 2-digit numbers (no carrying). 92%
- G 12. Subtract basic combinations (subtraction facts). 82%
- G 13. Subtract 1-digit from 2-digit numbers (no borrowing). 90%
- G 14. Subtract 2-digit numbers without borrowing. 81%

MEASUREMENT

- O 17. Tell time on the hour and half-hour. 87%
- O 18. Determine the length of an object. 97%

PRACTICAL PROBLEMS

- Q 20. Identify sets of coins equal in value. 93%
- T 21. Solve word problems involving addition. 92%
- T 22. Solve word problems involving subtraction. 89%
- V 24. Subtract to solve practical money problems under 50 cents. 71%

Grade 5 - Reading

VOCABULARY

- A 2. Identify synonyms and antonyms. 96%
- C 4. Identify compound word which fits sentence meaning. 90%
- C 6. Identify appropriate prefixes and suffixes. 70%

READING COMPREHENSION

- D 7. Identify sentences with similar meanings. 87%
- E 8. Determine the main idea in a paragraph. 66%
- F 9. Find specific information in a selection. 98%
- F 10. Determine the order of details in a selection. 82%
- G 11. Identify the stated effect of an action. 96%
- G 12. Determine the cause of an action. 93%
- H 13. Identify story outcomes. 89%

LOGICAL THINKING

- J 16. Identify an irrelevant sentence in a selection. 90%

STUDY SKILLS

- K 18. Follow oral directions to complete a task. 90%
- K 19. Follow written directions to complete a task. 92%

Grade 5 - Writing

ORGANIZATION

- A 2. Identify correct forms of regular verbs in context. 89%
- A 3. Identify regular plural forms of nouns. 68%
- A 5. Select sentence using correct word order. 97%
- A 6. Write question sentences with proper word order. 97%
- C 9. Arrange sentences into a meaningful paragraph. 72%

SUPPLYING INFORMATION

- F 14. Complete simple forms. 93%

SPELLING, PUNCTUATION, CAPITALIZATION

- G 15. Identify correct spelling of common words. 87%
- H 19. Identify correctly punctuated sentences. 92%
- H 20. Identify correctly punctuated abbreviations. 99%
- H 21. Use comma between name of city and state in an address. 75%
- H 22. Use comma between day of month and year in date. 97%
- I 25. Capitalize proper nouns (persons, days, places). 99%

Grade 5 - Mathematics

NUMBER CONCEPTS

- A 1. Count up to 1,000 objects. 99%
- B 2. Match numbers 100 to 9,999 to their word names. 97%
- B 4. Read and write money values through \$5.00. 89%
- C 5. Round whole numbers less than 100 to the nearest ten. 90%
- D 6. Put in order 3 numbers less than 1,000. 90%
- D 7. Identify object's position (11th through 99th). 91%
- E 8. Match fractions to pictures showing fractional parts. 93%

COMPUTATION WITH WHOLE NUMBERS

- F 11. Add four 3-digit numbers with carrying. 87%
- F 12. Add 3-digit numbers to a 1, 2, or 3-digit number. 95%
- G 13. Subtract two 4-digit numbers without borrowing. 94%
- G 14. Subtract two 4-digit numbers with borrowing. 78%
- H 15. Identify basic multiplication facts. 96%
- H 16. Multiply a 1-digit and a 3-digit number. 89%
- I 18. Divide 3-digit by 1-digit number with no remainder. 72%

COMPUTATION WITH FRACTIONS

- J 19. Add two fractions with like denominators. 82%
- J 20. Subtract two proper fractions with like denominators. 86%

MEASUREMENT

- O 21. Identify months of the year in order. 95%
- O 24. Tell time on the hour, half-hour, and quarter-hour. 85%
- O 25. Determine the measurements of objects in metric. 97%

PRACTICAL PROBLEMS

- Q 27. Identify equivalent amounts of money up to \$5.00. 10
- T 28. Solve word problems by adding three 3-digit numbers. 82%
- T 29. Solve word problems by subtracting two 3-digit numbers. 59%
- V 32. Solve purchase problems involving change from \$1:00. 58%
- X 33. Find information in graphs. 50%

Grade 8 - Reading

VOCABULARY

- A 1. Identify synonyms and antonyms. 84%
- C 5. Identify component words of contractions. 97%
- C 6. Choose prefix or suffix so word fits sentence. 93%
- C 7. Associate appropriate inflected words in context. 78%

READING COMPREHENSION

- E 8. Determine the main idea stated in a paragraph. 80%
- E 9. Infer the main idea of a paragraph. 90%
- F 10. Find specific information in a selection. 96%
- F 11. Determine order of events (details) in a selection. 80%
- H 15. Infer feelings and emotions from messages. 98

LOGICAL THINKING

- I 16. Identify facts and opinions. 69%
- J 19. Identify conclusions based on insufficient evidence. 68%

STUDY SKILLS

- K 20. Follow written directions to complete a task. 87%
- M 22. Select dictionary definition for word in context. 85%
- M 23. Use table of contents to find information. 95%
- M 24. Use an index to locate a subtopic. 90%
- M 25. Use directions to locate a place on a map. 90%

