PROJECT HEAD START--SUMMER 1966. FINAL REPORT. SECTION TWO,
FACILITIES AND RESOURCES OF HEAD START CENTERS.

BY- BOYD, JOSEPH L.

EDUCATIONAL TESTING SERVICE, PRINCETON, N.J.

REPORT NUMBER OEO-1359-SECT-2

PUB DATE MAY 67

EDRS PRICE MF-\$0.50 HC-\$2.60 63P.

DESCRIPTORS- *STATISTICAL SURVEYS, *ENRICHMENT PROGRAMS,
PRESCHOOL CHILDREN, *COMPARATIVE ANALYSIS, *EDUCATIONAL
RESOURCES, EDUCATIONAL FACILITIES, HUMAN RESOURCES, *TABLES
(DATA), QUESTIONNAIRES, SCHOOL PERSONNEL, EDUCATIONAL
OBJECTIVES, EDUCATIONAL STRATEGIES, HEAD START, CENTER
FACILITIES AND RESOURCES INVENTORY,

THIS DOCUMENT IS SECTION 2 OF A 3-PART REPORT BY THE
EDUCATIONAL TESTING SERVICE. THE "CENTER FACILITIES AND
RESOURCES INVENTORY" WAS SENT TO THE DIRECTORS OF 630 HEAD
START CENTERS. THE INVENTORIES WERE TO BE COMPLETED AND
RETURNED TO THE SERVICE SO THAT INFORMATION DESCRIBING THE
GENERAL PHYSICAL FACILITIES AND HUMAN AND PROGRAM RESOURCES
OF HEAD START CENTERS WOULD BE AVAILABLE IN AN ORGANIZED AND
INTELLIGIBLE FORM. INVENTORIES FROM 350 CENTERS WERE
ULTIMATELY RECEIVED. THE INFORMATION IN THESE INVENTORIES WAS
REORGANIZED SO THAT ON ANY ONE CHARACTERISTIC, SUCH AS
"NUMBER OF WORKERS," A FREQUENCY DISTRIBUTION WAS DETERMINED
WHICH REFLECTED THE NUMBERS OF WORKERS IN THE VARIOUS
CENTERS. THIS DOCUMENT IS COMPOSED OF MANY SUCH FREQUENCY
DISTRIBUTION TABLES COVERING THE GENERAL TOPICAL AREAS OF (1)
HEAD START CENTER PHYSICAL FACILITIES, (2) HEAD START CENTER
HUMAN RESOURCES, AND (3) THE NATURE, ORIENTATION, AND GOALS
OF HEAD START PROGRAMS. PRESENTED WITH THE TABLES IS A BRIEF
DISCUSSION AND EXPLANATION OF THE DATA. (WD)

FINAL REPORT

Final Report under
Contract No. OEO-1359
dated June 15, 1966
between
Educational Testing Service and
The Office of Economic Opportunity

This is one of three sections of the Final Report.

The sections are:

- I. Some Characteristics of Children in the Head Start Program, by Richard H. Williams and E. Elizabeth Stewart.
- II. Facilities and Resources of Head Start Centers, by Joseph L. Boyd.
- III. Pupils and Programs, by George Temp and Scarvia B. Anderson.

Prepared by Educational Testing Service solely for submission to the United States Government under terms of Educational Testing Service contract with the United States Government acting through The Office of Economic Opportunity.

Reproduction of any part of this material, exclusive of copyrighted material, is permitted for any purpose of the United States Government.

U.S. DEPARTMENT OF HEALTH, EDUCATION & WELFARE

ACKNOWLEDGEMENTS

The author of this report wishes to acknowledge the valuable advice and cooperation of

Dr. Edmund Gordon, Director, Research and Evaluation, Project Head Start, Office of Economic Opportunity, for his guidance.

ETS staff members who provided essential advice and service in the planning and execution of this project included from Curriculum Studies: Dr. Scarvia Anderson and Dr. George Temp
Data Processing: Elaine Marikakis, Robert Stellman, and William Van Hassel

Statistical Analysis: Dr. E. Elizabeth Stewart and Dr. Richard Williams

and from Field Service: Mr. John Dobbin

The consulting services of Dr. Marshall P. Smith, Trenton State College, were most helpful in developing and carrying out the procedures for this study.

To the Head Start Center Directors, who responded to the detailed and exhaustive Inventory, I wish to express my appreciation.

BACKGROUND NOTE

The purpose of this report is to summarize data collected on behalf of the Project Head Start Research and Evaluation Division of the Office of Economic Opportunity. The data reported and discussed here were compiled on the Summer 1966 Project Head Start program under provisions of a contract between Educational Testing Service and the OEO.

