ABSTRACT

The report details the results of an annual survey conducted to determine the reasons that students at Kansas' Johnson County Community College (JCCC) drop classes. The overall JCCC attrition rate for classes starting on or before the 20th day of the fall 1999 semester was 12%. During the fall semester, students dropped 4,846 classes. The Science, Health Care, and Math Division recorded a 17% attrition rate, the highest of all the academic divisions. The Business and Technology Division recorded the lowest attrition rate (9%). Work schedule conflicts (21%) and personal problems (18%) continue to be among the reasons most frequently cited for dropping classes. Reasons over which JCCC may have some control, such as course difficulty, course scheduling, and instructors, also appeared to contribute to decisions to drop classes in a substantial number of instances. Course "too hard/bad grade" was the third most frequently cited reason for dropping a class overall (17%), and the most frequently cited reason in the Science, Health Care, and Math Division (27%). A high attrition class is defined as a class with an enrollment of 10 or more and an attrition rate of 40% or higher. Of the classes offered in the fall semester, less than 2% were high attrition classes. Appendices contain tabled findings. (JA)

APPENDICES

<i>Appendix A: Tabled Findings</i>	13
--	----

Each fall, the Office of Institutional Research conducts a survey to determine the reasons JCCC students drop classes. The survey is administered throughout the semester by the Admissions Office at the time each drop request is processed. The following report details the results of this study for the fall 1999 semester. **Only those classes that start on or before the 20th day have been considered for detailed analysis in this report.** Actual attrition rates for fall 1999 classes starting on or before the 20th day are also provided, together with tables detailing results by academic division. The comments added to the survey by the students are published separately as a supplement to this report.

Requests for the supplement of verbatim comments, as well as questions and comments pertaining to this study should be directed to:

Pat Sumner
Information Analyst, Office of Institutional Research

The overall JCCC attrition rate for classes starting on or before the 20th day of the fall 1999 semester was 12%. During the fall semester, students dropped 4,846 classes. Useable drop surveys were completed for 4,701 of those classes (97%).

The Science, Health Care, and Math Division recorded a 17% attrition rate, the highest of all the academic divisions (see Table 1). The Business and Technology Division recorded the lowest attrition rate (9%).

Figure 1
ATTRITION RATES BY DIVISION FALL 1999

REASONS FOR DROPPING A CLASS

Work schedule conflicts (21%) and *personal problems* (18%) continue to be among the reasons most frequently cited for dropping classes. Both are factors over which JCCC has little control. With the exception of the Science, Health Care and Math Division, *work schedule conflicts* was the most frequently cited reason for dropping classes in all divisions. It was a particular problem for students dropping a Business and Technology class or a Computer Instruction and Media Resources class with over 27% citing this reason (see Tables 2 and 3).

Reasons over which JCCC may have some control such as course difficulty, course scheduling, and instructors appeared to contribute to decisions to drop classes in a substantial number of instances.

- *Course too hard/bad grades* was the third most frequently cited reason for dropping a class overall (17%), and the most frequently cited reason in the Science, Health Care and Math Division (27%).
- *Bad time/inconvenient* was cited by 16% of the respondents as a factor in their decision to drop a class, but 25% of those dropping a Physical Education class cited this reason.
- Nearly 11% of students cited *did not like the instructor* as a contributing factor in their dropping a class. Less than 2% of students dropping a Physical Education Division class cited this as a reason.

Figure 2
REASONS FOR DROPPING A CLASS FALL 1999

HIGH ATTRITION CLASSES

A high attrition class is defined as a class with an enrollment of 10 or more and an attrition rate of 40% or higher. Of the classes offered in the fall semester, less than 2% were high attrition classes (see Table 4). The Science, Health Care and Math Division reported the largest percentage of high attrition classes (5%).

Course difficulty and not liking the instructor were more significant factors in students dropping a high attrition class than for dropping classes as a whole.

- *Too hard/bad grades* was cited by 29% of students dropping a high attrition class compared to 17% for students dropping classes as a whole.
- *Did not like the instructor* was cited by nearly 20% of students dropping a high attrition class compared to 11% for students dropping classes as a whole. Nearly 37% of the students dropping a Computer Instruction and Media Resources Division high attrition class cited the instructor as one of the reasons they dropped the class. (See Tables 5 and 6).

While over 64% of the high attrition classes were taught by full-time faculty, over 86% of the high attrition classes in the Science, Health Care and Math Division were taught by full-time faculty (see Table 7).

Figure 3
COMPARISON OF REASONS FOR DROPPING CLASSES FALL
1999

MONTH IN WHICH CLASSES WERE DROPPED

More than half (55%) of the classes were dropped in the month of November (the last month students were eligible to drop a class). (See Table 8).