NUMBER CONCEPTS

COMPUTATION WITH WHOLE NUMBERS

COMPUTATION WITH FRACTIONS

COMPUTATION WITH WHOLE NUMBERS AND DECIMALS

- L 21. Add 3 numbers, each having fewer than 3 decimal places. 95%
- L 22. Subtract two decimal numbers. 89%
- M 23. Multiply a whole number and a decimal number. 84%
- M 25. Divide a decimal (10th or 100th) by a multiple of 10. 55%

PRACTICAL PROBLEMS

- T 41. Solve word problems by multiplying 2-digit and 3-digit numbers. 79%
- T 42. Change a word problem to a number sentence. 81%
- V 45. Solve problems involving comparison shopping. 61%
- W 46. Add or subtract to solve linear measurement problems. 86%
- W 48. Add or subtract to solve weight problems. 88%
- X 49. Find information in graphs. 99%

Grade 11 - Reading

VOCABULARY

- A 1. Identify synonyms and antonyms. 90%
- A 3. Identify literal definitions of words. 84%
- B 5. Use context to determine word meaning. 90%
- C 7. Chose prefix or suffix so word fits sentence structure. 87%
- C 8. Associate inflected words in context. 94%

READING COMPREHENSION

- E 10. Infer main idea of a paragraph. 94%
- F 13. Determine the order of details in a selection. 80%
- H 18. Infer feelings and emotions. 92%
- H 19. Identify outcomes based on inferences. 96%

LOGICAL THINKING

- I 20. Identify facts and opinions. 88%
- J 22. Identify an irrelevant statement in a selection. 81%
- J 23. Identify conclusions based on insufficient evidence. 86%

STUDY SKILLS

- K 25. Follow written directions to complete a task. 94%
- M 27. Identify dictionary definition of word used in context. 89%

SENTENCE COMPOSITION

- B 2. Identify appropriate headings for groups of words and phrases.

SPELLING, PUNCTUATION, CAPITALIZATION

- G 22. Identify correct spelling of common words.
- G 25. Apply rule for adding prefixes and suffixes.
- H 29. Use apostrophe for possessive nouns not ending in "s".
- H 30. Identify proper punctuation before conjunctions.
- I 31. Capitalize proper nouns.

Grade 11 - Mathematics

NUMBER CONCEPTS

- C 1. Round numbers with no more than three decimal places.
- C 2. Round a mixed number to the nearest whole number.
- D 3. Put three numbers in order (through millions).
- E 4. Identify an improper fraction equal to a mixed number.
- E 5. Identify a mixed number equal to an improper fraction.
- E 6. Identify decimals & percents equal to common fractions.

COMPUTATION WITH WHOLE NUMBERS

- H 7. Multiply two 3-digit numbers.
- I 8. Divide a 5-digit number by a 2-digit number.

COMPUTATION WITH WHOLE AND MIXED NUMBERS

- J 9. Add two mixed numbers.
- J 10. Subtract a whole number and a mixed number.
- J 11. Subtract two mixed numbers.
- K 12. Multiply a whole number and mixed number.

COMPUTATION WITH DECIMALS

- M 13. Multiply two decimal numbers.
- M 14. Divide decimal numbers.

COMPUTATION WITH PERCENTS

- N 15. Multiply a whole number and a whole number percent.
- N 16. Multiply a decimal number and a percent.

PRACTICAL PROBLEMS

- T 29. Solve word problems involving averages.
- U 31. Solve word problems involving proper fractions.

STATE STUDENT ASSESSMENT TEST, PART II SKILLS

GRADE 10

State Results April 1981

APPENDIX C

LISTING OF PERCENT OF STUDENTS ACHIEVING STANDARDS AND QUARTER REPORT BY STATE AND DISTRICT

The Quarter Report included in this appendix for each district and the State provides the percents of students attaining mastery of the percent of standards specified by each of the six categories: exactly 0 percent, 0-25 percent, 26-50 percent, 51-75 percent, 76-100 percent, and exactly 100 percent. For example, if there were 16 standards measured on an SSAT-I mathematics subtest, a student mastering one of the following numbers of standards would be counted in a category as follows:

If a student mastered 0-4 standards, he or she would be included in the 0-25 category.

If a student mastered 5-8 standards, he or she would be included in the 26-50 category.

If a student mastered 9-12 standards, he or she would be included in the 51-75 category.

If a student mastered 13-16 standards, he or she would be included in the 76-100 category.

If a student mastered all of the standards, he or she would be included in the "Exactly 100 percent" column. Inversely, if a student failed to master any standards, he or she would be counted in the "Exactly 0" column.

Note: Eleventh and twelfth grade results are included in this Appendix. These results were not obtained from the total eleventh and twelfth grade population but from a limited number of students who were new to the State or who failed and are retaking the test.

APPENDIX D

LISTING OF PERCENT OF STUDENTS ACHIEVING SKILLS BY
STATE AND DISTRICT

NOTE: Twelfth grade results are included in this Appendix. These results were not obtained from the total twelfth grade population but from a limited number of twelfth graders who (1) were new to the State or (2) had failed the SSAT-II previously and were retaking the test.

GRADE: 03