This section of the report fulfills the requirement to collect data by use of the "Center Facilities and Resources Inventory," and to determine the content and nature of Head Start programs through summary and interpretation of the data. The "Center Facilities and Resources Inventory" was provided to ETS by the Research and Evaluation Division, Project Head Start. The Inventory is shown in the appendix.

INTRODUCTION

The Center Facilities and Resources Inventory, addressed to the Center Director, sought descriptive information about the physical facilities and human and program resources available to the center, as well as about the children served. The Inventory also sought information descriptive of the nature, orientation, and goals of the program.

The Inventory was mailed to directors of 630 centers identified to ETS by the Bureau of the Census. It is assumed that these 630 centers were a representative or random sample of the centers established for the Summer 1966 Project Head Start. The Inventories were mailed in August 1966 to the center addresses. Three hundred and twenty-six adequately identified Inventories were returned to ETS. There was no follow-up of non-respondents. At the time of mailing the Inventories, it was known that a number of centers had already closed after completing their programs.

In order to judge the representativeness of the 326 centers from which Inventories were returned as compared with the 630 center Census sample, each center was categorized according to region, population of location, and number of classes in center. Four regional categories were: South, West, North Central, and Northeast, as coded by the Bureau of the Census. The population of location categories were: under 30,000 population, 30,000 to 100,000 population, and more than 100,000. Six center size categories were used: 1 class, 2 classes, 3 classes, 4 classes, 5 to 18 classes, and 19 or more classes.

Each center in the Census sample of 630 and each responding center was assigned to a cell in the three dimensional pattern. Cell totals were converted to percentages. Comparisons of percentages of corresponding cells for the two samples revealed substantial correspondence of the samples. Marginal and category totals were also computed. Category totals, shown in Table 1, reveal small differences between the percentages in each category of the Census sample and the responding centers. The greatest discrepancy was in the one class centers, comprising 21.4 per cent in the Census sample and 16.3 per cent of the respondents. However, five of the 13 differences were less than one per cent and the mean discrepancy was 1.9 per cent.

This look at the 630 center Census sample and the 326 responding centers leads to the conclusion that the respondent group was not substantially biased on the basis of geographic region, population of location, or size of center.

The reports from the 326 centers discussed above were augmented by 24 reports from centers which participated in the intensive classroom study reported as another section of this project. Thus, responses from 350 Head Start Center Directors are discussed in the pages which follow.

HEAD START CENTER STAFFS

The number of paid professional staff members in a Head Start Center ranged from one person to nearly fifty. The mean number of paid professionals in the 325 centers which responded to this question was 7.8. However, the modal number of paid professionals was only 2, reported by 14.5 per cent of the centers. As would be expected, there were more teachers than any other category of paid professional worker. Centers averaged 4.7 teachers, with a maximum of 35 in one center. Fifty-four of the 350 centers (15%) had only one teacher; more centers had two teachers than any other number (24%).

Social workers were the second most frequently occurring category of paid professionals. Two hundred and thirty-six centers (of 350) reported having one or more social worker. But a third of the centers (114) did not have the services of a full-time paid social worker.

It was usual for a center to have one administrator, 204 centers so reported. The largest number of administrators was six at one center; 108 centers had no full-time administrator. In some cases, a "Head Teacher" handled administrative details; in other cases, one administrator directed several centers.

About two-thirds of the centers reported having a nurse on the staff. One hundred eighty-one centers had one nurse; one center had eight nurses. From 130 centers, the response was either "zero" or blank.

Two hundred twenty-three centers reported having paid professional staff member in other categories. The professions included

Speech Therapist

Psychologist

Counselor

Home Economist

It is clear, however, that non-professionals were sometimes included in the "other professional" group. Food service, custodial, and clerical workers were occasionally so treated.

One center reported a rather unusual type of professional worker, a "speech improvement teacher for bilinguals."

Table 2 summarizes the number of centers which had the services of various categories of unpaid staff members.

Table 2
Volunteer (Unpaid) Staff

Teen-age (Sr. and Jr. High School)	201	90
Other	48	19

Tables 3 to 17 are frequency distributions, by category, of the numbers of centers reporting various numbers of workers.

Center directors reported a mean of 14.3 children per teacher, and a mean of 6.8 children for each teacher and aide. In one center, each teacher had only three children, in another she had 29. The range of numbers of children to the combination of teachers and aides ranged from 2 to 23. However, the modal child to teacher ratio was 15, reported by 182 centers. The distribution for teachers plus aides ratio is bimodal, 63 reporting 7 to 1 ratio, 60 reporting 5 to 1. Table 18 is a frequency distribution of the child-adult ratios.

