The Role Of The Palestinian Media In Supporting The Values Among The Adolescents In Gaza Governorates

Abstract: This study aimed to investigate the role of the Palestinian media to support moral, social, economic and political values among adolescents in Gaza Governorates insight the gender. This study depends on the analytical

descriptive method, by use a questionnaire includes (56) items were distributed into four fields act as the basic values. Palestinian Media are expected to do an important role to support these values of the adolescents in Gaza Governorates. These items talk about the moral, social, economic and political values. This questionnaire is applied on a random sample contains of (1122) students who represent (5%) of the original population of the current study which has (22464) students of secondary schools.

The Results:

- 1- The Palestinian media supporting the values among adolescents were arranged descending as: the political value was the highest (81.90%), followed by moral values (81.02%), followed by social values (77.45%), where the last value was the economic at (76.11%).
- 2- There is a positive significant correlation at 0.01 between the fields of values which supported by the Palestinian Media among the adolescents of general secondary students in Gaza Governorates.
- 3- The study shows that there are statistical differences in favor to female in the efficiency of the Palestinian Media in supporting the moral, economic and political values among the adolescents of general secondary students in Gaza Governorates. While the study shows that there are no statistics differences due to gender in supporting the social values by The Palestinian Media.
