Abstract

The Palestinian governmental units are facing many internal and external challenges at the present time, such as the rapid changes in the internal and external environment in which these units operate including the various methods of decision- making. They also became involved in more sophisticated governmental agencies and more conservative legislative powers, especially, in approving the funds required by such governmental units.

In the light of such challenges, it has become necessary for the Palestinian governmental units to develop a clear and a comprehensive methodology in order to develop their performance in the various fields. One of the most important fields is developing the method of preparing the budget in order to steer the economy in a way to distribute the resources efficiently and to control the government spending.

Also, it helps the officials in these units to carry out their managerial responsibilities such as planning, organizing, directing, controlling and making sound decisions in a timely manner since they are in need to use some specific tools, method and procedures to help them perform their duties. Perhaps, one of the most important tools is the financial budgets. In fact, it is considered as a comprehensive tool that is used to help the officials to financially plan and coordinate all of the activities.

The budgets are considered a scientific method and a comprehensive system that is used to coordinate all of the activities covered by the administration in order to ensure the proper performance of any section in a way to achieve its objectives. Thus, the need to develop the Palestinian governmental accounting system has aroused by implementing a very advanced method for preparing the country's general budget.

Therefore, this study is investigating the Palestinian governmental accounting system and the possibility of making proposals to develop it and to ensure its capacity building and the development of the employees in these governmental units. It also studies the ways to measure the costs of the implemented governmental activities in order to know its output in the different fields. Moreover, it could benefit the governmental system by using the best tools for the distribution of resources and for the rationalization of government spending.

This study aims at showing the necessity of moving from using the traditional method to the programmed method of making the general budget for the Palestinian governmental units. It also tackles the shift from the cash basis in the accounting measure to the accrual basis in the Palestinian governmental units, in order to develop the Palestinian Accounting System and to improve the Palestinian governmental units' performance.