In 48.3 per cent of the centers, teachers were selected by the center directors. Local school boards selected teachers for 32.9 per cent of the centers, and Boards of Education selected for 19.4 per cent of the centers. No other agency was active in teacher selection in more than ten per cent of the centers.

Center directors were asked to consider a list of 21 statements describing qualities of teachers, and to indicate those they considered important and critical. Almost universally they agreed that teachers should "be affectionate and warm" (99%) and should "be enthusiastic" (97%). These percentages are the sums of the "important" and "critical" marks. These two qualities were also the most frequent to be marked as "critical," by 74% and 69% of the directors. All of the 21 statements of criteria for teacher selection were considered important or critical by a majority of the directors. The criteria considered critical by more than 50 per cent, in addition to those noted above, were "be interested in working with parents," "be familiar with the values and patterns of the sub-culture(s) from which the children come," and "have a thorough understanding of child development." The pattern of important and critical criteria are shown in Table 19.

One center director expressed his views on an important point regarding teachers in these words:

"The most critical need of the program is that of properly oriented teachers. We need persons trained in child development and the special needs of disadvantaged children without ignoring the formal demands made by the school on a youngster. The distinction that is critical is that Head Start is neither nursery school nor kindergarten because these are both middle-class oriented."

CHILDREN IN HEAD START CENTERS

The ages of the children served by the reporting centers ranged from less than two and a half years to more than six years. The very young children were, however, the exception; fewer than two per cent were less than four years old. Nearly two out of three (64%) were five and a half or older. There appear to be no significant differences between the age distribution of boys and girls. There were slightly fewer girls than boys—52 per cent of the 24,048 children enumerated by center directors were boys and 48 per cent were girls. The distribution of ages is shown in Table 20.

	<hr/>	

By number of centers, but not necessarily by number of children, Head Start served more in the non-urban areas than in urban areas. Nineteen per cent of the centers served children from large metropolitan (over 500,000) areas. A like percentage of centers served small city (100,000 to 500,000) areas. Of the non-urban categories, 42 per cent of the centers had farm children; 46 per cent had small town children; eight per cent served mountain communities; five per cent had migrant children. Five per cent of the centers had children in other categories.

In 41 (12%) of the centers, it was reported that none of the children spoke English. An additional 23 (7%) of the centers had some children who were non-English speakers. The vast majority of these children were Puerto Rican and Mexican Americans. The percentages of centers having children from these groups were 9 and 15 respectively.

Center directors enumerated 24,454 children as English or non-English speaking. Of these, 21,394 (95%) were English speakers, only 1,060 (5%) did not speak English.

Seventy per cent of the centers had white children; 61 per cent had Negro children. Only six per cent reported having Indian children, and only 13 centers of the 350 (4%) had children of Oriental extraction. Nineteen centers (5%) reported children of "other" ethnic or national backgrounds.

Details of linguistic and ethnic character of Head Start Centers are presented in Table 21.

Table 21
Children Served by Centers

Category*	Number of Children		Centers Having Children in Category	
	Maximum in Any Center	Total	Number	Per Cent
English Speaking	546	21394	309	88.3

Mexican-American	173	1470	53	15.1
Other	314	737	19	5.4

*Categories are not mutually exclusive.

When asked to indicate the behaviors he would be most interested in seeing in a child as a result of his program, center directors most frequently checked "participation in group activities" (93%) and "enjoying other children" (92%). In fact, of 38 statements of behavior, the majority of the directors marked 27 as appropriate educational goals of their programs. The directors strongly rejected "reading" as a goal; only six per cent agreed that it was an appropriate goal. Table 22 shows the goals in order of popularity with the numbers and percentages of those marking each goal.

Table 22

Agreement with Statements of Specific Child Behaviors

Agreement

FACILITIES AND RESOURCES OF HEAD START CENTERS

Typically, a Head Start Center was housed in a school building and used classrooms, the kitchen, and outdoor play areas. Those play areas were adjacent to classrooms and at ground level. There were both shaded and unshaded areas on the grass covered playground, which had permanent outdoor play equipment. These are the terms describing the physical facilities checked by more than 75 per cent of the center directors. As shown in Table 23, in 19 centers the school building was a parochial school. Less frequently used buildings were a church or Sunday School (15 centers), community center (6), renovated private home (4), day care center (3), housing project and store front (1 each), and other (8).

More than half of the centers (57%) had use of the nurse's room or other first-aid facility. Forty-two per cent of the centers made use of an activities room. Of the play areas, 42 per cent had open fields, 43 per cent had some blacktop, and 41 per cent had some dirt play area.

Center directors were asked to indicate which resources they were using in their programs and which they found to be their strongest program resources. While all centers had teachers, only 337 of the 350 directors indicated that they were "currently" using teachers. The wording of the instructions used the word "currently." Inasmuch as a number of directors did not receive their questionnaires until after their centers had completed their summer programs, their responses are correct, though misleading. This response bias undoubtedly permeates this portion of the data. However, these cases represent less than four per cent of the respondents.

Directors almost universally endorsed teachers and teacher aides as their strongest resources (76% and 58% respectively). Areas of less substantial agreement as being among the strongest program resources were parents (29%), volunteers (28%), community involvement (20%), recruitment (23%), cooperation of schools (47%), administration support within the center (37%), training opportunities provided (34%), library facilities (24%), materials (33%), transportation (30%), services (37%), and cultural and recreational opportunities (25%).

Parents served as volunteers in about three-quarters of the centers. Other major groups of volunteers came from the neighborhood (65%) and from among teen-agers (69%). The major focus of community involvement was the appearance of newspaper stories, reported by 70 per cent of the directors. Recruiting of children was a responsibility of teachers in 90 per cent of the centers. Volunteers and social workers were recruited for nearly two-thirds of the centers. The major media for recruiting were newspaper announcements (68%), door-to-door canvassing (63%), and brochure or newsletter to parents (60%).

The use of school buildings was reported by 92 per cent of the center directors—this verifies a similar question asked elsewhere in the inventory. Other widespread use of school resources included offices (77%) and personnel (67%). The most frequently used school system personnel were teachers. Only 31 per cent of the directors did not report using teachers from the local system, either on a paid or unpaid basis.

The majority of directors stated that there was administrative support within their centers through secretarial-clerical help (73%), professionals (59%), and sharing of delegated responsibilities among the staff (53%).

In 86 per cent of the centers, training was provided for teachers. In about half of the centers, training was on-the-job. In nearly three out of four, there were university sponsored one-week orientation sessions. Another frequently used training technique was discussion groups (58%).

In two-thirds of the centers, training was offered to parents, most often in discussion groups. Similarly, training for aides was offered in 69 per cent of the centers; and for volunteers in 55 per cent of the centers.

Libraries in the Head Start Centers were most often represented by a collection of books in the classroom (81%). About a third (34%) of the centers had a professional library. A similar percentage (35%) allowed children to take books home. Somewhat more (41%) made an effort to have books with varied ethnic character.

Montessori materials were little used (16%) while home-made and commercially available materials were used in an overwhelming number of centers (87% for both types of materials).

In three-quarters of the centers, school bus transportation was available. In half, or more, of the centers, children walked to and from centers, accompanied by an adult (59%) or older child (50%).

The numbers and percentages of center directors who reported using each of the various types of resources discussed above are given in Table 24.

Fifty-six center directors (16%) did not report using the services of a physician in their programs. The other 294 centers (84%) had a doctor either regularly or intermittently. Seventy-one per cent of the centers had a nurse, while two-thirds of the centers had the services of a social worker. Slightly less than half of the centers had the services of a clinical psychologist or child psychiatrist (49%), or a dietician or nutritionist (48%). Numbers and percentages of centers using workers in the health and social service fields are shown in Table 25.

Of the health and social services and facilities used by Head Start Centers, home visits by center staff were the most common, being reported in more than four out of five of the centers. In close second place was the provision of medical examinations (79%). The only other service or facility used by more than half of the centers was cooperation with the public health department (54%) and welfare agencies (51%). Table 26 shows the numbers and percentages of centers reporting use of each type of service or facility.

The cultural and recreational resources that were most widely used were visits to parks (77%), and visits to the center by community workers, such as policemen and firemen (67%), visits to farms (66%), to zoos (57%), and to libraries (56%). Numbers and percentages of responses are shown in Table 27.

ORIENTATION AND GOALS OF HEAD START PROGRAMS

Three sets of questions explored the orientation and goals accepted for Head Start programs by center directors. In the first set, 24 statements regarding the basic problems of disadvantaged pre-schoolers and appropriate programs for those children were presented. Directors were requested to check those statements which represented their points of view. Half of the statements were agreed to by more than half of the respondents. More than four out of five center directors agreed that

"Attention to family needs is all-important because whatever affects the family affects the child."

"The child's environment must be made friendly toward, and understanding of, the school's efforts and goals."

"A program should, first of all, take care of physical needs (feeding the children properly, providing adequate medical care, etc.)."

"The learning process in young children is largely one of interaction with other human beings."

On the other hand, only six per cent agreed that "the necessary preschool experience for disadvantaged children is predominantly academic-preparatory."

Center directors were consistent in generally agreeing (73%) that, "Because of powerful effects of environment, the deprived child is fundamentally different in language and values from the middle-class child," while generally rejecting (19% agree) the idea that "Middle-class goals and standards should be abandoned in dealing with children of the poor." At the same time two out of three agreed that, "Poor children have cultural standards and strengths of their own, which should be cultivated and exploited"; and only one out of three agreed that "'Success' for the child of the poor means being able to survive in a middle-class world."

Response patterns to statements related to curriculum orientation were rather consistent. They reveal a preference for a supportive, unstructured, socialization program rather than a structured, informational program. More than two out of three agreed with these three statements:

"A pre-school program for disadvantaged youngsters should be principally a 'get-ready' experience—time to adjust to routines and become familiar with the tools of learning before entering the formal school setting." (75%)

"The interaction between the teacher and the child provides the learning experience for the child." (71%)

"The most important ingredient of a successful program for pre-school is people." (69%)

And, substantially smaller percentages agreed with these statements implying a more rigid program:

"A pre-school program for disadvantaged pre-schoolers should be highly specialized, aiming to counteract or compensate for the child's environment." (43%)

"It is through organized and systematic stimulation, through a structured and articulated learning program that a child is best prepared for the demands of school." (36%)

"Enrichment of experience is not sufficient to enable the culturally disadvantaged child to overcome his backwardness in skills necessary for later academic success. What is necessary is selecting specific and significant educational objectives and teaching them in the most direct manner possible." (27%)

"The necessary pre-school experience for disadvantaged children is predominantly academic-preparatory." (6%)

Table 28 presents the 24 statements on program orientation and the percentage of center directors who agreed with each statement.

A number of center directors volunteered additional statements to express their views.

From Kentucky: "The teachers and aides must or should understand the disadvantaged child. They [the children] are smarter than you think you can read you."

Table 28

Agreement with Statements of Program Orientation

Center Directors
AgreeingNumber Per CentStatement

299	85.43	Attention to family needs is all-important because whatever affects the family affects the child.
285	81.43	The child's environment must be made friendly toward, and understanding of, the school's efforts and goals.
282	80.57	A program should, first of all, take care of physical needs (feeding the children properly, providing adequate medical care, etc.).
281	80.29	The learning process in young children is largely one of interaction with other human beings.
269	76.86	Successful teaching depends upon small class size and the maintaining of a low adult-to-child ratio.
264	75.43	A pre-school program for disadvantaged youngsters should be principally a "get-ready" experience — time to adjust to routines and become familiar with the tools of learning before entering the formal school setting.
263	75.14	The principal deficiency of the child from a disadvantaged background is the lack of familiarity with school-related objects and activities — books, pencils, etc. — following directions, etc.
254	72.57	Because of powerful effects of environment, the deprived child is fundamentally different in language and values from the middle-class child.
248	70.86	The interaction between the teacher and the child provides the learning experience for the child.
241	68.86	The most important ingredient of a successful program for pre-school children is <u>people</u> .
233	66.57	Poor children have cultural standards and strengths of their own, which should be cultivated and exploited.
185	52.86	Teaching materials made by the teacher, the aides, or the children are usually more effective than standard, pre-prepared materials.

Table 28 (con't.)

Center Directors
Agreeing

<u>Number</u>	<u>Per Cent</u>	<u>Statement</u>
168	48.00	A pre-school program for children from a deprived background should be principally supplementary, in terms of what the child already knows.
156	44.57	Pre-school children need learning experiences which are different from those appropriate to kindergarten children.
150	42.86	A pre-school program for disadvantaged pre-schoolers should be highly specialized, aiming to counteract or compensate for the child's environment.
127	36.29	The child of the poor, at this age, is not very different from a middle-class child of the same age.
127	36.29	It is through organized and systematic stimulation, through a structured and articulated learning program that a child is best prepared for the demands of school.
118	33.71	"Success" for the child of the poor means being able to survive in a middle-class world.
99	28.29	Structure is critical to efficient learning.
96	27.43	Enrichment of experience is not sufficient to enable the culturally disadvantaged child to overcome his backwardness in skills necessary for later academic success. What is necessary is selecting specific and significant educational objectives and teaching them in the most direct manner possible.
72	20.57	Teenagers are often more successful than the best adult teachers in teaching pre-school children with a minimum of formal instruction.
67	19.14	Middle-class goals and standards should be abandoned in dealing with the children of the poor.
22	6.29	The necessary pre-school experience for disadvantaged children is predominantly academic-preparatory.

The concern for development of adequate self-image is expressed in these statements, two from large city centers on the East and West coasts, and one from a small town in the mid-South:

"The foundation of a pre-school program is a prepared (structured) environment where the teacher functions as the mediator of the environment. The program goal is to develop in the child respect for self and others, autonomy, initiative, concentration, perception and communication skills, and a love of learning."

"The most important function of a pre-school program for any child is to create an atmosphere in which he can improve his self-image. The emphasis should be on personal experiences encouraging his curiosity and desire to learn. A sensitive teacher—aware of the needs of children this age and their capabilities—is essential."

"Provide many opportunities for the child to 'meet with success'. Do not let the child become bored. Be on the alert for the five year old who has been 'mother or father' for younger children and do not make the program too simple or childlike for them."

The second set of items, titled "Program Focus" asked center directors to indicate which of 17 phrases they found adequate to describe their programs. Three out of four directors agreed that their programs were "child-centered" (87%), "whole-child oriented" (80%), and "social-experience oriented" (75%). The only other majority agreement was to the phrase "self-concept oriented" (53%).

Reinforcing the pattern shown in the orientation statements discussed above, fewer than one-fifth of the directors felt their programs could be described as "reading-readiness oriented" (20%), "teacher-centered" (17%), "task-oriented" (15%), "Montessori" (10%), "academically-oriented" (7%), or "no-nonsense" (6%).

Table 29 shows the number and percentages of center directors who agreed with each program focus description.

Table 29
 Agreement With Statements of Program Focus

Agreement		
<u>Number</u>	<u>Per Cent</u>	
305	87.14	child-centered
279	79.71	the "whole child" oriented
261	74.57	social-experience oriented
186	53.14	self-concept-oriented
151	43.14	family centered
136	38.86	language centered
107	30.57	concept-oriented
97	27.71	mental health oriented
79	22.57	parent centered
73	20.86	materials centered
70	20.00	reading readiness-oriented
60	17.14	teacher centered
51	14.57	task-oriented
34	9.71	Montessori
26	7.43	academically-oriented
20	5.71	no-nonsense
12	3.43	other

POSTLUDE

Almost without exception, center directors were proud of the results of their programs. They felt that they had led children and parents to change in ways that were beneficial. From a north Florida center, this comment:

"Our Center, in my opinion, had one of the most successful programs for the children, teachers, aides, and parents that I could imagine in our community. We were fully integrated with teachers, aides, parents, and students, as well as administratively. We had no problems between Negroes and whites."

And from the Midwest, this poignant description:

"I would like to tell you about just one child: 4/18/60 was his birth date. [This report was August 1966, the child's age was then 6 years, 4 months.] He was over-protected and did not learn to walk until about one and a half years old. He had a back yard fence and was kept inside with no one to play with. His conversation was very limited. After eight weeks, he runs plays, talks and has improved so very much. He loved all the people involved. He does not speak plainly but he tries, and is not afraid of people. His parents are happy people. They learned too."

* "Professional" refers to those staff members with specific college or professional training for the positions they occupy in the Center.

+ All workers other than professionals. Examples are: teacher aide, cook, bus driver, janitor.

Budget Bureau No. 116 RO 60; Approval expires Sept. 15, 1966

1. Type of quarters occupied by Center: Check (✓) all applicable items

- school building
- church or Sunday school
- parochial school building
- community center
- renovated private house
- housing project
- store front
- day care center
- other (Specify) _____

2. Type of spaces used in the program: Check (✓) all applicable items.

- classrooms only
- kitchen
- activities room
- parent's room
- nurses's room or other first-aid facility
- gymnasium
- outdoor play area
- other (Specify) _____

3. Outdoor play area: Check (✓)

- is on top of a building
- is adjacent to classroom at ground level
- is nearby (requires a walk)
- has open fields
- has sun and shade areas
- has trees suitable for climbing
- other (Specify) _____

4. Principal surfaces of outdoor play area are: Check (✓)

- blacktop
- concrete
- dirt
- grass
- sand
- other (Specify) _____

5. Outdoor equipment is: Check (✓)

- stationary
- portable

6. The teachers in the Center were selected by: Check (✓)

- Center Director
- local school board
- poverty council
- parents' council
- curriculum director
- Board of Health
- Board of Education
- Social Service agency
- other (Specify) _____

7. Ages of children served by the Center: (Please indicate number of boys and number of girls for each age category.)

0 - 5 months	No. boys	<input type="text"/>	<input type="text"/>	<input type="text"/>	No. girls	<input type="text"/>	<input type="text"/>	<input type="text"/>

10. RESOURCES

Following is a list of resources often utilized in Head Start program. Place a check (✓) beside any which you are currently utilizing. PLACE A DOUBLE CHECK BESIDE THOSE HEADINGS WHICH YOU SEE AS YOUR STRONGEST PROGRAM RESOURCES

a. Teachers

b. Teacher aides

c. Parents, as

- volunteers
- paid workers
- teacher aides
- other (specify) _____
- policy board
- advisory board
- field trip supervisors
- curriculum planning body
- other (Specify) _____

d. volunteers

- neighborhood
- VISTA
- teen-agers (Jr. and Sr. High School level)
- college and university students
- social and/or philanthropic organizations
- scout troops, 4-H and other youth groups
- professionals (volunteering their professional skills)
- Voluntarily unemployed (retired persons, wives, financially independent individuals)
- Involuntarily unemployed individuals (persons who have not been able to find work)
- other (Specify) _____

e. community involvement

- participation of community leaders (civil rights, community action, political, etc.)
- organized participation of neighborhood people
- unorganized participation of neighborhood people
- coordination with other community projects (NYC, Job Corps, etc.)
- TV coverage
- Radio coverage
- Newspaper stories
- social services provided by community organizations volunteering aid
- church groups
- other religious groups
- lodges
- military posts
- teen-age clubs
- school groups
- fraternities and sororities
- neighborhood school

f. recruitment by

- teachers
- volunteers
- social workers
- institutions (Specify) _____

- door to door canvassing
- welfare lists, etc.
- radio announcements
- TV announcements
- newspaper announcements
- brochure, newsletter to individual parents
- loud speaker truck
- other (Specify) _____

g. cooperation of schools through :

PAID

UNPAID

- use of buildings
- use of offices
- use of personnel
- local Board of Education involvement
- county Board of Education involvement
- teachers from school system
- curriculum supervisors
- consultants from school system
- coordinators of programs in the schools

h. administrative support within Center

- secretarial, clerical
- professional
- sharing of delegated responsibilities among staff
- other (Specify) _____

i. training opportunities provided

- for teachers
- on-the-job
- by supervisors
- by consultants
- university-sponsored eight-week training sessions
- university-sponsored one-week orientation session
- lectures by specialists
- discussion groups
- other (Specify) _____

RESOURCES (CON'T)

Place a check beside any resource you are currently utilizing. PLACE A DOUBLE CHECK BESIDE THOSE HEADINGS WHICH YOU SEE AS YOUR STRONGEST PROGRAM RESOURCES.

_____ for parents
 _____ on-the-job
 _____ by supervisors
 _____ by consultants
 _____ university-sponsored eight-week training sessions
 _____ university-sponsored one-week orientation session
 _____ lectures by specialists
 _____ discussion groups
 _____ other (Specify) _____

_____ for volunteers
 _____ on-the-job
 _____ by supervisors
 _____ by consultants
 _____ university-sponsored eight-week training sessions
 _____ university-sponsored one-week orientation session
 _____ lectures by specialists
 _____ discussion groups
 _____ other (Specify) _____

_____ for aides
 _____ on-the-job
 _____ by supervisors
 _____ by consultants
 _____ university-sponsored eight-week training sessions
 _____ university-sponsored one-week orientation session
 _____ lectures by specialists
 _____ discussion groups
 _____ other (Specify) _____

j. library facilities

_____ classroom libraries
 _____ professional library
 _____ other (Specify) _____
 _____ books for children to take home
 _____ books with varied ethnic characters

k. materials

_____ Montessori materials
 _____ "home-made" materials (Made by teachers, aides, mothers, etc.)
 _____ commercially available materials

l. transportation, by

_____ car pools
 _____ school bus
 _____ taxi
 _____ walking, accompanied by a adult
 _____ parent
 _____ volunteer
 _____ walking, accompanied by older child

Place a check (✓) beside any resource you are currently utilizing. (PLACE A DOUBLE CHECK BESIDE THOSE HEADINGS WHICH YOU SEE AS YOUR STRONGEST PROGRAM RESOURCES)

visits to Center by neighborhood tradesmen (carpenter, cook, etc.)
 other (Specify) _____

11. CRITERIA FOR TEACHER SELECTION

Following are some criteria which have been mentioned by directors of child development programs as being important in selecting teachers. Please place a check (✓) beside those you consider important in a teacher. (PLACE A DOUBLE CHECK BESIDE THOSE YOU CONSIDER CRITICAL.)

A good teacher should:

- have training in work with the poor
 have experience in work with the poor
 have training in work with nursery school-age children
 have experience in work with nursery school-age children
 have experience in work with deprived youngsters
 be enthusiastic
 be informed
 be able to handle discipline problems without getting flustered
 be uninhibited
 be certified
 be familiar with the values and patterns of the sub-culture(s) from which the children come
 be affectionate and warm
 be interested in working with parents
 be able to manage without much supervision
 speak the language of the child
 be well-adjusted
 be firm, but gentle
 be good at making do with materials at hand
 be flexible enough to be retrained
 be able to utilize supervision well
 have a thorough understanding of child development
 other (Specify) _____

12. ORIENTATION

The following are some statements which directors of child development programs have made in an attempt to communicate 1) their understanding of the basic problems of disadvantaged pre-schoolers, and 2) their feelings regarding appropriate programs for these children. Please place a check (✓) beside statements which represent your orientation. If none of these represent your point of view, or if you wish to add to or qualify some points, please feel free to elaborate in the space provided at the end of this section.

_____ The child of the poor, at this age, is not very different from a middle class child of the same age.

_____ The principal deficiency of the child from a disadvantaged background is the lack of familiarity with school-related objects and activities -- books, pencils, etc. -- following directions, etc.

_____ Because of powerful effects of environment, the deprived child is fundamentally different in language and values from the middle-class child.

_____ Attention to family needs is all-important because whatever affects the family affects the child.

_____ Pre-school children need learning experience which are different from those appropriate to kindergarten children.

_____ The child's environment must be made friendly toward, and understanding of, the schools' efforts and goals.

_____ "Success" for the child of the poor means being able to survive in a middle-class world.

_____ The learning process in young children is largely one of interaction with other human beings.

_____ Poor children have cultural standards and strengths of their own, which should be cultivated and exploited.

_____ The interaction between the teacher and the child provides the learning experience for the child.

_____ Middle-class goals and standards should be abandoned in dealing with the children of the poor.

_____ A program should, first of all, take care of physical needs (feeding the children properly, providing adequate medical care, etc.)

_____ Successful teaching depends upon small class size and the maintaining of a low adult-to-child ratio.

_____ Teenagers are often more successful than the best adult teachers in teaching pre-school children with a minimum of formal instruction.

_____ The most important ingredient of a successful program for pre-school children is people.

_____ Teaching materials made by the teacher, the aides, or the children are usually more effective than standard, pre-prepared materials.

_____ Structure is critical to efficient learning.

_____ Enrichment of experience is not sufficient to enable the culturally disadvantaged child to overcome his backwardness in skills necessary for later academic success. What is necessary is selecting specific and significant educational objectives and teaching them in the most direct manner possible.

_____ A pre-school program for disadvantaged pre-schoolers should be highly specialized, aiming to counteract or compensate for the child's environment.

_____ The necessary pre-school experience for disadvantaged children is predominantly academic-preparatory.

_____ A pre-school program for children from a deprived background should be principally supplementary, in terms of what the child already knows.

_____ It is through organized and systematic stimulation, through a structured and articulated learning program that a child is best prepared for the demands of school.

_____ A pre-school program for disadvantaged youngsters should be principally a "get-ready" experience -- time to adjust to routines and become familiar with the tools of learning before entering the formal school setting.

_____ Other (Specify) _____

13. PROGRAM FOCUS

The following are some terms which have been used by directors to characterize their programs. Please check (✓) any which you find adequate to describe your program, or add a more appropriate term below.

- _____ parent centered
- _____ child centered
- _____ family centered
- _____ teacher centered
- _____ materials centered
- _____ task-oriented
- _____ no-nonsense
- _____ mental health oriented
- _____ Montessori
- _____ language centered
- _____ social-experience oriented
- _____ concept-oriented
- _____ academically-oriented
- _____ reading readiness-oriented
- _____ self-concept-oriented
- _____ the "whole child" oriented
- _____ other (Specify) _____

14. EDUCATIONAL GOALS

If a visitor were to observe a child who had participated in your program, which items of the following would you be most interested in seeing him observe as the result of your program (assuming ideal results, of course)

- _____ participation in group activities
- _____ trust of adults
- _____ familiarity with books, paper, crayons, pencils, etc.
- _____ observing safety habits
- _____ going to the toilet alone
- _____ tidiness
- _____ handling books carefully
- _____ enjoying stories
- _____ standing up for his own rights
- _____ reading
- _____ speaking more
- _____ solving problems
- _____ using what he knows more effectively
- _____ thinking logically
- _____ speaking clearly
- _____ identifying cause-effect relationships
- _____ enjoying other children
- _____ accepting new people without fear
- _____ taking turns
- _____ feeling secure in a school situation
- _____ caring for and picking up materials
- _____ following directions
- _____ putting on and taking off his own wraps
- _____ completing a task before starting another
- _____ observing good health practices
- _____ relying on verbal communication more than on gesture
- _____ working and playing cooperatively
- _____ respecting the right of others
- _____ sharing ideas and materials
- _____ using good table manners
- _____ working independently
- _____ leading effectively
- _____ following effectively
- _____ accepting group decisions
- _____ expressing his negative feelings
- _____ expressing his positive feelings
- _____ being confident of himself
- _____ accepting authority
